4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		12		12		0		OK
Back		13		14		1		LOW
Shoulders		10		10		0		OK
Traps		6		6		0		OK
Rear Delts		9		8		-1		OK
Biceps		5		8		3		LOW
Triceps		6		8		2		LOW
Legs		9		14		5		CRITICAL
Core		9		6		-3		OK

Push sets: 28 | Pull sets: 33 | Ratio pull:push = 1.18 (OK -- balanced)

Rear delts: 9 sets this week (need 8+/week)

OK -- shoulder balance maintained.

Traps : 6 sets this week (need 6+/week)

OK.

Enough work this week: Chest, Shoulders, Traps, Rear Delts, Core

Short this week : Back, Biceps, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 4 of 5 target

Wk -3 (03 May-10 May): 7 sessions

Wk -2 (10 May-17 May): 6 sessions

Wk -1 (17 May-24 May): 2 sessions

Time between sessions this week:

Mon 25 May 08:12 -> Tue 26 May 10:14: 26h

Tue 26 May 10:14 -> Wed 27 May 08:37: 22h [FLAG: only 22h rest, same muscles: back, biceps, other, traps]

Wed 27 May 08:37 -> Thu 28 May 07:55: 23h [FLAG: only 23h rest, same muscles: back, core, other]

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Mon 25 May + Tue 26 May (26h apart): overlap = chest, other, rear_delts

Tue 26 May + Wed 27 May (22h apart): overlap = back, biceps, other, traps

Wed 27 May + Thu 28 May (23h apart): overlap = back, core, other

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	12	8	OK
Back	13	10	OK
Shoulders	10	8	OK
Traps	6	4	OK
Rear Delts	9	6	OK
Biceps	5	6	AT RISK
Triceps	6	6	OK
Legs	9	10	AT RISK
Core	9	4	OK

Muscles at risk of loss this week (below minimum stimulus):

Biceps, Legs

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 21 Jun 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week: W1 (started 2026-05-24; 7 days elapsed = Week 1)

Sessions this week: 4 of 6 target

Day	Expected	Detected	Status
* +-----+-----+-----			
Mon 25 May	Push A	Push A	OK
Tue 26 May	Pull A	Pull A	OK
Wed 27 May	Legs A	Legs A	OK
Thu 28 May	Push B	Push B	OK
Fri 29 May	Pull B	MISSED	--
Sat 30 May	Legs B	MISSED	--

Adherence: 100% (4 of 4 completed sessions matched correct day)

Session completion: 67% (4 of 6 target sessions attempted)

Pattern: Sessions drop off mid-week; both trailing sessions (Fri, Sat) skipped.

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 1 -- MISSING on Wed 27 May [APT CRITICAL]

(Glute Bridge at 0kg was logged -- insufficient substitute for loaded Hip Thrust)

Core stabiliser (all sessions): 4 of 4 -- OK (Bird Dog present in all 4 sessions;

Dead Bug in Legs A; Side Plank in Legs A)

Rear delt work in Pull sessions: 1 of 1 -- OK (Face Pull 24.9kg x 15 x 3 in Pull A)

Sessions over 60 min: ALL 4 sessions exceeded 60-minute target

Mon 25 May Push A : 84 min (+24 min over)

Tue 26 May Pull A : 118 min (+58 min over)

Wed 27 May Legs A : 122 min (+62 min over)

Thu 28 May Push B : 103 min (+43 min over)

LATERAL RAISE (V-TAPER KPI):

This week : 10kg x 15 | Prior week : 12.5kg x 13 (Sat 16 May, last pre-PPL session)

Trend: DOWN (-2.5kg weight at programme switch; prior 7-day window 17-23 May had no Lateral Raise sessions)

7. KEY INSIGHTS

RECOVERY AT 44

All four sessions this week ran on consecutive mornings: Mon 25, Tue 26, Wed 27, Thu 28 May. The Mon-Tue gap was 26 hours; Tue-Wed was 22 hours; Wed-Thu was 23 hours. Not a single pair cleared the 48-hour minimum required for proper tissue repair at 44. The worst offender was the Tue-Wed pair (22h), where the Trap bar Deadlift appeared in both Pull A and Legs A -- back and trap fibres got less than a full day between heavy compound loads. At this age, training fatigued tissue produces accumulated fatigue without adaptive stimulus, and elevates soft-tissue injury risk. Sessions must be scheduled with at least 48h between same-muscle pairings; the PPL structure already provides

this if all 6 sessions are spread Mon-Sat -- the problem is compressing 4 sessions into 4 consecutive days rather than pacing them across the week.

