#### 4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

|                            |  |    |  |    |          |
|----------------------------|--|----|--|----|----------|
| * +-----+-----+-----+----- |  |    |  |    |          |
| Chest                      |  | 11 |  | 12 | 1   LOW  |
| Back                       |  | 16 |  | 14 | -2   OK  |
| Shoulders                  |  | 12 |  | 10 | -2   OK  |
| Traps                      |  | 9  |  | 6  | -3   OK  |
| Rear Delts                 |  | 7  |  | 8  | 1   LOW  |
| Biceps                     |  | 9  |  | 8  | -1   OK  |
| Triceps                    |  | 6  |  | 8  | 2   LOW  |
| Legs                       |  | 27 |  | 14 | -13   OK |
| Core                       |  | 12 |  | 6  | -6   OK  |

Push sets: 29 | Pull sets: 41 | Ratio pull:push = 1.41 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 9 sets this week (need 6+/week)

OK.

Enough work this week: Back, Shoulders, Traps, Biceps, Legs, Core

Short this week : Chest, Rear Delts, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

#### 5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (16 Apr-23 Apr): 7 sessions

Wk -2 (23 Apr-30 Apr): 5 sessions

Wk -1 (30 Apr-07 May): 5 sessions

Time between sessions this week:

Fri 08 May 08:44 -> Sat 09 May 08:34: 24h [FLAG: only 24h rest, same muscles: back, biceps]

Sat 09 May 08:34 -> Mon 11 May 08:26: 48h

Mon 11 May 08:26 -> Tue 12 May 08:15: 24h

Tue 12 May 08:15 -> Wed 13 May 08:17: 24h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Fri 08 May + Sat 09 May (24h apart): overlap = back, biceps

Sat 09 May + Mon 11 May (48h apart): overlap = back, biceps, core, traps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

## 6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

## WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

| Muscle     | This wk | Min | Status |
|------------|---------|-----|--------|
| Chest      | 11      | 8   | OK     |
| Back       | 16      | 10  | OK     |
| Shoulders  | 12      | 8   | OK     |
| Traps      | 9       | 4   | OK     |
| Rear Delts | 7       | 6   | OK     |
| Biceps     | 9       | 6   | OK     |
| Triceps    | 6       | 6   | OK     |
| Legs       | 27      | 10  | OK     |
| Core       | 12      | 4   | OK     |

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 04 Jun 2026

## 7. KEY INSIGHTS

Recovery at 44: Muscle repair at 44 takes 48-72h -- not the 24-36h a younger lifter manages. This week had three consecutive-day session pairs: Fri->Sat (24h, with back overlap via deadlift and lat pulldown), Mon->Tue (24h), and Tue->Wed (24h). Three back-to-back gaps in one week is the clearest risk here. Repeated sessions before muscles fully recover add cumulative fatigue rather than new stimulus, and mask real strength. Where the schedule allows, insert a full rest day between sessions -- especially before heavy compound days.

The rear delt and trap gap: The rear deltoid stabilises the shoulder by counterbalancing the larger chest and front shoulder. When pressing muscles consistently outwork the rear delts, the shoulder is pulled forward and the rotator cuff tendons get impinged -- this is how chronic shoulder pain starts. This week rear delts logged 7 sets against an 8-set minimum (1 short). Traps are fine at 9 sets vs a 6-set target. The fix is low-cost: one extra face pull or reverse fly set on any pull day that falls short of 8 rear-delt sets.

Red flags from the session data:

1. Three sessions in three consecutive days (Mon/Tue/Wed) at 24h rest each.  
At 44 this is the clearest recovery risk -- prioritise spacing next week.
2. Triceps Pushdown shows an apparent drop from 60kg (Drona cable stack) to 27.2kg (Cult cable) -- almost certainly different equipment, not a real strength drop. Log the gym/equipment name to avoid false alarms.
3. Lateral Raise (Machine) rep collapse from 9 reps to 6 reps in set 3 (?33% within a session) -- the working weight of 35kg is above current capacity. Drop to 30kg x 10 reps next time and build back up.

Overall trend: Week 1 of this analysis system. Volume this week (41,442 kg\*reps) is stable against the prior week (42,033, ?1%). All 5 sessions hit. All muscle groups cleared the minimum effective volume for body recomposition. The trap-bar deadlift reached a 30-day best of e1RM 117.0kg. Positive baseline -- the task now is consistent spacing, fixing the triceps and rear delt shortfalls, and continuing the steady strength gains across compounds.
