

30-Day Analysis Report

This week : 18 May to 25 May 2026

ATHLETE PROFILE

Name: Ganesh
Profile: 44M | 181 cm | 87 kg -> 79 kg
Goal: Body Recomposition -- Fat loss, muscle preservation
Pace: 0.5 kg/week | 15% calorie deficit

Generated on 2026-05-24

WEEKLY TRAINING REPORT

Generated : 2026-05-25 05:03 IST

User : Ganesh | 44M | 181cm | 87kg -> 79kg

This week : 18 May to 25 May 2026

1. THIS WEEK AT A GLANCE

Sessions : 2 of 5 target

Prior 3 weeks: 6, 5, 6 sessions (avg 5.7)

Overall score: 2/10 -- Below par -- low sessions or major muscle imbalances this week.

Biggest win : Seated Cable Row - V Grip (Cable) -- 77kg x 10 reps (e1RM 102.7kg)

Biggest concern: Legs -- 0 sets vs 14 target (14 sets short)

vs last week : Volume DOWN 84% (8,025 vs 50,673 kg*reps)

2. THIS WEEK -- SESSION BY SESSION

Session 1: Monday 18 May 2026 08:28 IST | 42 min

Type : Monday: Pull (Cult)

Volume : 7,825 kg*reps | 19 sets

Seated Cable Row - V Grip (Cable): 77kg x 10r x 3 sets (e1RM 102.7kg) vs prior: +2.6kg e1RM

Pull Up: 0kg x 7r x 4 sets (e1RM 0.0kg) [FLAG: 0kg logged]

Shrug (Smith Machine): 70kg x 12r x 3 sets (e1RM 98.0kg) vs prior: +0.0kg e1RM

Face Pull: 24.9kg x 16r x 3 sets (e1RM 38.2kg) vs prior: -1.6kg e1RM

Hammer Curl (Dumbbell): 12.5kg x 10r x 3 sets (e1RM 16.7kg) vs prior: +0.5kg e1RM

Cable Crunch: 35kg x 15r x 3 sets (e1RM 52.5kg) vs prior: +0.0kg e1RM [FLAG: weight drop 35kg->30kg]

Session 2: Tuesday 19 May 2026 08:43 IST | 78 min

Type : Tuesday: Push (Cult)

Volume : 200 kg*reps | 1 sets

Shoulder Press (Dumbbell): 20kg x 10r x 1 sets (e1RM 26.7kg) vs prior: -1.3kg e1RM

4-WEEK VOLUME TREND

Wk -3 (27 Apr-04 May): [#####] 52,352 kg*reps 6 sess

Wk -2 (04 May-11 May): [#####.....] 40,120 kg*reps 5 sess

Wk -1 (11 May-18 May): [#####.] 50,673 kg*reps 6 sess

This wk (18 May-25 May): [###.....] 8,025 kg*reps 2 sess

3. STRENGTH -- HOW ARE THE LIFTS MOVING?

e1RM = estimated 1-rep max (formula: weight x (1 + reps / 30))

[C] = compound lift | [I] = isolation

[C] Pull Up

Best this week : 0kg x 7 reps (e1RM 0.0kg)

vs prior : First time in 30-day log

Next session : 0kg x 7 reps

* FLAGS: 0kg logged -- check entry

[C] Seated Cable Row - V Grip (Cable)

Best this week : 77kg x 10 reps (e1RM 102.7kg)

vs prior : UP +2.6kg vs 11 May

Next session : 79.5kg x 10 reps

[C] Shoulder Press (Dumbbell)

Best this week : 20kg x 10 reps (e1RM 26.7kg)

vs prior : DOWN -1.3kg vs 16 May

Next session : 19.0kg x 10 reps

[I] Cable Crunch

Best this week : 35kg x 15 reps (e1RM 52.5kg)

vs prior : SAME as 11 May

Next session : 35kg x 15 reps

* FLAGS: weight drop (35kg->30kg)

[I] Face Pull

Best this week : 24.9kg x 16 reps (e1RM 38.2kg)

vs prior : DOWN -1.6kg vs 11 May

Next session : 23.65kg x 16 reps

[I] Hammer Curl (Dumbbell)

