4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		3		12		9		CRITICAL
Back		9		14		5		CRITICAL
Shoulders		7		10		3		LOW
Traps		3		6		3		LOW
Rear Delts		3		8		5		CRITICAL
Biceps		6		8		2		LOW
Triceps		3		8		5		CRITICAL
Legs		12		14		2		LOW
Core		12		6		-6		OK

Push sets: 13 | Pull sets: 21 | Ratio pull:push = 1.62 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much

stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 3 sets this week (need 6+/week)

SHORT by 3 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Enough work this week: Core

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target

Wk -3 (06 May-13 May): 7 sessions

Wk -2 (13 May-20 May): 6 sessions

Wk -1 (20 May-27 May): 2 sessions

Time between sessions this week:

Wed 27 May 08:37 -> Thu 28 May 07:55: 23h [FLAG: only 23h rest, same muscles: back, core, other]

Thu 28 May 07:55 -> Mon 01 Jun 07:08: 95h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Wed 27 May + Thu 28 May (23h apart): overlap = back, core, other

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	3	8	AT RISK
Back	9	10	AT RISK
Shoulders	7	8	AT RISK
Traps	3	4	AT RISK
Rear Delts	3	6	AT RISK
Biceps	6	6	OK

Triceps 3 6 AT RISK
 Legs 12 10 OK
 Core 12 4 OK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Triceps

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 24 Jun 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week : W2 (started 2026-05-24; 9 days elapsed, rounded up)

Sessions this week: 3 of 6 target

Day	Expected	Detected	Status
* +-----+-----+-----+			
Wed 27 May	Legs A	Legs A	OK
Thu 28 May	Push B	Push B	OK
Fri 29 May	Pull B	(no session)	MISSED
Sat 30 May	Legs B	(no session)	MISSED
Sun 31 May	REST	REST	OK
Mon 01 Jun	Push A	Full Body 1 (INFERRED: mixed)	OFF-PLAN
Tue 02 Jun	Pull A	(no session)	MISSED

Adherence: 67% (2 of 3 logged sessions matched expected day type)

3 of 6 planned training days had no session logged at all.

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 1 legs sessions -- MISSING on Wed 27 May

(Glute Bridge and Clamshell were logged as warm-up but Hip Thrust absent)

Core stabiliser (all sessions): 2 of 3 sessions

(Bird Dog + Dead Bug present Wed 27 May and Thu 28 May; absent Mon 01 Jun)

Rear delt work in Pull sessions: 0 of 0 Pull sessions this week

(No dedicated Pull session completed; Face Pull appeared in Push B Thu 28 May

= 3 sets total vs 8-set weekly target; 5 sets short)

Sessions over 60 min: ALL THREE sessions exceeded the 60-min target

Wed 27 May Legs A : 122 min (62 min over)

Thu 28 May Push B : 103 min (43 min over)

Mon 01 Jun Full Body : 70 min (10 min over)

LATERAL RAISE (V-TAPER KPI):

This week : 10kg x 15 reps | Prior week: 10kg x 12 reps | Trend: UP

e1RM this week: 15.0kg | e1RM prior week: 14.0kg (+1.0kg week-on-week)

Note: 30-day peak = 12.5kg x 13 reps (e1RM 17.9kg, 05 May) -- gap to close.

7. KEY INSIGHTS

RECOVERY AT 44:

The only problematic session pair this week is Wednesday 27 May (Legs A) and Thursday 28 May (Push B), separated by just 23 hours. Both sessions hit the back (Trap bar Deadlift in Legs A, Upright Row in Push B) and core (Dead Bug + Side Plank in Legs A, Bird Dog in Push B). The 48-hour minimum for these muscle groups was not respected. At 44, training spinal erectors and core stabilisers on incomplete recovery accumulates fatigue without adding stimulus * and raises soft-tissue injury risk disproportionately compared to a 25-year-old. The Thu 28 May to Mon 01 Jun gap (95 hours) was fine. All other muscle pairings this week cleared the minimum. One offender: Wed to Thu back-to-back.

PPL ADHERENCE AND PROGRAMME AGE:

This is Week 2 of the PPL x2 programme (started 2026-05-24). Of the 6 planned training days this reporting week, only 3 were completed (50% completion). Of those 3 sessions, 2 matched the correct PPL type -- Wednesday Legs A and Thursday Push B were executed correctly. The third session (Monday 01 June) was logged as "Full Body 1" rather than the scheduled Push A, a structural breakdown only seven days into the programme. More concerning: Friday Pull B, Saturday Legs B, and Tuesday Pull A were all skipped entirely. The dropout is concentrating at the back end of the week (Fri and Sat) and at the start of Week 2 (Tue). If Fridays continue to be dropped, rear delt volume will never reach the 8-set weekly target and the corrective shoulder work will remain chronically short. The Wed and Thu sessions are the strongest anchors right now.

