4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest | 11 | 12 | 1 | LOW

Back | 15 | 14 | -1 | OK

Shoulders | 12 | 10 | -2 | OK

Traps | 9 | 6 | -3 | OK

Rear Delts | 7 | 8 | 1 | LOW

Biceps | 9 | 8 | -1 | OK

Triceps | 6 | 8 | 2 | LOW

Legs | 27 | 14 | -13 | OK

Core | 12 | 6 | -6 | OK

Push sets: 29 | Pull sets: 40 | Ratio pull:push = 1.38 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 9 sets this week (need 6+/week)

OK.

Enough work this week: Back, Shoulders, Traps, Biceps, Legs, Core

Short this week : Chest, Rear Delts, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (12 Apr-19 Apr): 7 sessions

Wk -2 (19 Apr-26 Apr): 5 sessions

Wk -1 (26 Apr-03 May): 5 sessions

Time between sessions this week:

Mon 04 May 08:00 -> Tue 05 May 08:30: 25h

Tue 05 May 08:30 -> Wed 06 May 07:48: 23h

Wed 06 May 07:48 -> Fri 08 May 08:44: 49h

Fri 08 May 08:44 -> Sat 09 May 08:34: 24h [FLAG: only 24h rest, same muscles: back, biceps]

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Fri 08 May + Sat 09 May (24h apart): overlap = back, biceps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	11	8	OK
Back	15	10	OK
Shoulders	12	8	OK
Traps	9	4	OK
Rear Delts	7	6	OK
Biceps	9	6	OK
Triceps	6	6	OK
Legs	27	10	OK
Core	12	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 31 May 2026

7. KEY INSIGHTS

RECOVERY AT 44

At 44, muscle tissue takes 48-72 hours to rebuild between sessions hitting

the same group. This week, Fri 08 May and Sat 09 May were only 24 hours apart -- and both sessions loaded the back (lat pulldown Friday, trap bar deadlift Saturday) and biceps. Training a muscle before it has recovered adds fatigue without adding stimulus and raises injury risk. The other gaps this week were acceptable: Mon->Tue (23h, different muscle groups: pull vs push), Wed->Fri (49h, adequate). The Fri->Sat back overlap is the single structural problem to solve next week -- consider shifting the trap bar deadlift to Monday or pairing Sat Lower with leg-only work.

REAR DELT AND TRAP GAP

When the muscles that push your arms forward (anterior deltoids, pectorals) are significantly stronger than those that pull them back (rear deltoids, rotator cuff), the shoulder sits too far forward in the socket. Over time this causes impingement and rotator cuff tears -- a particular risk after 40. This week rear delts got 7 sets against a target of 8, short by 1. Traps are healthy at 9 sets (target 6). The pull:push ratio of 1.38 is balanced overall, but rear delts specifically need one extra face pull or reverse fly every week. This gap has persisted for multiple weeks -- it must be built into the session plan, not treated as optional.

RED FLAGS THIS WEEK

1. 0kg logged for Pull Ups, Sissy Squat (Weighted), and Dead Bug. These are bodyweight exercises, but logging 0kg makes progress impossible to track. Log your bodyweight (87kg) as the load so the system can calculate e1RM and detect improvement.
2. Seated Leg Curl dropped from 36kg to 29kg within the same session (Set 3). This mid-session weight crash means the muscle hit failure earlier than expected -- likely because the 7.4kg jump from the prior session (11 Apr) was too aggressive. Hold all 3 sets at 36kg next session before going heavier.
3. Fri 08 May + Sat 09 May only 24h apart with back and biceps loaded both days. Lateral Raise (Machine) also showed rep collapse (9 -> 6 in set 3), suggesting fatigue was accumulating across the Friday session itself.

OVERALL TREND

Volume this week: 40,120 kg*reps -- down 4% from 41,924 last week and well below the 47,614 peak three weeks ago. The 4-week arc is contracting: 47,614 -> 38,997 -> 41,924 -> 40,120. However, key compound lifts are moving well -- trap bar deadlift hit a 30-day e1RM high of 117.0kg, chest press is climbing (+2.0kg), rear delt fly jumped +6.7kg. Volume is plateauing but strength density is improving. For body recomposition, this is the correct pattern -- but the volume contraction should not continue into next week. Aim to recover to 42,000+ kg*reps.

8. PLAN FOR NEXT WEEK (12 May - 17 May 2026)

Priority fixes:

- [1] Add 1 extra set of rear delts in Mon Pull session (total 4 Face Pulls)
