4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		7		12		5		CRITICAL
Back		10		14		4		CRITICAL
Shoulders		7		10		3		LOW
Traps		10		6		-4		OK
Rear Delts		3		8		5		CRITICAL
Biceps		6		8		2		LOW
Triceps		3		8		5		CRITICAL
Legs		9		14		5		CRITICAL
Core		9		6		-3		OK

Push sets: 17 | Pull sets: 29 | Ratio pull:push = 1.71 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 10 sets this week (need 6+/week)

OK.

Enough work this week: Traps, Core

Short this week : Chest, Back, Shoulders, Rear Delts, Biceps, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 4 of 5 target

Wk -3 (24 Apr-01 May): 6 sessions

Wk -2 (01 May-08 May): 5 sessions

Wk -1 (08 May-15 May): 6 sessions

Time between sessions this week:

Fri 15 May 08:52 -> Sat 16 May 10:11: 25h

Sat 16 May 10:11 -> Mon 18 May 08:28: 46h

Mon 18 May 08:28 -> Tue 19 May 08:43: 24h

No sessions after midnight IST this week. Good.

No back-to-back same-muscle sessions this week. Good.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	7	8	AT RISK
Back	10	10	OK
Shoulders	7	8	AT RISK
Traps	10	4	OK
Rear Delts	3	6	AT RISK
Biceps	6	6	OK
Triceps	3	6	AT RISK
Legs	9	10	AT RISK
Core	9	4	OK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Shoulders, Rear Delts, Triceps, Legs

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 12 Jun 2026

7. KEY INSIGHTS

RECOVERY AT 44

At this age, testosterone and cortisol recovery from heavy compound work takes 48-72 hours for the same muscle group. This week the tightest gaps were Fri 15 May (Lower) -> Sat 16 May (Push) at 25h, and Mon 18 May (Pull) -> Tue 19 May (Push) at 24h. Because the muscle groups rotated correctly (lower -> push, pull -> push), these short gaps are acceptable -- no same-muscle back-to-back occurred. However, chronically training under 48h of total rest (i.e. < 2 rest days per week) will erode performance at 44; the current 4-session week with adequate rest is actually healthier than the 6-session weeks in prior 30 days.

REAR DELT vs TRAP IMBALANCE -- SHOULDER HEALTH RISK

The front shoulder (anterior delt) is trained through every push session:

7 sets this week. The rear delt received only 3 sets (Face Pulls, 24.9kg).

When anterior delts are significantly stronger than posterior, the shoulder internally rotates forward -- this over-stresses the rotator cuff tendons and is a common source of impingement in people over 40. Currently front-to-rear ratio is 7:3 where it should be closer to 1:1. The Drona "Upper Body" sessions

include Rear Delt Reverse Fly (4 sets), which was missed this week -- that single session absence accounts for most of the deficit. This must not slip.

RED FLAGS THIS WEEK

- 1. Session 4 (Tue 19 May): Only 1 set logged in a 78-minute session.
Shoulder Press 20kg x 10 x 1. A 78-minute gym visit producing 1 working set is either an injury abort, a tracking failure, or both. This needs clarification before next Push session.
- 2. Triceps Pushdown e1RM dropped -44.8kg vs 08 May (37.2kg vs 82.0kg).
This is almost certainly a different cable stack at Cult vs Drona -- 27.2kg at Cult does not equal 60kg at Drona. Track which gym for this exercise or compare Cult-only vs Drona-only to avoid false alarms.
- 3. Volume crashed 53% week-on-week (25,376 vs 54,497 kg*reps). Even accounting for the 4-session week, per-session volume also dropped.
The prior 3-week average was 47,686 kg*reps; this week is well below.

OVERALL TREND

This is the first full report, so no prior report to compare. Within the 30-day log, strength on key lifts is trending positively -- Trap Bar Deadlift has moved from e1RM 106.7kg (25 Apr) to 123.5kg (15 May), a +16.8kg gain in 3 weeks. Seated Cable Row: +9.4kg over the period. These are real strength gains. The concern is this week's volume dip and the muscle-group gaps (Chest, Triceps, Rear Delts, Legs all below minimum stimulus). If volume recovers next week the trend remains positive.

- 8. PLAN FOR NEXT WEEK (22-28 May 2026)
TARGET: 5 sessions. Prioritise Chest, Triceps, Rear Delts, Legs -- all below minimum stimulus this week. Clarify Session 4 abort before next Push.
