4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group	Sets this wk	Target/wk	Gap	Status
Chest	11	12	1	LOW
Back	12	14	2	LOW
Shoulders	9	10	1	LOW
Traps	10	6	-4	OK
Rear Delts	7	8	1	LOW
Biceps	6	8	2	LOW
Triceps	6	8	2	LOW
Legs	21	14	-7	OK
Core	12	6	-6	OK

Push sets: 26 | Pull sets: 35 | Ratio pull:push = 1.35 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 10 sets this week (need 6+/week)
 OK.

Enough work this week: Traps, Legs, Core

Short this week : Chest, Back, Shoulders, Rear Delts, Biceps, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (08 Apr-15 Apr): 4 sessions

Wk -2 (15 Apr-22 Apr): 5 sessions

Wk -1 (22 Apr-29 Apr): 5 sessions

Time between sessions this week:

Wed 29 Apr 08:32 -> Fri 01 May 08:20: 48h

Fri 01 May 08:20 -> Sat 02 May 08:25: 24h

Sat 02 May 08:25 -> Mon 04 May 08:00: 48h

Mon 04 May 08:00 -> Tue 05 May 08:30: 25h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Fri 01 May + Sat 02 May (24h apart): overlap = back

Sat 02 May + Mon 04 May (48h apart): overlap = back, core, traps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
-----	-----	-----	-----
Chest	11	8	OK
Back	12	10	OK
Shoulders	9	8	OK
Traps	10	4	OK
Rear Delts	7	6	OK
Biceps	6	6	OK
Triceps	6	6	OK
Legs	21	10	OK
Core	12	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 27 May 2026

7. KEY INSIGHTS

Recovery at 44:

At 44, muscle tissue repairs more slowly -- research consistently shows 48-72h between sessions targeting the same muscle group. This week had two problem gaps: Fri 01 May + Sat 02 May was only 24h apart with overlapping back work, and Mon 04 May + Tue 05 May was 25h apart (also back). Training a muscle that has not yet repaired adds accumulated fatigue, not strength stimulus, and raises injury risk. Back was already the biggest muscle gap (12 of 14 target sets) -- working it again before recovery compounds the deficit.

Rear Delt and Trap Gap:

Rear delts hit 7 sets this week against a target of 8+. Traps are well ahead at 10 sets vs a target of 6. The concern is balance: chest (11 sets) and front shoulder (part of 9 sets) are strong, but if rear delts stay significantly weaker than the muscles pressing in front of the shoulder joint, the rotator cuff is pulled forward out of alignment. Over months, this causes impingement and pain. Currently the rear delt deficit is 1 set -- manageable, but the trend needs watching. Add a 4th set of Face Pulls or Reverse Fly every Pull day.

Red Flags This Week:

1. Deadlift (Trap bar) rep collapse: jumped from 80kgx12 to 90kgx8 (30% weight increase in one step). Rep drop signals the weight was too aggressive. Hold at 90kg and rebuild reps to 10-12 before adding weight.
2. Pull Up + Dead Bug logged as 0kg: Pull-ups are bodyweight -- the 0kg entry inflates set counts but makes e1RM tracking impossible. Log bodyweight (79kg) as the load, or note bodyweight in the title.
3. Same-muscle sessions within 24-25h (Fri/Sat back overlap, Mon/Tue): see Recovery note above. Reschedule to ensure 48h minimum for back and posterior chain.

Overall Trend:

Strongly positive. Volume has risen four consecutive weeks: 23,194 -> 34,725 -> 39,743 -> 42,453 kg*reps (+83% in 4 weeks). Session count is holding at 5/5. The main risk now is accumulating fatigue from compressed recovery windows rather than lack of effort.
