4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest	3	12	9	CRITICAL
Back	8	14	6	CRITICAL
Shoulders	6	10	4	CRITICAL
Traps	0	6	6	CRITICAL
Rear Delts	3	8	5	CRITICAL
Biceps	6	8	2	LOW
Triceps	3	8	5	CRITICAL
Legs	13	14	1	LOW
Core	0	6	6	CRITICAL

Push sets: 12 | Pull sets: 17 | Ratio pull:push = 1.42 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 0 sets this week (need 6+/week)

SHORT by 6 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core
 Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target

Wk -3 (20 Jul-27 Jul): 2 sessions

Wk -2 (27 Jul-03 Aug): 0 sessions

Wk -1 (03 Aug-10 Aug): 2 sessions

Time between sessions this week:

Mon 10 Aug 08:59 -> Wed 12 Aug 09:09: 48h

Wed 12 Aug 09:09 -> Fri 14 Aug 08:49: 48h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Wed 12 Aug + Fri 14 Aug (48h apart): overlap = legs, other

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	3	8	AT RISK
Back	8	10	AT RISK
Shoulders	6	8	AT RISK
Traps	0	4	AT RISK
Rear Delts	3	6	AT RISK
Biceps	6	6	OK
Triceps	3	6	AT RISK
Legs	13	10	OK
Core	0	4	AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Triceps, Core

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 6

Weeks since last deload : 6 (deload every 4 weeks)

*** DELOAD THIS WEEK ***

Cut all sets to 2 per exercise. Keep weights the same.

Deload weeks let joints and connective tissue recover.

You will come back stronger after the deload.

CORRECTIVE MARKERS:

LATERAL RAISE (V-TAPER KPI):

7. KEY INSIGHTS

RECOVERY AT 44:

Page 6 | Generated 2026-08-16 | Confidential - Ganesh

= 48h 10min -- just clears the 48h minimum. Wed 12 Aug (09:09) to Fri 14 Aug (08:49) = 47h 40min -- 20 minutes SHORT of 48h. The muscle overlap across that gap is legs: leg extension and lying leg curl were trained on Wed, leg press on Fri. At 44, training a muscle before 48h of repair elevates injury risk and suppresses the growth signal. This specific pair (Wed legs + Fri legs) is the offender. Under a proper PPL split, each muscle group gets 96h+ between same-muscle sessions -- the built-in architecture of the programme, currently not being used.

PPL ADHERENCE AND PROGRAMME AGE:

Adherence is 17% this week (1 of 6 planned sessions matched the expected day type). This is W12 of the PPL x2 programme (started 2026-05-24). All sessions are still labelled "Full Body A/B/C" -- the previous programme template -- not Push/Pull/Legs. The missed-day pattern is stark: Tuesday (Pull A), Thursday (Push B), and Saturday (Legs B) are skipped every week, producing a Mon/Wed/Fri 3x/week cadence. At 3 sessions vs the 6-session target, every muscle group is receiving roughly half the programmed volume. W12 is too late to still be running the old template.

CORRECTIVE COMPLIANCE:

Hip Thrust: 0% hit rate this week. Both Legs A (Wednesday) and Legs B (Saturday) were either skipped entirely or replaced by Full Body sessions containing no Hip Thrust. Without Hip Thrust in every Legs session, anterior pelvic tilt will not correct -- the hip flexors stay dominant and the glutes remain inhibited, which loads the lumbar spine on every squat and deadlift. Rear delts reached only 3 sets this week against the 8-set target (short by 5). At 44, chronically stronger front delts vs rear delts allows the humeral head to migrate anteriorly in the shoulder socket; this progressively pinches the supraspinatus tendon in the subacromial space, leading to rotator cuff impingement -- a painful, slow-healing condition. Core stabilisers (Dead Bug or Bird-Dog) were absent from all 3 sessions. Lower thoracic kyphosis (T8-T12) requires active stabiliser work every session; passive compound lifts do not substitute.

LATERAL RAISE TREND (V-TAPER KPI):

The Lateral Raise has been flat at 10kg x 14 reps for two consecutive weeks (03 Aug and 10 Aug) with zero weight progression. For Ganesh specifically, love handles sit at lat-width level, which visually collapses the shoulder-to-waist ratio and eliminates the V-shape. Growing the lateral deltoid is the only way to widen the silhouette above that waist line. A two-week plateau at 10kg means it is time to test 11.25kg or 12kg -- if all 14 reps are clean and controlled, the weight is ready to go up.

HARD FLAGS:

1. No Hip Thrust in any session this week -- APT correction is being completely skipped. This is a mandatory corrective for every Legs session.
2. No Dead Bug or Bird-Dog in any session -- T8-T12 kyphosis work is fully absent. This must appear in every single session without exception.
3. Pull Up logged at 0kg across all occurrences (Mon 10 Aug, plus historical).
Bodyweight pull-ups logged as 0kg produce an e1RM of 0.0kg, making strength tracking impossible. Log at actual bodyweight (~87kg) or use assisted-band notation.
4. Wed 12 Aug session ran 65 minutes -- 5 minutes over the 60-minute hard cap.
5. Leg recovery gap Wed->Fri: 47h 40min, technically under the 48h minimum for the legs muscle group.
6. W12 of the programme and still using the Full Body A/B/C template rather than the PPL split. This structural issue suppresses volume across all muscle groups.

