4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest	3	12	9	CRITICAL
Back	8	14	6	CRITICAL
Shoulders	6	10	4	CRITICAL
Traps	0	6	6	CRITICAL
Rear Delts	3	8	5	CRITICAL
Biceps	6	8	2	LOW
Triceps	3	8	5	CRITICAL
Legs	13	14	1	LOW
Core	0	6	6	CRITICAL

Push sets: 12 | Pull sets: 17 | Ratio pull:push = 1.42 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 0 sets this week (need 6+/week)

SHORT by 6 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core
 Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target

Wk -3 (01 Aug-08 Aug): 2 sessions

Wk -2 (08 Aug-15 Aug): 3 sessions

Wk -1 (15 Aug-22 Aug): 1 sessions

Time between sessions this week:

Mon 24 Aug 10:40 -> Wed 26 Aug 08:24: 46h

Wed 26 Aug 08:24 -> Fri 28 Aug 11:03: 51h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Mon 24 Aug + Wed 26 Aug (46h apart): overlap = legs, shoulders

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	3	8	AT RISK
Back	8	10	AT RISK
Shoulders	6	8	AT RISK
Traps	0	4	AT RISK
Rear Delts	3	6	AT RISK
Biceps	6	6	OK
Triceps	3	6	AT RISK
Legs	13	10	OK
Core	0	4	AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Triceps, Core

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 7

Weeks since last deload : 7 (deload every 4 weeks)

*** DELOAD THIS WEEK ***

Cut all sets to 2 per exercise. Keep weights the same.

Deload weeks let joints and connective tissue recover.

You will come back stronger after the deload.

7. KEY INSIGHTS

RECOVERY AT 44:

shoulders. All future Full Body A/B pairings need at least 48h between them.

PPL ADHERENCE AND PROGRAMME AGE:

This is Week 14 of the PPL x2 programme (started 24 May 2026). Three of 6 target sessions were completed -- 50% of the session count target. More critically, all 3 sessions were labelled "Full Body A/B/C", not the Push/Pull/Legs split the programme prescribes. PPL type adherence = 0% for the week: not one session matched its assigned muscle focus for that day. The persistent missed days pattern holds: Tuesday (Pull A) and Thursday (Push B) have been the most consistently skipped days, and Saturday (Legs B) has rarely been completed across the 14 weeks. After 14 programme weeks the prescribed split has never been run as designed.

CORRECTIVE COMPLIANCE:

Hip Thrust hit rate: 0 of 3 sessions -- CRITICAL. No Hip Thrust logged in any session this week. Because no dedicated Legs A or Legs B session was run, the APT-corrective Hip Thrust was never triggered. The anterior pelvic tilt that loads the lumbar spine remains uncorrected. Without posterior chain dominance through Hip Thrust, the pelvis tilts forward under load, compressing the lumbar facets and tightening the hip flexors further -- a worsening cycle, not a stable one.

Rear delt sets: 3 this week vs the 8-set weekly target, 5 sets short. Only Friday's Full Body C included any rear delt work -- and 2 of 3 logged sets were 0kg (invalid). Effective rear delt sets = 1. At 44, if the anterior and medial deltoids remain disproportionately stronger than the posterior deltoids, the humeral head migrates forward in the glenoid socket under pressing loads. That misalignment frays the supraspinatus tendon over time, eventually producing rotator cuff tendinopathy or impingement. The older the lifter, the less regenerative reserve the cuff has. 8 rear delt sets per week is a structural protection target, not a cosmetic one.

Core stabiliser presence: 0 of 3 sessions -- CRITICAL. No Dead Bug, Bird-Dog, or Plank appeared in any session this week. The lower thoracic kyphosis at T8-T12 requires active deep stabiliser recruitment (transverse abdominis and multifidus) every session to counter the postural default. Without it, the kyphosis load remains on passive structures -- discs and ligaments -- rather than muscle. That is how a posture issue becomes a chronic pain issue.

LATERAL RAISE TREND:

Lateral raise is stuck at 10kg for at least 30 days. This week: 10kg x 15 reps (Monday only -- absent from Wednesday and Friday). Prior week (Aug 15-21) had zero lateral raise logged. The nearest prior data point is Mon 10 Aug: 10kg x 14 reps -- same weight, one fewer rep. Weight has not moved in a month. This matters specifically because Ganesh's love handles currently sit at the same width as his lats, collapsing the visual V-taper. The V-taper improvement from body recomposition is driven almost entirely by shoulder cap width relative to waist width; lateral raise weight is the single best proxy for that cap. Stuck at 10kg means zero V-taper progress.