CORRECTIVE COMPLIANCE:

Hip Thrust hit rate this week: 0 of 1 Legs sessions (0%). The Legs A session on 27 May included Glute Bridge and Clamshell as warm-ups but no Hip Thrust whatsoever. The Hip Thrust trains the posterior pelvic tilters (glutes) under axial load -- this is the direct counter-stimulus to the hip flexor dominance driving the Anterior Pelvic Tilt (APT). A Glute Bridge is a useful activation exercise but it does not replace the Hip Thrust as a strength movement; the loading is too low to generate the posterior pelvic tilt stimulus needed for correction. Core stabiliser presence: 2 of 3 sessions (67%) -- present in Legs A and Push B, absent in the Full Body session. Rear delt count this week: 3 sets vs the 8-set weekly target (5 sets short). All 3 rear delt sets came from one Face Pull exercise in Push B -- no Pull session was completed. At 44, weak rear delts allow the anterior deltoid and pec minor to pull the humeral head forward in the shoulder socket under pressing load. This places the supraspinatus tendon in a compressed position under the acromion arch. Repeated over months of heavy pressing with imbalanced anterior/posterior delt strength, this is the primary mechanism behind rotator cuff impingement and tears in men training in their 40s.

Closing the rear delt gap is not optional -- it is an injury prevention deadline.

LATERAL RAISE TREND -- V-TAPER KPI:

Prior week (Mon 25 May, Push A): 10kg x 12 reps, e1RM 14.0kg. This week (Thu 28 May, Push B): 10kg x 15 reps, e1RM 15.0kg. Week-on-week trend: UP (+3 reps at the same weight, +1.0kg e1RM). Positive direction. Context: the 30-day best was 12.5kg x 13 reps (e1RM 17.9kg, 05 May) -- the current work is a conservative PPL reset at 10kg, 2.9kg e1RM below the recent peak. This matters specifically because Ganesh's love handles currently sit at lat-width level, collapsing the visual V-taper. Widening the effective shoulder silhouette through sustained Lateral Raise progression is the fastest lever to restore the waist-to-shoulder ratio without requiring the fat loss to do all the work alone. Every week the Lateral Raise e1RM goes up is a week the taper improves.

HARD FLAGS:

1. Rep collapse -- Bench Press (Barbell), Mon 01 Jun: sets ran 12, 12, 8 at 40kg. Third set dropped 4 reps. Full Body format likely pre-fatigued the pushing musculature (squat loading the stabilisers) before the bench sets.
2. Data entry error -- Overhead Triceps Extension, Thu 28 May: Set 1 logged as 111 reps at 24kg (clearly a mis-entry; Sets 2 and 3 correctly show 11 reps). Fix this entry in Hevy before next Push B session, otherwise the script will keep flagging false rep collapse on this exercise.
3. All 3 sessions exceeded the 60-minute ceiling: 122 min, 103 min, 70 min. Sessions running 100+ minutes significantly elevate cortisol output and impair overnight recovery -- this is especially pronounced at 44 where testosterone-to-cortisol ratios are already narrower. Session structure needs trimming, not content reduction.
4. Hip Thrust absent from Legs A on 27 May -- APT corrective missed entirely.
5. Wed 27 May to Thu 28 May: 23h rest between sessions with overlapping back and core load. Minimum required: 48h.

OVERALL VERDICT: IMPROVING

Session count up from 2 (prior week) to 3. Volume up 45% (16,458 vs 11,330 kg*reps). Two sessions executed correctly to the PPL template. Lateral Raise trending up week-on-week. However: all 3 sessions ran over the 60-min ceiling, the Hip Thrust was missed in the only Legs session, rear delt volume sits at 3 of 8 required sets, and Monday's session broke from the PPL structure. The improvement in volume and session count is real but the corrective compliance has not kept pace. The programme is gaining traction in the right direction -- it needs the Fri/Sat sessions and the Hip Thrust to actually land.

8. PLAN FOR NEXT WEEK

 * V-TAPER KPI -- track this number every session ***

Corrective: Bird Dog 3 x 10 -- do not skip (T8-T12 kyphosis reset)
 Dead Bug 3 x 10 -- do not skip

Focus: First Bench set at 42.5kg -- stop at exactly 8 reps on all 4 sets.
 Consistency across sets is the progression signal; do not push to failure.