OVERALL VERDICT: Volume improved 46% week-over-week (13,059 vs 8,973 kg*reps) and session count increased from 2 to 3 -- positive momentum on raw volume. However, programme adherence (17%), corrective compliance (Hip Thrust 0%, core 0%), and the persistent use of the Full Body template in W12 of a PPL programme all remain at critical levels. Volume trend up, structure declining.

Overall: HOLDING

8. PLAN FOR NEXT WEEK

Programme week: W13 of PPL x2 -- DELOAD WEEK

(6 weeks trained continuously; programme calls for deload every 4 weeks.

Deload: all working sets reduced to 2 per exercise. Weights unchanged.

Purpose: joint and connective tissue recovery. You will come back stronger.)

MONDAY 17 AUG -- Push A (Chest + Shoulders + Triceps) [DELOAD]

Bench Press (Barbell) 2 x 6 @ 60kg
 Overhead Press (Barbell) 2 x 7 @ 45kg
 Lateral Raise (Dumbbell) 2 x 14 @ 10kg (if all reps clean, try 11.25kg)
 Triceps Pushdown 2 x 11 @ 27.2kg
 Dead Bug 3 x 10 -- DO NOT SKIP (T8-T12 kyphosis)

Focus: Form quality only. No grinding. Deload means moving well, not moving light -- same weight, fewer sets, full ROM on every rep.

TUESDAY 18 AUG -- Pull A (Back compound + Biceps) [DELOAD]

Bent Over Row (Barbell) 2 x 7 @ 70kg
 Pull Up (bodyweight) 2 x 6 @ bodyweight (log as ~87kg -- NOT 0kg)
 Lat Pulldown (Machine) 2 x 6 @ 66kg
 Bicep Curl (Barbell) 2 x 9 @ 20kg
 Dead Bug 3 x 10 -- DO NOT SKIP

Focus: Fix the Pull Up logging today. Enter 87kg as the load (or actual body weight). A 0kg entry wipes the e1RM record for this lift.

WEDNESDAY 19 AUG -- Legs A (Quads, Hamstrings, Glutes) [DELOAD]

Hip Thrust (Barbell) 2 x 10 @ 40kg *** MANDATORY -- APT correction

(no prior log found; 40kg is a conservative
start -- drive hips to full lockout, squeeze
glutes 1 second at top before lowering)

- Squat (Barbell) 2 x 6 @ 70kg
- Leg Extension (Machine) 2 x 9 @ 77kg
- Lying Leg Curl (Machine) 2 x 10 @ 36kg
- Bird-Dog 3 x 10 per side -- DO NOT SKIP

Focus: Hip Thrust is the session priority. If it means dropping one other
exercise to stay under 60 min, drop Leg Extension, not the Hip Thrust.

THURSDAY 20 AUG -- Push B (Shoulders + Chest variation + Triceps) [DELOAD]

- Overhead Press (Barbell) 2 x 7 @ 45kg
- Lateral Raise (Dumbbell) 2 x 14 @ 10kg
- Incline Chest Press (Machine) 2 x 11 @ 30kg
- Triceps Pushdown 2 x 11 @ 27.2kg
- Dead Bug 3 x 10 -- DO NOT SKIP

Focus: OHP technique check -- full lockout overhead, ribs down, no lower-back
arch. Elbows should track just inside shoulder-width on the way up.

FRIDAY 21 AUG -- Pull B (Back + Rear Delts + Biceps) [DELOAD]

* Rear Delt work is MANDATORY this session

- Bent Over Row (Barbell) 2 x 7 @ 70kg
- Lat Pulldown (Machine) 2 x 6 @ 66kg
- Rear Delt Reverse Fly (Dumbbell) 3 x 13 @ 10kg (3 sets here to partially
recover the rear delt weekly deficit)
- Bicep Curl (Barbell) 2 x 9 @ 20kg
- Bird-Dog 3 x 10 per side -- DO NOT SKIP

Focus: This is a deload but rear delts are at 3 sets for the week by this
point. The third set of Reverse Fly is not optional.

SATURDAY 22 AUG -- Legs B (Glutes, Hamstrings, Single-Leg) [DELOAD]

* Hip Thrust is MANDATORY

- Hip Thrust (Barbell) 2 x 10 @ 40kg *** MANDATORY -- APT correction
- Leg Press (Machine) 2 x 12 @ 50kg
- Lying Leg Curl (Machine) 2 x 10 @ 36kg
- Romanian Deadlift (Barbell) 2 x 8 @ 75kg
- Bird-Dog 3 x 10 per side -- DO NOT SKIP

Focus: This is Legs B -- not a Full Body day. Stay on glutes and hamstrings
only. No OHP, no bench, no rows today. Keep it clean.