PPL ADHERENCE AND PROGRAMME AGE

This is Week 1 of the PPL x2 programme (started 2026-05-24). Four of six target sessions were completed (67% session completion), but every session that was attempted landed on exactly the correct programme day -- 100% day-adherence on sessions done. The missing pattern is consistent: Mon through Thu were hit, then Pull B (Friday) and Legs B (Saturday) were skipped. If this trailing drop-off repeats in Week 2, Biceps will remain chronically short (5 sets this week vs 8 target), Legs will stay at critical deficit (9 sets vs 14 target), and the rear-delt balance built early in the week will erode without the Friday reinforcement. Week 1 shows the right intent; the habit of finishing the week needs to be built now, not later.

CORRECTIVE COMPLIANCE

Hip Thrust was completely absent from the sole Legs session of the week (Legs A, Wed 27 May). A Glute Bridge at 0kg was logged but is not a substitute -- the loaded Hip Thrust machine provides the hip extension range and glute force needed to reverse anterior pelvic tilt (APT). With APT unaddressed, the lower back compensates during all lower-body lifts, accelerating lumbar fatigue and blunting quad and hamstring development. Rear delt coverage was good: Face Pull at 24.9kg x 15 reps appeared in Pull A, giving 3 sets toward the 8-set weekly target; however, with Pull B missed on Friday, total rear delt sets this week stand at 9 (just above the 8 minimum). Core stabilisers (Bird Dog, Dead Bug, Side Plank) were present in all 4 sessions -- 4 of 4 -- the one corrective area where compliance was perfect.

LATERAL RAISE TREND -- V-TAPER KPI

The V-taper KPI is moving DOWN. In the final week of the previous programme (session ending 16 May), Lateral Raise (Dumbbell) best set was 12.5kg x 13 reps. This week it was 10kg x 15 reps -- weight regressed by 2.5kg at the programme switch. Ganesh's love handles sit at lat-width level, which means the visual shoulder-to-waist ratio currently appears flat. The only way to visibly improve that ratio without surgery is to grow the lateral deltoid -- and that growth is directly driven by progressive Lateral Raise overload. Holding at 10kg for more than one consecutive week is a red line; next session must attempt 12.5kg.

HARD FLAGS

Overhead Triceps Extension (Thu 28 May, Set 1): 24kg x 111 reps logged -- obvious data entry error; actual performance was 11 reps per set (Sets 2 and 3 confirm). The Heavy log needs to be corrected manually; the inflated volume figure is distorting e1RM calculations for this lift.

Rack Pull (Tue 26 May): First set at 70kg x 5 reps, then weight dropped to 50kg x 8 for Sets 2 and 3 -- a 28.6% intra-session drop. This indicates either the 70kg start was beyond controlled-form capacity or rack height needs adjusting. Do not permit mid-session weight drops; set the rack at the correct height before starting and hold 70kg x 5 reps for all three sets next week.

Single Leg Press (Wed 27 May): All three sets logged at 0kg. The weight used was not entered.

Identify

the actual load used and log it retrospectively; otherwise progression tracking is impossible for this exercise.

Session duration: All four sessions ran 43-62 minutes over the 60-minute target. At 118-122 minutes, the sessions exceed the time frame where cortisol elevation becomes counterproductive for body recomposition. The culprit is multi-set stretching blocks (up to 7 Stretching entries per session) and double Warm Up entries. These should be capped to a single 5-minute block before main work.

OVERALL VERDICT: IMPROVING

Volume tripled from the prior two-session week (8,025 kg*reps) to 23,436 kg*reps this week. Session count doubled from 2 to 4, and PPL day-adherence was 100% on sessions attempted. However, the improvement has a ceiling: all sessions blew past the 60-minute target, Hip Thrust was missed in the only Legs session, the V-taper KPI dropped 2.5kg, and consecutive sessions left 22-26h recovery gaps instead of 48h+. The framework is now in place; Week 2 must close out all 6 sessions, enforce 60-minute limits, and put the Hip Thrust back where it belongs.

8. PLAN FOR NEXT WEEK

Programme week: W2 (Week 2 of PPL x2)

Dates: Mon 01 Jun -- Sat 06 Jun 2026

[+2.5kg from 70kg if microplates available; otherwise 75kg]

Face Pull 3 x 15 @ 26.25kg

[+1.25kg: 24.9kg x 15 hit on all 3 sets]

[add missing 3rd set; same weight]

Chest Supported Y Raise (Dumbbell) 3 x 12 @ 6.25kg

[+1.25kg from 5kg]

Bird Dog 3 x 16 -- do not skip

Key focus: 118 min last session. Target under 60 min. If time is running short, drop Y Raise and Rack Pull last; protect Pull Up, Row, Face Pull, and Curl as the core Pull A exercises.