Best this week : 12.5kg x 10 reps (e1RM 16.7kg)

vs prior : SAME as 11 May

Next session : 13.75kg x 10 reps

[I] Shrug (Smith Machine)

Best this week : 70kg x 12 reps (e1RM 98.0kg)

vs prior : SAME as 11 May

Next session : 70kg x 12 reps

4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		0		12		12		CRITICAL
Back		7		14		7		CRITICAL
Shoulders		1		10		9		CRITICAL
Traps		3		6		3		LOW
Rear Delts		3		8		5		CRITICAL
Biceps		3		8		5		CRITICAL
Triceps		0		8		8		CRITICAL
Legs		0		14		14		CRITICAL
Core		6		6		0		OK

Push sets: 1 | Pull sets: 16 | Ratio pull:push = 16.00 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much

stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 3 sets this week (need 6+/week)

SHORT by 3 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Enough work this week: Core

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 2 of 5 target

Wk -3 (27 Apr-04 May): 6 sessions

Wk -2 (04 May-11 May): 5 sessions

Wk -1 (11 May-18 May): 6 sessions

Time between sessions this week:

Mon 18 May 08:28 -> Tue 19 May 08:43: 24h

No sessions after midnight IST this week. Good.

No back-to-back same-muscle sessions this week. Good.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	0	8	AT RISK
Back	7	10	AT RISK
Shoulders	1	8	AT RISK
Traps	3	4	AT RISK
Rear Delts	3	6	AT RISK
Biceps	3	6	AT RISK
Triceps	0	6	AT RISK
Legs	0	10	AT RISK
Core	6	4	OK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 15 Jun 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week: W1 (programme started 2026-05-24 -- today is Day 1; Sunday = REST)

Sessions this week: 2 of 6 target

NOTE: Sessions on 18-19 May pre-date programme start (2026-05-24).

Adherence assessed against day-of-week template for reference only.

Formal PPL adherence tracking begins Monday 25 May 2026 (W2).

Day	Expected	Detected	Status
* +-----+-----+-----			
Mon 18 May	Push A	Pull	WRONG -- Pull logged on a Push A day (pre-prog)
Tue 19 May	Pull A	Push	WRONG -- Push logged on a Pull A day (pre-prog, 1 set only)

Adherence: 0% (0 of 2 sessions matched programme day type)

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : N/A -- 0 Legs sessions logged this week

Core stabiliser (all sessions): 0 of 2 sessions

Mon 18 May -- Cable Crunch present (flexion, NOT a stabiliser)

Tue 19 May -- no core work logged

Dead Bug / Bird-Dog absent from both sessions

Rear delt work in Pull sessions: 1 of 1 Pull sessions -- OK

Face Pull 24.9kg x 16r x 3s on Mon 18 May

Sessions over 60 min : Tue 19 May -- 78 min OVER (only 1 set logged; likely incomplete data entry -- investigate)

LATERAL RAISE (V-TAPER KPI):

This week : None logged

Prior week: 35kg x 9r (Lateral Raise Machine, Thu 14 May) | Dumbbell: 12.5kg x 13r (Tue 12 May)

Trend : DOWN (zero lateral raise sets in the last 7 days)

7. KEY INSIGHTS

Recovery at 44:

This week logged just 2 sessions -- Mon 18 May Pull (08:28 IST) and Tue 19 May Push (08:43 IST). The 24-hour gap between them is the only intra-week pair to examine; they worked different muscle groups (back/biceps vs. shoulders), so no same-muscle 48h rule was broken within this window. Looking one session further back: the Sat 16 May Push (chest/shoulders/triceps, 10:11 IST) to Tue 19 May Push (shoulders, 08:43) spans approximately 70 hours -- above the 48h minimum. Every same-muscle pair this

week clears the recovery threshold. However, the 24h Mon-to-Tue gap is tighter than ideal at 44; under the new PPL schedule the programme naturally provides 48h+ between same-muscle sessions, which will improve this.

