4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		9		12		3		LOW
Back		14		14		0		OK
Shoulders		6		10		4		CRITICAL
Traps		7		6		-1		OK
Rear Delts		3		8		5		CRITICAL
Biceps		3		8		5		CRITICAL
Triceps		3		8		5		CRITICAL
Legs		11		14		3		LOW
Core		2		6		4		CRITICAL

Push sets: 18 | Pull sets: 27 | Ratio pull:push = 1.50 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 7 sets this week (need 6+/week)

OK.

Enough work this week: Back, Traps

Short this week : Chest, Shoulders, Rear Delts, Biceps, Triceps, Legs, Core

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target

Wk -3 (17 May-24 May): 4 sessions

Wk -2 (24 May-31 May): 4 sessions

Wk -1 (31 May-07 Jun): 3 sessions

Time between sessions this week:

Mon 08 Jun 08:13 -> Wed 10 Jun 08:27: 48h

Wed 10 Jun 08:27 -> Fri 12 Jun 08:20: 48h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Wed 10 Jun + Fri 12 Jun (48h apart): overlap = back, other, traps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	9	8	OK
Back	14	10	OK
Shoulders	6	8	AT RISK
Traps	7	4	OK
Rear Delts	3	6	AT RISK
Biceps	3	6	AT RISK
Triceps	3	6	AT RISK
Legs	11	10	OK
Core	2	4	AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Shoulders, Rear Delts, Biceps, Triceps, Core

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 05 Jul 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week: W3 (started 2026-05-24; 20 days elapsed, rounded up = Week 3)

Sessions this week: 3 of 6 target

Day	Expected	Detected	Status
* +-----+-----+-----+-----			
Mon 08 Jun	Push A	INFERRED: Full Body (Squat + Bench + Pull Up + Lat Raise)	WRONG -- Full Body, not Push A; leg work present
Tue 09 Jun	Pull A	No session logged	MISSED
Wed 10 Jun	Legs A	INFERRED: Full Body (RDL + OHP + Leg Ext + Curl + Tric.)	WRONG -- Full Body, not Legs A; no Hip Thrust
Thu 11 Jun	Push B	No session logged	MISSED
Fri 12 Jun	Pull B	INFERRED: Pull-dominant (Bent Row + Deadlift + Rear Delt)	PARTIAL -- Pull elements present & rear delt done; contaminated w/ Push sets
Sat 13 Jun	Legs B	No session logged	MISSED

Adherence: 0% (0 of 3 sessions matched their PPL day type; Fri was Pull-adjacent

but not a dedicated Pull B -- no bicep work, 2 push exercises mixed in.

3 of 6 scheduled slots were not attended at all.)

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 2 planned Legs sessions -- MISSING BOTH

(Wed was Full Body with no Hip Thrust; Sat Legs B was not attended)

Core stabiliser (all sessions): 0 of 3 sessions -- Dead Bug / Bird Dog absent

in every session this week. T8-T12 kyphosis corrective completely skipped.

Rear delt work in Pull sessions: 1 of 1 actual Pull-type session -- OK

(Fri had Rear Delt Reverse Fly 7.5kg x 15 x 3; only 3 sets total vs 8 target)

Sessions over 60 min: ALL 3 sessions exceeded 60-min limit

Mon 08 Jun: 71 min (+11 min over)

Wed 10 Jun: 65 min (+5 min over)

Fri 12 Jun: 70 min (+10 min over)

LATERAL RAISE (V-TAPER KPI):

This week : 10kg x 12 reps (Mon 08 Jun)

Prior week: Not logged (no Lateral Raise in any session 31 May-06 Jun)

Last logged prior: 10kg x 15 reps (Thu 28 May, Push B) | Trend: DOWN

(Weight also down from 12.5kg x 13 on 16 May -- declining over 4 weeks)

7. KEY INSIGHTS

RECOVERY AT 44

Mon 08 Jun (08:13) to Wed 10 Jun (08:27) = 48h 14min -- Back cleared the minimum, just barely. Wed 10 Jun (08:27) to Fri 12 Jun (08:20) = 47h 53min -- the Back + Traps group (RDL on Wed; Bent Row + Deadlift on Fri) came in 7 minutes SHORT of the 48h floor. Every pair in this Full Body format is within minutes of the minimum, with no margin for a later-than-usual start. At 44 the ideal window for back and compound muscles is 72h; at 48h these muscles are structurally repaired but neurologically still fatigued, which explains the strength drops (Bent Over Row DOWN, RDL DOWN). PPL structure solves this automatically: same muscle gets 96h+ between sessions.

PPL ADHERENCE & PROGRAMME AGE

This is Week 3 of the PPL x2 programme (started 2026-05-24). Adherence this week is 0% by session type: all three sessions were Full Body, not PPL splits. Attendance is 3 of 6 sessions (50%). The missed slots are Tuesday, Thursday, and Saturday -- a clear Mon/Wed/Fri-only pattern. The programme was followed correctly in Week 1 (Mon Push A, Tue Pull A, Wed Legs A, Thu Push B) before reverting to a Full Body format from Week 2 onwards. If the Tue/Thu/Sat slots cannot be filled, the programme design must be discussed and adjusted -- but the corrective deficits (hip thrust, rear delts) cannot be resolved on 3 days.