WEDNESDAY -- Legs A (Quads, Hamstrings, Glutes)

***** HIP THRUST IS MANDATORY -- DO NOT LEAVE THE GYM WITHOUT LOGGING IT *****

Hip Thrust (Machine) 3 x 12 @ 22.5kg

[MANDATORY APT corrective -- was MISSED entirely on Wed 27 May; last loaded = 20kg x 13 on 13 May; progress to 22.5kg; do this immediately after warm-up so it cannot be skipped]

Deadlift (Trap bar) 3 x 8 @ 97.5kg

[+2.5kg: 95kg x 8 hit on final 2 working sets Wed 27 May]

Leg Press (Machine) 3 x 12 @ 72.5kg

[+1.25kg from 43kg; round to 45kg on most cable-stack machines]

Dead Bug 3 x 16 -- do not skip [T8-T12 corrective]

Key focus: 122 min last session -- worst of the week. Target 60 min. Log Hip Thrust first.

Cut all mid-session Stretching entries to a single 2-min cool-down at the end.

THURSDAY -- Push B (Shoulders + Chest variation + Triceps)

Seated Overhead Press (Dumbbell) 4 x 10 @ 20kg

[+2.5kg: 17.5kg x 10 hit on all 4 sets Thu 28 May]

Lateral Raise (Dumbbell) 3 x 15 @ 12.5kg

[V-TAPER KPI -- 10kg x 15 hit last Thursday; attempt 12.5kg x 12+ reps]

Upright Row (Cable) 3 x 10 @ 20.6kg

[+2.5kg from 18.1kg; cable stack nearest to 20.6kg is likely 20.4kg or 22.7kg]

Face Pull 3 x 15 @ 26.25kg

[+1.25kg: 24.9kg x 15 hit on all 3 sets]

Overhead Triceps Extension (Cable) 3 x 12 @ 24kg

[HOLD weight; Set 1 last session was logged as 111 reps -- data entry error, actual was 11 reps; target 12 reps this session; fix the Hevy log entry for Thu 28 May]

[+1.25kg from 5kg]

Bird Dog 3 x 16 -- do not skip

Key focus: 103 min last session. Target 60 min. Lateral Raise and Overhead Press are the two

primary strength KPIs for Push B -- protect time for them above all accessories.

FRIDAY -- Pull B (Back + Rear Delts + Biceps)

- * Face Pull is MANDATORY (rear delt balance, rotator cuff protection) ***
- * This session was MISSED last week -- it must happen this Friday ***

Pull Up (Weighted) 4 x 8 @ 2.5kg

[match Tuesday's progression]

Dumbbell Row 3 x 12 @ 22.5kg

[match Tuesday's progression]

Rear Delt Reverse Fly (Machine) 4 x 10 @ 50kg

[last logged 14 May at 50kg x 11 x 4 sets; hold weight; this is the rear delt volume session]

Face Pull 3 x 15 @ 26.25kg

[MANDATORY rear delt -- if skipped, front-to-rear delt imbalance widens; at 44 this raises rotator cuff impingement risk as front delts continue to outpace rear delts]

Seated Incline Curl (Dumbbell) 3 x 10 @ 7.5kg

[biceps only at 5 sets this week vs 8 target -- these 3 sets are essential]

Bird Dog 3 x 16 -- do not skip

Key focus: This session defines whether Week 2 closes out properly. Biceps need 3 more sets to hit the weekly minimum. Rear delts need 7 more sets (only 9 so far after Thursday Face Pulls).

Show up and complete the session.

SATURDAY -- Legs B (Glutes, Hamstrings, Single-Leg, Rack Pull)

*** HIP THRUST IS MANDATORY ***

- * This session was MISSED last week -- Legs are at critical volume deficit (9 of 14 sets) ***

Hip Thrust (Machine) 3 x 12 @ 22.5kg

[MANDATORY APT corrective -- do this immediately after warm-up]

Romanian Deadlift (Dumbbell) 3 x 10 @ 42.5kg

[+2.5kg from 40kg; last logged 13 May at 40kg x 11 reps]

Rack Pull 3 x 5 @ 70kg

[hold at 70kg for all 3 sets -- no intra-session drops]

Single Leg Press (Machine) 3 x 10 @ 20kg

[conservative start -- match Wednesday]

Seated Leg Curl (Machine) 3 x 9 @ 44.25kg

[+1.25kg from 43kg -- match Wednesday progression]

Dead Bug 3 x 16 -- do not skip [T8-T12 corrective]

Key focus: Legs are the most under-trained muscle group this week. This session closes the gap.

Hip Thrust must be logged before you leave. Target 60 min.