HARD FLAGS:

1. Fri 28 Aug: session duration logged as 8 minutes for 4 exercises and 11 working sets. Minimum rest time alone (90s per set x 11 sets) is ~17 minutes. This is either a Hevy app logging error (workout stopped and restarted) or a session that was halted mid-way. If halted, the 3 working sets logged per exercise may be incomplete efforts.
2. Pull Up: 0kg logged in all three appearances this week (Mon 24 Aug) and across the 30-day log (03 Aug, 10 Aug, 24 Aug). Bodyweight reps must be logged at actual bodyweight so e1RM tracks correctly. At 0kg the lifts are invisible to all progress metrics.
3. Rear Delt Reverse Fly on Fri 28 Aug: Set 1 logged at 10kg; Sets 2 and 3 at 0kg. Two of three sets are invalid -- down-weight, equipment issue, or early set end. Only 1 effective set was recorded. This is also why the report flags a -1.0kg e1RM drop vs prior: the average is dragged down by the 0kg entries.
4. Mon 24 to Wed 26: 46h shoulder-group overlap -- 2h short of the 48h minimum. Discussed above under Recovery.

OVERALL VERDICT: HOLDING

Volume bounced hard from the prior week's anomaly (1 session, 5,056 kg*reps) to 13,704 kg*reps this week (+171%), but that is a rebound from an outlier, not a trend improvement. The average of the prior 3 weeks was 2 sessions and ~9,000 kg*reps; this week's 3 sessions is only marginally above that average. The structural problems are unchanged: Full Body format instead of PPL, 0% corrective exercise compliance, lateral raise stuck at 10kg for 30 days, 3 of 6 sessions completed, Tuesday/Thursday consistently skipped. Verdict: HOLDING.

8. PLAN FOR NEXT WEEK

Programme week: W15 (Week 15 of PPL x2) -- DELOAD WEEK

7 weeks of training logged without a deload; deload is overdue.

Deload rule: 2 sets per exercise, same weights as this week. No PRs.

All sessions 6-9 PM IST.

MONDAY -- Push A (Chest + Shoulders + Triceps)

Bench Press (Barbell) 2 x 8 @ 60kg

Overhead Press (Barbell) 2 x 7 @ 45kg

Lateral Raise (Dumbbell) 2 x 15 @ 10kg

Triceps Pushdown 2 x 11 @ 27.2kg

Dead Bug 2 x 10 -- do not skip (T8-T12 kyphosis reset)

Key focus: treat this as a movement quality session; keep scapulae retracted throughout the bench, and monitor bar path. Deload sets should feel easy -- that is the point.

TUESDAY -- Pull A (Back + Biceps)

Bent Over Row (Barbell) 2 x 8 @ 70kg

Lat Pulldown (Machine) 2 x 6 @ 66kg

Pull Up 2 x 6 @ bodyweight (log your actual bodyweight as the
load -- stop logging 0kg; at ~87kg, e1RM = ~103kg)
Bicep Curl (Barbell) 2 x 10 @ 20kg
Dead Bug 2 x 10 -- do not skip
Key focus: fix the Pull Up logging issue today; start tracking it properly so
the exercise contributes to progress metrics.

WEDNESDAY -- Legs A (Quads, Hamstrings, Glutes)
Hip Thrust (Barbell) 2 x 10 @ 60kg [MANDATORY -- APT correction]
Squat (Barbell) 2 x 6 @ 70kg
Leg Extension (Machine) 2 x 9 @ 77kg
Seated Leg Curl (Machine) 2 x 9 @ 43kg
Dead Bug 2 x 10 -- do not skip
Key focus: Hip Thrust goes FIRST after warm-up so it cannot be bumped if time
runs short. 60kg is a conservative start weight -- adjust on feel.

THURSDAY -- Push B (Shoulders primary + Chest variation + Triceps)
Overhead Press (Barbell) 2 x 7 @ 45kg
Lateral Raise (Dumbbell) 2 x 15 @ 10kg
Bench Press (Barbell) 2 x 8 @ 60kg (chest variation -- shoulders led first)
Triceps Pushdown 2 x 11 @ 27.2kg
Bird-Dog 2 x 10/side -- do not skip
Key focus: OHP before bench to lead with the session's primary muscle group;
watch for forward elbow drift on OHP -- early sign of tight lats limiting lockout.

FRIDAY -- Pull B (Back + Rear Delts + Biceps)
Bent Over Row (Barbell) 2 x 8 @ 70kg
Lat Pulldown (Machine) 2 x 6 @ 66kg
Rear Delt Reverse Fly (DB) 2 x 10 @ 10kg [MANDATORY -- rear delt protection]
Bicep Curl (Barbell) 2 x 10 @ 20kg
Bird-Dog 2 x 10/side -- do not skip
Key focus: fix the 0kg error from Fri 28 Aug; both sets must be logged at 10kg.
If 10kg does not allow 10 controlled reps, drop to 8kg and rebuild from there.

SATURDAY -- Legs B (Glutes, Hamstrings, Single-Leg, Rack Pull)
Hip Thrust (Barbell) 2 x 10 @ 60kg [MANDATORY -- APT correction]
Romanian Deadlift (Barbell) 2 x 8 @ 75kg
Leg Press (Machine) 2 x 12 @ 50kg
Seated Leg Curl (Machine) 2 x 9 @ 43kg
Dead Bug 2 x 10 -- do not skip
Key focus: Saturday is the most-missed day of the week across all 14 programme
weeks. Hip Thrust alone makes the trip worth it -- treat this session as the
most important of the week, not the most skippable.