PPL adherence and programme age:

This is W1 of the PPL x2 programme (started 2026-05-24; today is programme Day 1). The 2 sessions logged this week both pre-date the programme and were inverted from the template -- Pull on a Push day, Push on a Pull day. Formal adherence is 0%, though this reflects the pre-programme transition rather than a lapse on an established schedule. Starting Monday 25 May the order is fixed: Push A, Pull A, Legs A, Push B, Pull B, Legs B. The single most consistent miss from the 30-day log is Legs: only 3 Legs sessions across 4 weeks (3 of a possible 8+ Leg days). Missing Wednesday and Saturday is the primary volume risk going forward.

Corrective compliance:

Hip Thrust hit rate in the 30-day log: 3 of 3 Legs sessions included Hip Thrust (100%)

* this is solid and must continue every Legs session. Rear delts this week: 3 sets vs the 8/week target (5 sets short). At 44, if the anterior deltoid (used in every press) stays significantly stronger than the rear deltoid, the shoulder joint is pulled forward in its socket during pressing. Over time this wears the supraspinatus tendon leading to rotator cuff impingement -- a common and painful shoulder injury for lifters in their 40s who over-press and under-pull. 8 rear delt sets per week is protective, not optional. Core stabiliser: 0 of 2 sessions had Dead Bug or Bird-Dog this week. Cable Crunch is a spinal flexion exercise -- it does not address T8-T12 kyphosis. Dead Bug must appear in every session without exception.

Lateral raise trend:

The V-taper KPI is DOWN -- no lateral raise sets logged in the last 7 days, compared to 12.5kg x 13r (dumbbell) and 35kg x 9r (machine) in the prior week. For Ganesh specifically, the love handles currently sit at lat-width level, which means the visual taper from shoulder to waist depends almost entirely on building wider medial deltoids. Lateral raise weight progression is the single lever that widens that ratio. Every session where lateral raises are skipped is a missed V-taper opportunity -- the more body fat drops, the more the shoulder width will determine the silhouette.

Hard flags:

1. Session Tue 19 May -- 1 set logged for a 78-minute session: A 78-minute block with only one set of Shoulder Press is a data anomaly. Either the Heavy entry is incomplete, or the session was abandoned. This inflates the reported duration and understates volume. Verify and add any missing sets before next session.
2. Core stabiliser absent from both sessions: Dead Bug / Bird-Dog = 0 sets this week. T8-T12 kyphosis will not improve without weekly spinal stabilisation work.
3. Zero Legs sessions this week: 0 sets against a 14/week target. Quads, hamstrings, and glutes are below the minimum stimulus for muscle retention during a 417 kcal/day deficit. These muscles are at risk of loss.
4. Rear delts 3 sets vs 8/week target: 5 sets short. Cumulative underdosing of rear delts compounds into shoulder imbalance over months.
5. Volume crash -- 8,025 vs 50,673 kg*reps prior week (down 84%): Even accounting for the programme transition, this week's total is alarmingly low.

Overall verdict: DECLINING

Volume down 84%, zero Legs sessions, core correctives absent both sessions, lateral raise KPI stalled, 0% PPL adherence. Context: the programme officially started today (Day 1), so this partly reflects a transition week. Week 2 (Mon 25 May onwards) is where proper adherence, corrective compliance, and volume targets begin in earnest.

8. PLAN FOR NEXT WEEK

Programme week: W2 (Week 1 of active PPL x2 -- Mon 25 May to Sat 30 May 2026)

This is the first full programme training week. All 6 sessions. All correctives.

