4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

• +-----+-----+-----+-----

Chest | 11 | 12 | 1 | LOW

Back | 15 | 14 | -1 | OK

Shoulders | 9 | 10 | 1 | LOW

Traps | 13 | 6 | -7 | OK

Rear Delts | 7 | 8 | 1 | LOW

Biceps | 6 | 8 | 2 | LOW

Triceps | 6 | 8 | 2 | LOW

Legs | 24 | 14 | -10 | OK

Core | 12 | 6 | -6 | OK

Push sets: 26 | Pull sets: 41 | Ratio pull:push = 1.58 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 13 sets this week (need 6+/week)

OK.

Enough work this week: Back, Traps, Legs, Core

Short this week : Chest, Shoulders, Rear Delts, Biceps, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (10 Apr-17 Apr): 5 sessions

Wk -2 (17 Apr-24 Apr): 5 sessions

Wk -1 (24 Apr-01 May): 5 sessions

Time between sessions this week:

Fri 01 May 08:20 -> Sat 02 May 08:25: 24h

Sat 02 May 08:25 -> Mon 04 May 08:00: 48h

Mon 04 May 08:00 -> Tue 05 May 08:30: 25h

Tue 05 May 08:30 -> Wed 06 May 07:48: 23h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Fri 01 May + Sat 02 May (24h apart): overlap = back

Sat 02 May + Mon 04 May (48h apart): overlap = back, core, traps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)
 Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)
 Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle This wk Min Status

Chest 11 8 OK
 Back 15 10 OK
 Shoulders 9 8 OK
 Traps 13 4 OK
 Rear Delts 7 6 OK
 Biceps 6 6 OK
 Triceps 6 6 OK
 Legs 24 10 OK
 Core 12 4 OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 29 May 2026

7. KEY INSIGHTS

RECOVERY AT 44

At 44, muscle protein synthesis takes 48-72h to peak and clear, meaning training the same muscle before that window closes adds fatigue rather than stimulus. This week had two problematic overlaps: Friday (Upper / back via Lat Pulldown) into Saturday (Lower / back via Trap-bar Deadlift) with only 24h between sessions; and Saturday into Monday at exactly 48h, again with back, traps and core shared. The 24h Friday-Saturday gap is the bigger concern -- the back and traps had no meaningful recovery before being loaded again. Structurally, Push (Tue) and Legs (Wed) sitting only 23h apart is fine because the muscle groups don't overlap, but the cumulative CNS load of five sessions in six days is still high.

REAR DELT AND TRAP GAP

When the front of the shoulder (anterior deltoid, pecs) is consistently stronger than the rear (posterior deltoid, rotator cuff), the humeral head is pulled forward in the socket. Over time this compresses the supraspinatus tendon and increases impingement risk -- a common and often permanent injury

in older lifters. This week: rear delts hit 7 sets (target 8+), which is only 1 set short and manageable. Traps are well covered at 13 sets. The pull:push ratio of 1.58 is healthy. The action item is simply to protect the one rear-delt set gap -- add one extra set of face pulls or reverse flys to any upper or pull session next week.

RED FLAGS THIS WEEK

1. Trap-bar Deadlift rep collapse (12->8): Loading jumped from 80kg x 12 (previous) to 90kg x 8. The e1RM improved (+7.3kg to 114kg) but the session started at 80kg x 12 and the working sets dropped to 8 reps -- suggestive of insufficient rest between sets or the weight jump being slightly too aggressive. Hold at 90kg x 8 next session before moving up.
2. Triceps Pushdown weight discrepancy (55kg Fri vs 27.2kg Tue): These two numbers come from different gyms (Drona vs Cult) with different cable stacks. They are not directly comparable. Both are progressing within their own gym, so this flag is a data-entry issue, not a performance drop. Log gym name in notes so the system can track each separately.
3. Biceps and Triceps both 2 sets short (6 of 8 target each): Five sessions ran but these smaller muscle groups keep getting squeezed. At a calorie deficit the minimum effective volume matters most for retention -- add one bicep set to the Pull session and one tricep set to the Push session next week.

OVERALL TREND

Strongly positive. Weekly volume has risen four weeks consecutively: 29,629 -> 36,234 -> 39,584 -> 42,033 kg*reps (+42% over four weeks). Session count is a perfect 5/5 every week. Compound e1RMs are broadly moving up (Deadlift, Seated Shoulder Press, Lat Pulldown all up this week). The only structural concern is scheduling -- the volume gains risk stalling or triggering injury if the 24h back-to-back pattern continues.
