## 4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

-----+-----+-----+-----+-----

Chest | 7 | 12 | 5 | CRITICAL

Back | 7 | 14 | 7 | CRITICAL

Shoulders | 7 | 10 | 3 | LOW

Traps | 3 | 6 | 3 | LOW

Rear Delts | 3 | 8 | 5 | CRITICAL

Biceps | 3 | 8 | 5 | CRITICAL

Triceps | 3 | 8 | 5 | CRITICAL

Legs | 0 | 14 | 14 | CRITICAL

Core | 6 | 6 | 0 | OK

Push sets: 17 | Pull sets: 16 | Ratio pull:push = 0.94 (LOW -- add more pulling work)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 3 sets this week (need 6+/week)

SHORT by 3 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Enough work this week: Core

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

## 5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target

Wk -3 (25 Apr-02 May): 6 sessions

Wk -2 (02 May-09 May): 5 sessions

Wk -1 (09 May-16 May): 6 sessions

Time between sessions this week:

Sat 16 May 10:11 -> Mon 18 May 08:28: 46h

Mon 18 May 08:28 -> Tue 19 May 08:43: 24h

No sessions after midnight IST this week. Good.

No back-to-back same-muscle sessions this week. Good.

## 6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

## WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle This wk Min Status

-----

Chest 7 8 AT RISK  
Back 7 10 AT RISK  
Shoulders 7 8 AT RISK  
Traps 3 4 AT RISK  
Rear Delts 3 6 AT RISK  
Biceps 3 6 AT RISK  
Triceps 3 6 AT RISK  
Legs 0 10 AT RISK  
Core 6 4 OK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 13 Jun 2026

## 7. KEY INSIGHTS

### RECOVERY AT 44

At 44, muscle fibres need 48-72h to repair micro-tears before being loaded again. This week the same-muscle (Push) sessions fell on Saturday 16 May and Tuesday 19 May -- a 72h gap, which is fine. Pull was only done once (Monday 18 May), 46h after the Push session but targeting different muscles, so no overlap problem. No back-to-back same-muscle loading this week. However only 3 sessions were completed, so the risk this week isn't under-recovery -- it's under-stimulus. Under-training at a 417 kcal deficit causes muscle loss just as surely as over-training does.

### REAR DELT AND TRAP GAP

When the front shoulder muscles (anterior deltoid, pecs) are significantly stronger than the rear (rear deltoid, lower traps, rotator cuff), the humeral head migrates forward in the socket. Over years this frays the supraspinatus tendon -- the most commonly torn rotator cuff muscle in men over 40. This week: 3 rear-delt sets vs the 8-set minimum. The push:pull ratio this week was 0.94 (more push than pull), compounding the imbalance. Rear delts are already at CRITICAL status. Add 2+ sets of face pulls or reverse flys to every session until the deficit is cleared.

### RED FLAGS THIS WEEK

- Session 3 (Tue 19 May, 78 min) logged only 1 set -- one set of Shoulder Press 20kg x 10. A 78-minute session with 1 set is almost certainly a logging error or an aborted workout. Check Hevy and correct the entry if sets are missing; if it was genuinely aborted, that counts as a missed session.
- Triceps Pushdown flagged DOWN -44.8kg e1RM vs prior. This is a machine discrepancy: Cult cable at 27.2kg vs Drona stack at 60kg -- not a real strength loss. Always note the gym when logging

Triceps Pushdown so comparisons are valid.

3. Volume collapsed 76% week-on-week (12,926 vs 54,762 kg\*reps).

With 8 of 9 muscle groups below the minimum retention stimulus on a 417 kcal/day deficit, this week carries meaningful muscle-loss risk. Two missed sessions explain nearly all of the drop.

## OVERALL TREND

The prior three weeks averaged 5.7 sessions and ~49,500 kg\*reps.

This week broke that pattern sharply: 3 sessions, 12,926 kg\*reps.

The trend is negative for this single week but the 4-week context still shows a consistently active athlete. One bad week on a diet is not catastrophic, but two in a row would be -- the next session is the priority.