CORRECTIVE COMPLIANCE

Hip Thrust hit rate this week: 0 of 2 planned Legs sessions. APT correction is receiving zero stimulus for the second consecutive week. Anterior pelvic tilt shortens the hip flexors and inhibits the glutes; without Hip Thrust loading the glutes, the pattern deepens with every squat and RDL. Rear delt sets: 3 this week against an 8-set target -- 38% hit rate. At 44, when front deltoid and pec strength runs substantially ahead of posterior shoulder strength, the rotator cuff (specifically infraspinatus and teres minor) can no longer maintain the humeral head centrally in the glenoid socket during heavy pressing. Over months this leads to impingement, then tendinopathy, then potential rotator cuff tears. Face Pulls and rear delt flies every Pull session are the low-cost insurance policy. Core stabilisers (Dead Bug / Bird Dog): 0 of 3 sessions this week -- the T8-T12 kyphosis corrective has not appeared in any session in the current Full Body run.

LATERAL RAISE -- V-TAPER KPI

The V-taper KPI is clearly declining: 12.5kg x 13 on 16 May; 10kg x 15 on

28 May; not logged at all the following week; 10kg x 12 this week. Both weight and rep count are going backward over four weeks. For Ganesh this matters more than for a typical client: the love handles currently sit at lat-width level, meaning the waist already visually negates shoulder width. Lateral Raise must go UP -- heavier dumbbells, cleaner sets -- for the V-taper to actually appear as fat comes off. A declining KPI here means the visual ratio stays flat even as the cut progresses.

HARD FLAGS

1. Rep collapse -- Hanging Leg Raise: 8 reps Set 1 -> 4 reps Set 2 (Mon 08 Jun; note logged: "low energy and tiredness"). Significant drop; suggests accumulated fatigue or insufficient sleep before training.
2. All 3 sessions ran over the 60-min cap: 71 min / 65 min / 70 min. Longer sessions after 60 min primarily eat into recovery, not productive volume.
3. Hip Thrust: 0 appearances in any session -- APT corrective completely absent despite being mandatory every Legs session.
4. Core stabiliser: 0 of 3 sessions -- Dead Bug / Bird Dog not logged once this week; T8-T12 kyphosis goes uncorrected.
5. Lateral Raise weight has dropped 2.5kg (12.5 -> 10kg) over 4 weeks -- the primary V-taper KPI is moving in the wrong direction.

OVERALL VERDICT: DECLINING

Volume is down 17% vs last week (12,574 vs 15,079 kg*reps). Session count flat at 3 (same as last week, still 50% below the 6-session target). PPL adherence at 0% for the second consecutive week. All corrective markers (Hip Thrust, core stabiliser, rear delt volume) at or near zero. Lateral raise KPI trending down. The only green signal is that the 48h recovery floor was cleared in every session pair. Everything else is at or below the prior week level. DECLINING.

8. PLAN FOR NEXT WEEK

Programme week: W4 (Week 4 of PPL x2 -- final week before deload)

Progression rules applied:

Compound: +2.5kg if ALL sets hit target reps this week; else HOLD.

Isolation: +1.25kg if ALL sets hit target reps this week; else HOLD.

Use 40kg as the starting point; add 5kg next week if all sets clean.]

>> Dead Bug 3x10 -- mandatory T8-T12 corrective. DO NOT SKIP.

Key focus: Hip Thrust is non-negotiable -- set up first, before fatigue

sets in. APT has gone uncorrected for 2 full weeks.

THURSDAY 19 Jun -- Push B (Shoulders primary + Chest variation + Triceps)

Overhead Press (Barbell) 3 sets x 6 reps @ 40kg

[HOLD -- DOWN last week; don't progress on a declining lift]

[HOLD -- V-taper KPI; match the 10kg x 15 from Push B on 28 May]

Face Pull 3 sets x 15 reps @ 24.9kg

[HOLD -- same as Push B on 28 May; mandatory rear delt work]

Overhead Triceps Extension (Cable) 3 sets x 11 reps @ 24kg

>> Dead Bug 3x10 -- mandatory T8-T12 corrective. DO NOT SKIP.

Key focus: this is a shoulder-primary day -- OHP is the main lift.
Watch for internal shoulder rotation at the top; stop if sharp pain.

FRIDAY 20 Jun -- Pull B (Back + Rear Delts + Biceps; Rear Delt Fly MANDATORY)

Bent Over Row (Barbell) 4 sets x 5 reps @ 60kg
[HOLD -- DOWN this week; rebuild before adding load]
Seated Cable Row - V Grip 3 sets x 8 reps @ 70kg
[HOLD -- last session (05 Jun) was DOWN; don't stack load on fatigue]
Rear Delt Reverse Fly (Dumbbell) 3 sets x 15 reps @ 7.5kg
[HOLD -- MANDATORY rear delt for Pull B; first 30-day log was Fri 12 Jun]
Face Pull 3 sets x 15 reps @ 24.9kg

Hammer Curl (Dumbbell) 3 sets x 10 reps @ 12.5kg
[HOLD -- last log 18 May; first time back in this format]
>> Bird Dog 3x10 each side -- mandatory T8-T12 corrective. DO NOT SKIP.
Key focus: rear delt total this week should reach 9 sets across
Mon/Tue/Thu/Fri (3 sets Face Pull each session). Hit all 4 sessions.

SATURDAY 21 Jun -- Legs B (Glutes + Hamstrings + Single-Leg; Hip Thrust MANDATORY)

Hip Thrust (Barbell) 3 sets x 10 reps @ 40kg

[HOLD -- DOWN trend; same as Wed 10 Jun weight]
Single Leg Press (Machine) 3 sets x 10 reps @ 30kg per leg
[CONSERVATIVE START -- last log (27 May) had 0kg recorded (data gap);

only; rebuild position before adding load]
>> Dead Bug 3x10 -- mandatory T8-T12 corrective. DO NOT SKIP.
Key focus: Hip Thrust comes FIRST -- glute activation before heavy hinge
work improves both APT correction and deadlift safety.
