4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		11		12		1		LOW
Back		12		14		2		LOW

Shoulders		9		10		1		LOW
Traps		10		6		-4		OK
Rear Delts		7		8		1		LOW
Biceps		6		8		2		LOW
Triceps		6		8		2		LOW
Legs		21		14		-7		OK
Core		12		6		-6		OK

Push sets: 26 | Pull sets: 35 | Ratio pull:push = 1.35 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 10 sets this week (need 6+/week)

OK.

Enough work this week: Traps, Legs, Core

Short this week : Chest, Back, Shoulders, Rear Delts, Biceps, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (07 Apr-14 Apr): 3 sessions

Wk -2 (14 Apr-21 Apr): 5 sessions

Wk -1 (21 Apr-28 Apr): 5 sessions

Time between sessions this week:

Tue 28 Apr 08:18 -> Wed 29 Apr 08:32: 24h

Wed 29 Apr 08:32 -> Fri 01 May 08:20: 48h

Fri 01 May 08:20 -> Sat 02 May 08:25: 24h

Sat 02 May 08:25 -> Mon 04 May 08:00: 48h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Fri 01 May + Sat 02 May (24h apart): overlap = back

Sat 02 May + Mon 04 May (48h apart): overlap = back, core, traps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	11	8	OK
Back	12	10	OK
Shoulders	9	8	OK
Traps	10	4	OK
Rear Delts	7	6	OK
Biceps	6	6	OK
Triceps	6	6	OK
Legs	21	10	OK
Core	12	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 26 May 2026

7. KEY INSIGHTS

RECOVERY AT 44

At 44, muscle protein synthesis after a hard set takes 48-72h to complete. Training the same muscle before that window closes adds fatigue on top of incomplete repair -- you get diminishing returns from the session and raise injury risk. This week showed two recovery violations: Fri 01 May + Sat 02 May were only 24h apart with back overlap, and Sat 02 May + Mon 04 May were 48h apart with back, core, and trap overlap. The back in particular took three sessions in five days without a full rest window between any consecutive pair. Rearranging so that at least 48h separates sessions that share a major muscle group will produce better strength gains with less cumulative wear.

REAR DELT AND TRAP BALANCE

The front of the shoulder (anterior delt, chest) gets heavy work every Push session. The rear delt and rotator cuff stabilisers get far less. When the front muscles are substantially stronger than the rear, the shoulder joint is pulled forward out of neutral -- this is a common mechanism for rotator cuff impingement and biceps tendon irritation. This week: rear delts reached 7 sets against a target of 8, a small but recurring gap. Traps are fine at 10 sets (target 6). The rear delt gap is manageable now but needs consistent weekly attention. Face pulls and reverse flys are the fix -- both are already in the programme; aim for 3+ sets per Pull or Upper session.

RED FLAGS THIS WEEK

1. Deadlift rep collapse (Sat 02 May): warm-up set was 80kg x 12 reps, then working sets jumped to 90kg for only 8 reps -- a 4-rep drop. Jumping 10kg and losing 4 reps in the same session suggests the warm-up weight was heavier than intended, leaving less in the tank for working sets. Next session: keep working weight at 90kg x 8 and build reps back to 10 before adding load.
2. Pull Up logged at 0kg (Mon 04 May): bodyweight pull-ups record 0kg by default in Hevy. This is a data entry issue, not a strength concern. Log bodyweight (79kg) or use the assisted format so progress is trackable over time.
3. Triceps Pushdown weight discrepancy: the Cult gym cable stack produced 24.9kg in the Push session (Tue 28 Apr) versus 55kg in the Drona Upper session (Fri 01 May). These are different machines with different cable ratios -- not a strength loss. Use a consistent machine or note the gym in the exercise title to avoid false alarms.

OVERALL TREND

This is the first full report for this 30-day block. The trend within the block is clearly positive: weekly volume has climbed 17,652 -> 33,896 -> 41,584 -> 42,688 kg*reps over the past four weeks, session count is at target (5/5), and e1RM is rising across almost every major compound lift. The only structural risk is the recovery overlap on back -- address that and the trajectory is excellent.