MONDAY 25 May -- Push A (Chest primary + Shoulders + Triceps)

Incline Bench Press (Dumbbell) 4 x 10 @ 25.0kg

[was 22.5kg x 12r x 4s on Sat 16 May; all 4 sets hit target -- compound +2.5kg]

Shoulder Press (Dumbbell) 3 x 12 @ 20.0kg

[hold weight; Tue 19 May dropped to 10r in only 1 set; stabilise 3 x 12 before progressing]

Chest Fly (Machine) 3 x 10 @ 53.0kg

[was 52kg x 11r x 3s Sat 16 May; isolation +1.25kg; use 53kg or nearest notch above 52]

Lateral Raise (Dumbbell) 3 x 12 @ 13.75kg

[was 12.5kg x 13r x 3s Sat 16 May; isolation +1.25kg = 13.75kg; use 14kg if available, else 12.5kg x 15r -- V-taper KPI: do not skip this exercise]

Triceps Pushdown 3 x 12 @ 27.2kg

[was 27.2kg x 11r x 3s at Cult; rep progression to 12r this session, then +weight next]

Dead Bug 3 x 10 reps each side -- DO NOT SKIP

[T8-T12 kyphosis corrective; 5 minutes at end of session; non-negotiable]

Key focus: Chest is primary. Strict shoulder press form -- no torso lean. 60 min cap.

TUESDAY 26 May -- Pull A (Back compound + Biceps)

Seated Cable Row - V Grip 3 x 10 @ 79.5kg

[was 77kg x 10r x 3s Mon 18 May; all 3 sets hit -- compound +2.5kg]

Pull Up (bodyweight) 4 x 7 @ 0kg

[stable; log as 0kg in Hevy -- correct for bodyweight; target 7-8r per set]

Shrug (Smith Machine) 3 x 12 @ 70.0kg

[holding weight; focus on 2s pause at top; full scapular depression on descent]

Face Pull 3 x 15 @ 27.2kg

[was 24.9kg x 16r x 3s Mon 18 May; isolation +1.25kg = 26.15kg; use 27.2kg next cable notch]

Hammer Curl (Dumbbell) 3 x 12 @ 12.5kg

[was 12.5kg x 10r x 3s Mon 18 May; all sets hit -- progress via reps first; 12r before moving to 13.75kg]

Cable Crunch 3 x 15 @ 30.0kg

[HOLD ALL 3 SETS at 30kg -- weight drop from 35 to 30 flagged Mon 18 May; consistent 30kg x 15r is more productive than a drop mid-session]

Dead Bug 3 x 10 reps each side -- DO NOT SKIP

Key focus: Face Pull sets are the rear delt stimulus protecting the shoulder joint.

Do not rush or sub them out. Rear delt underdosing is the biggest structural risk.

WEDNESDAY 27 May -- Legs A (Quads, Hamstrings, Glutes)

Leg Press (Machine) 3 x 10 @ 62.5kg

[was 60kg x 12r x 3s Wed 13 May; all sets hit -- compound +2.5kg]

Hip Thrust (Machine) 3 x 10 @ 22.5kg -- MANDATORY (APT correction)
 [was 20kg x 13r x 3s Wed 13 May; all sets hit -- compound +2.5kg; gluteal activation is the primary APT lever -- no excuses to skip]

Romanian Deadlift (Dumbbell) 3 x 10 @ 42.5kg
 [was 40kg x 11r x 3s Wed 13 May; all sets hit -- compound +2.5kg]

Hip Abduction (Machine) 3 x 10 @ 87.5kg
 [was 85kg x 10r x 3s Wed 13 May; isolation +1.25kg; use nearest machine notch above 85kg]

Hip Adduction (Machine) 3 x 10 @ 47.5kg
 [was 45kg x 10r x 3s Wed 13 May; isolation +1.25kg = 46.25kg; round to 47.5kg]

Bird-Dog 3 x 10 reps each side -- DO NOT SKIP
 [T8-T12 corrective for Legs day; also fires glute-med to reinforce Hip Thrust pattern]

Key focus: Hip Thrust first (after warm-up) while fresh -- glute activation at 22.5kg determines whether the APT corrective effect is real. Squeeze at top for 1s.

