4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		11		12		1		LOW
Back		15		14		-1		OK
Shoulders		9		10		1		LOW
Traps		13		6		-7		OK
Rear Delts		7		8		1		LOW
Biceps		6		8		2		LOW
Triceps		6		8		2		LOW
Legs		24		14		-10		OK
Core		12		6		-6		OK

Push sets: 26 | Pull sets: 41 | Ratio pull:push = 1.58 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flies.

Traps : 13 sets this week (need 6+/week)

OK.

Enough work this week: Back, Traps, Legs, Core

Short this week : Chest, Shoulders, Rear Delts, Biceps, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (09 Apr-16 Apr): 5 sessions

Wk -2 (16 Apr-23 Apr): 5 sessions

Wk -1 (23 Apr-30 Apr): 5 sessions

Time between sessions this week:

Fri 01 May 08:20 -> Sat 02 May 08:25: 24h

Sat 02 May 08:25 -> Mon 04 May 08:00: 48h

Mon 04 May 08:00 -> Tue 05 May 08:30: 25h

Tue 05 May 08:30 -> Wed 06 May 07:48: 23h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Fri 01 May + Sat 02 May (24h apart): overlap = back

Sat 02 May + Mon 04 May (48h apart): overlap = back, core, traps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	11	8	OK
Back	15	10	OK
Shoulders	9	8	OK
Traps	13	4	OK
Rear Delts	7	6	OK
Biceps	6	6	OK
Triceps	6	6	OK
Legs	24	10	OK
Core	12	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 28 May 2026

7. KEY INSIGHTS

RECOVERY AT 44

At 44, muscle tissue repairs more slowly -- the evidence base points to 48-72 h between training bouts on the same muscle group for full recovery. This week showed three problematic gaps: Friday Upper Body (lat pulldown, rear delts) was followed only 24 h later by Saturday deadlifts (back, traps). Monday Pull and

Tuesday Push were 25 h apart, and Tuesday-to-Wednesday was just 23 h. None of these are catastrophic in a single week, but stacking compressed gaps across five consecutive sessions compounds fatigue rather than adding training stimulus. The one positive signal: no sessions after midnight all week.

REAR DELT AND TRAP GAP

When the anterior deltoid and upper chest are meaningfully stronger than the rear delts and external rotators, the shoulder joint is pulled slightly forward at rest. Over time this strains the rotator cuff. This week rear delts logged only 7 sets -- one short of the 8-set minimum. Traps are already over-covered at 13 sets (target 6). The fix is not more trap work; it is consistently hitting 8+ rear-delt sets each week. Add one extra face pull or reverse fly set every Pull session to close the gap reliably.

RED FLAGS THIS WEEK

1. Deadlift rep collapse (12 -> 8 reps): The warm-up set was logged at 80 kg x 12 then the working sets jumped to 90 kg x 8. A 12.5% load increase paired with a 33% rep drop in the same session signals that either the warm-up was logged as a working set, or the jump was too aggressive. Next session: hold 90 kg and drive reps to 10 before adding weight.
2. Triceps pushdown weight discrepancy (55 kg on Fri -> 27.2 kg on Tue): These are almost certainly different machines at Drona vs Cult with different weight stacks. The system flagged a "weight drop" -- confirm which cable station you use at each gym and log a note once so the flag clears in future reports.
3. Three 0 kg bodyweight exercises (Pull Up, Sissy Squat, Dead Bug): These are legitimate bodyweight moves but they create noise in strength tracking every week. For pull-ups, add a +5 kg plate as soon as you can hit 3 x 8 bodyweight; this gives the tracker a real weight to trend. For Sissy Squat and Dead Bug, log reps only in Hevy notes so the 0 kg flag stops appearing.

OVERALL TREND

Volume has risen four weeks in a row: 29,629 -> 36,234 -> 39,584 -> 42,033 kg.reps. All nine muscle groups are above minimum effective volume for body recomposition. Most compound e1RMs are moving up (deadlift +7.3 kg, seated shoulder press +2.5 kg, hip thrust +8.0 kg, both shrug variants positive). Romanian deadlift is the one regressing compound (-5.2 kg e1RM). Trend is clearly positive overall.