TUESDAY 09 JUN -- Pull A (Back + Biceps)

Pull Up (Weighted) 4 x 9 @ BW (0kg)
 base: 0kg x 8 x 4 (Tue 26 May -- all hit); add 1 rep per set

 Seated Incline Curl (Dumbbell) 3 x 10 @ 8.75kg
 base: 7.5kg x 10 x 2 (Tue 26 May -- all hit); +1.25kg

Corrective: Dead Bug 3 x 10 -- do not skip
 Bird Dog 3 x 10 -- do not skip

Focus: Face Pull (3 sets) + Y Raise (3 sets) = 6 rear delt sets in this session alone. Essential to start closing the 8-set/week rear delt deficit.

WEDNESDAY 10 JUN -- Legs A (Quads + Hamstrings + Glutes)

HIP THRUST (Machine) 3 x 12 @ 22.5kg *** MANDATORY -- DO NOT SKIP
 base: 20kg x 13 x 3 (Wed 13 May -- all hit); +2.5kg

Hip Thrust was ABSENT from Legs A on 27 May -- must be first main exercise

Deadlift (Trap bar) 3 x 8 @ 95kg

Corrective: Dead Bug 3 x 10 -- do not skip (kyphosis; do AFTER Hip Thrust)

Bird Dog 3 x 10 -- do not skip

Focus: Hip Thrust goes in immediately after warm-up. APT correction requires posterior pelvic loading under resistance -- Glute Bridge does not substitute.

THURSDAY 11 JUN -- Push B (Shoulders + Chest variation + Triceps)

Seated Overhead Press (Dumbbell) 4 x 10 @ 20kg

base: 17.5kg x 10 x 4 (Thu 28 May -- all hit); +2.5kg

Lateral Raise (Dumbbell) 3 x 15 @ 11.25kg

base: 10kg x 15 x 3 (Thu 28 May -- all hit); isolation +1.25kg

* V-TAPER KPI -- log carefully ***

Upright Row (Cable) 3 x 10 @ 20.6kg

base: 18.1kg x 10 x 3 (Thu 28 May -- all hit); +2.5kg

Face Pull 3 x 15 @ 26.15kg

base: 24.9kg x 15 x 3 (Thu 28 May -- all hit); +1.25kg

Chest Supported Y Raise (DB) 3 x 12 @ 6.25kg

base: 5kg x 12 x 3 (Thu 28 May -- all hit); +1.25kg

NOTE: Set 1 on 28 May was logged 111 reps -- fix that data entry error first.

Corrective: Dead Bug 3 x 10 -- do not skip

Bird Dog 3 x 10 -- do not skip

Focus: OHP moving to 20kg is the key compound marker. If Set 3 or 4 shows rep collapse at 20kg, drop back to 17.5kg for one more cycle -- do not grind.

FRIDAY 12 JUN -- Pull B (Back + Rear Delts + Biceps)

Seated Cable Row - V Grip 3 x 10 @ 79.5kg

base: 77kg x 10 x 3 (Mon 18 May -- all hit); +2.5kg

Pull Up 4 x 8 @ BW (0kg)

maintain; fresh 48h+ recovery after Tuesday Pull A

Face Pull 3 x 15 @ 26.15kg *** MANDATORY REAR DELT

Rear Delt Reverse Fly (Machine) 4 x 12 @ 51.25kg

base: 50kg x 11 x 4 (Thu 14 May -- all hit); isolation +1.25kg

Focus: Face Pull (3 sets) + Rear Delt Fly (4 sets) = 7 rear delt sets here.
 Combined with Tuesday's 6 sets, weekly rear delt total clears the 8-set target.
 THIS SESSION MUST NOT BE SKIPPED ON FRIDAYS -- the rear delt gap is an injury risk accumulator at 44. Treat it as non-negotiable.

SATURDAY 13 JUN -- Legs B (Glutes + Hamstrings + Single-Leg + Rack Pull)

HIP THRUST (Machine) 4 x 12 @ 22.5kg *** MANDATORY -- DO NOT SKIP

(72h recovery from Wednesday Legs A Hip Thrust at 22.5kg -- hold weight, build volume from 3 to 4 sets before progressing load next week)

Deadlift (Trap bar) 3 x 8 @ 95kg

72h recovery from Wednesday; maintain weight; focus on form

Rack Pull 3 x 8 @ 52.5kg

base: 50kg x 8 x 2 (Tue 26 May -- consistent sets hit); +2.5kg

Seated Leg Curl (Machine) 3 x 10 @ 44.25kg

same progression as Legs A

Single Leg Press (Machine) 3 x 10 @ 20kg

start real loading after 0kg logged last session

Corrective: Dead Bug 3 x 10 -- do not skip

Bird Dog 3 x 10 -- do not skip

Focus: Hip Thrust is the reason this session is distinct from Legs A -- 4 sets minimum. Both Legs sessions must carry Hip Thrust from here forward; APT will not correct without consistent posterior pelvic loading twice weekly.
