4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group	Sets this wk	Target/wk	Gap	Status
Chest	11	12	1	LOW
Back	16	14	-2	OK
Shoulders	12	10	-2	OK
Traps	9	6	-3	OK
Rear Delts	7	8	1	LOW
Biceps	9	8	-1	OK
Triceps	6	8	2	LOW
Legs	27	14	-13	OK
Core	12	6	-6	OK

Push sets: 29 | Pull sets: 41 | Ratio pull:push = 1.41 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 9 sets this week (need 6+/week)

OK.

Enough work this week: Back, Shoulders, Traps, Biceps, Legs, Core

Short this week : Chest, Rear Delts, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (15 Apr-22 Apr): 7 sessions

Wk -2 (22 Apr-29 Apr): 5 sessions

Wk -1 (29 Apr-06 May): 5 sessions

Time between sessions this week:

Wed 06 May 07:48 -> Fri 08 May 08:44: 49h

Fri 08 May 08:44 -> Sat 09 May 08:34: 24h [FLAG: only 24h rest, same muscles: back, biceps]

Sat 09 May 08:34 -> Mon 11 May 08:26: 48h

Mon 11 May 08:26 -> Tue 12 May 08:15: 24h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Fri 08 May + Sat 09 May (24h apart): overlap = back, biceps

Sat 09 May + Mon 11 May (48h apart): overlap = back, biceps, core, traps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	11	8	OK
Back	16	10	OK
Shoulders	12	8	OK
Traps	9	4	OK
Rear Delts	7	6	OK
Biceps	9	6	OK
Triceps	6	6	OK
Legs	27	10	OK
Core	12	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 03 Jun 2026

7. KEY INSIGHTS

RECOVERY AT 44

At 44, muscle tissue needs 48-72h between sessions targeting the same group to complete the repair-and-grow cycle. This week you hit Fri 08 May (Upper/back) then Sat 09 May (Lower/back) only 24h apart -- back and biceps were still being repaired when the second session started. Then Mon 11 May (Pull) to Tue 12 May (Push) was another 24h gap. Two of the four rest windows this week were shorter than the minimum 48h. The result is accumulated fatigue rather than new stimulus; over time this raises injury risk and slows strength gains.

REAR DELTS AND SHOULDER HEALTH

When the chest and front shoulders significantly outpace the rear delts, the humeral head migrates forward in the socket. That imbalance loads the rotator cuff tendons in a compromised position, which is the most common cause of shoulder impingement in gym-goers over 40. This week rear delts reached only 7 sets vs the 8-set weekly minimum, while the front-of-body push muscles (chest + shoulders) accumulated 29 sets. The gap is small but consistent: rear delts have been the most persistently underfunded muscle group across the 30-day log.

RED FLAGS THIS WEEK

1. Triceps Pushdown weight crash: 60kg on Fri 08 May -> 27.2kg on Tue 12 May (same exercise name, different machine). This likely reflects two different pieces of equipment logged under the same name. Clarify in Hevy -- create separate exercise entries for the cable stack vs the dumbbell/attachment variant so e1RM history stays meaningful.
2. Back-to-back same-muscle sessions: Fri->Sat (24h, back/biceps overlap) and Mon->Tue (24h) both broke the 48h recovery rule.
3. Seated Leg Curl and Cable Crunch weight drops mid-session (36->29kg and 35->30kg): indicates fatigue accumulation within the session -- likely from training too close to the previous day's work.
4. Lateral Raise (Machine) rep collapse: 9 reps -> 6 reps within one session, suggesting 35kg is above the working-weight ceiling for consistency. Either reduce to 30kg or treat this as a pure top-set exercise, not a volume set.

OVERALL TREND

This is the first formal report, but the 4-week volume log provides a trend. Volume has held remarkably steady: 44,991 -> 39,743 -> 42,453 -> 40,647 kg*reps over the past four weeks. Consistency at 5 sessions/week is excellent. Strength is moving in the right direction on nearly every compound lift -- Deadlift (Trap bar) up from e1RM 104kg (18 Apr) to 117kg (09 May), Leg Press up from e1RM 68kg to 93kg, Seated Cable Row debuted at 93kg and already at 100kg e1RM. The trend is positive. The sole structural concern is the recurring 24h inter-session gap on weekends and at the Mon->Tue boundary.