THURSDAY 28 May -- Push B (Shoulders primary + Chest variation + Triceps)

Seated Shoulder Press (Machine) 3 x 10 @ 82.5kg
 [was 80kg x 10r x 3s Thu 14 May; all sets hit -- compound +2.5kg; use half-plates if available, else stay 80kg x 12r]

Lateral Raise (Machine) 3 x 9 @ 35.0kg
 [rep collapse on set 3 (9, 9, 8) Thu 14 May -- HOLD WEIGHT; target 3 x 9r consistently before any progression; this is the V-taper KPI on the machine]

Chest Press (Machine) 4 x 10 @ 62.5kg
 [was 60kg x 12r x 4s Thu 14 May; all 4 sets hit -- isolation +1.25kg = 61.25kg; round to 62.5kg or nearest notch; 60kg x 13r if increment unavailable]

Bicep Curl (Machine) 3 x 10 @ 25.0kg
 [rep collapse across sets (12, 11, 10) Thu 14 May -- HOLD WEIGHT at 25kg; target 3 x 10r consistent before progressing]

Triceps Pushdown 3 x 10 @ 60.0kg
 [rep collapse set 3 (11, 11, 9) Thu 14 May -- HOLD WEIGHT; target 3 x 10r then progress]

Dead Bug 3 x 10 reps each side -- DO NOT SKIP

Key focus: Machine shoulder press allows heavier load than dumbbell -- maintain tight core and vertical torso at 82.5kg. This is a strength checkpoint.

FRIDAY 29 May -- Pull B (Back + Rear Delts + Biceps)

Lat Pulldown (Machine) 3 x 10 @ 62.5kg
 [was 60kg x 11r x 3s Thu 14 May; all sets hit -- compound +2.5kg]

Rear Delt Reverse Fly (Machine) 4 x 10 @ 52.5kg -- MANDATORY
 [was 50kg x 11r x 4s Thu 14 May; isolation +1.25kg = 51.25kg; round to 52.5kg; rear delt mandate for Pull B; this is 4 of the 8 required rear delt sets this week]

Face Pull 3 x 15 @ 24.9kg
 [secondary rear delt movement; 24.9kg for volume focus -- with Reverse Fly above, total rear delt sets this week = 10 of 8 target -- mandate met]

Hammer Curl (Dumbbell) 3 x 12 @ 12.5kg
 [same progression as Pull A; focus on full supination at top of curl]

Cable Crunch 3 x 15 @ 30.0kg
 [consistent 30kg across all 3 sets -- no intra-set weight drop]

Dead Bug 3 x 10 reps each side -- DO NOT SKIP

Key focus: Between Reverse Fly (4 sets) and Face Pull (3 sets), this session delivers

7 rear delt sets. Combined with Tuesday's 3 Face Pull sets = 10 total for the week.
Do not cut either rear delt movement.

SATURDAY 30 May -- Legs B (Glutes, Hamstrings, Single-Leg + Rack Pull)

- Hip Thrust (Machine) 3 x 10 @ 22.5kg -- MANDATORY (APT correction)
[same target as Wed Legs A; both Legs sessions require Hip Thrust; load before deadlift to pre-activate glutes for the heavy hinge that follows]
 - Deadlift (Trap bar) 3 x 8 @ 97.5kg
[was 95kg x 9r x 2s + 90kg x 10r x 1s on Fri 15 May; compound +2.5kg; drop to 8r target at new weight; brace hard, full hip extension at lockout]
 - Leg Press (Machine) 3 x 10 @ 72.5kg
[was 70kg x 10r x 3s Fri 15 May; all sets hit -- compound +2.5kg]
 - Seated Leg Curl (Machine) 3 x 10 @ 43.0kg
[was 43kg x 8r x 3s Fri 15 May; all sets hit 8r -- progress via reps first; target 10r before adding weight]
 - Bulgarian Split Squat (BW) 3 x 10 per leg @ 0kg
[single-leg requirement; no recent log -- conservative bodyweight start; focus on knee tracking over toes, upright torso, and balance]
 - Bird-Dog 3 x 10 reps each side -- DO NOT SKIP
- Key focus: Hip Thrust before the trap bar deadlift -- glutes fired up = safer lower back.
97.5kg is a new weight for the deadlift; treat set 1 as a technique check.

+-----+		
Deload	: not yet -- next due Week 5, approx 21 Jun 2026	
Timing	: 6-9 PM IST -- no sessions after midnight	
Nutrition:	2,367 kcal/day 174g protein minimum	
+-----+
