4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		0		12		12		CRITICAL
Back		5		14		9		CRITICAL
Shoulders		3		10		7		CRITICAL
Traps		0		6		6		CRITICAL

Rear Delts		3		8		5		CRITICAL
Biceps		6		8		2		LOW
Triceps		3		8		5		CRITICAL
Legs		9		14		5		CRITICAL
Core		0		6		6		CRITICAL

Push sets: 6 | Pull sets: 14 | Ratio pull:push = 2.33 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 0 sets this week (need 6+/week)

SHORT by 6 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 2 of 5 target

Wk -3 (04 Aug-11 Aug): 3 sessions

Wk -2 (11 Aug-18 Aug): 2 sessions

Wk -1 (18 Aug-25 Aug): 2 sessions

Time between sessions this week:

Wed 26 Aug 08:24 -> Fri 28 Aug 11:03: 51h

No sessions after midnight IST this week. Good.

No back-to-back same-muscle sessions this week. Good.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	0	8	AT RISK
Back	5	10	AT RISK
Shoulders	3	8	AT RISK
Traps	0	4	AT RISK
Rear Delts	3	6	AT RISK

Biceps	6	6	OK
Triceps	3	6	AT RISK
Legs	9	10	AT RISK
Core	0	4	AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Triceps, Legs, Core

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 8

Weeks since last deload : 8 (deload every 4 weeks)

*** DELOAD THIS WEEK ***

Cut all sets to 2 per exercise. Keep weights the same.

Deload weeks let joints and connective tissue recover.

You will come back stronger after the deload.

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week : W15 (started 2026-05-24; 99 days elapsed -> 15 weeks rounded up)

Sessions this week : 2 of 6 target

NOTE: All sessions logged are titled "Full Body A/B/C" -- no PPL keywords.

Types inferred from exercises per protocol. Both sessions are mixed Full Body -- they do NOT cleanly map to a single PPL session type.

Day	Expected	Detected	Status
*	+-----+	-----+	-----

Tue 25 Aug	Pull A	--	MISSED
Wed 26 Aug	Legs A	Full Body B (INFER.)	OFF-PROGRAMME
Thu 27 Aug	Push B	--	MISSED
Fri 28 Aug	Pull B	Full Body C (INFER.)	OFF-PROGRAMME
Sat 29 Aug	Legs B	--	MISSED
Sun 30 Aug	REST	Rest	OK (rest day)
Mon 31 Aug	Push A	--	MISSED

Adherence: 0% (0 of 2 sessions matched their expected PPL session type)

Session attendance: 33% (2 of 6 target sessions completed)

Session type evidence:

Wed 26 Aug -- OHP (Push) + Leg Curl/Extension (Legs) + Bicep Curl (Pull) +
Triceps (Push) = TRUE FULL BODY -- not Legs A

Fri 28 Aug -- Bent Over Row/Lat Pulldown (Pull) + Leg Press (Legs) +
Rear Delt Fly = TRUE FULL BODY -- not Pull B

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 0 dedicated Legs sessions -- NO LEGS SESSION
LOGGED THIS WEEK. Hip Thrust therefore MISSING. APT correction protocol
completely skipped. FLAG.

Core stabiliser (all sessions): 0 of 2 sessions (Dead Bug / Bird-Dog absent in both sessions -- T8-T12 kyphosis correction protocol abandoned)

Rear delt work in Pull sessions: Session 9 (Fri 28 Aug) includes Rear Delt Reverse Fly alongside pull exercises -- 1 of 1 pull-type session has rear delt work, BUT 2 of 3 sets logged at 0kg (data entry error). Effective rear delt sets this week: 1 (only Set 1 at 10kg). Total rear delt sets: 3 logged (1 effective). Target: 8+/week. SHORT by 5+ effective sets.

Sessions over 60 min: None. Session 8 = 57 min (OK). Session 9 = 8 min (FLAG -- extremely short, possible incomplete log or early exit).

LATERAL RAISE (V-TAPER KPI):

This week (Aug 25-31): NOT LOGGED in either session

Prior week (Aug 18-24): 10kg x 15 reps (Session 7, Mon 24 Aug)

Trend: DOWN -- Lateral Raise absent this week. V-taper KPI moving backward.

7. KEY INSIGHTS

RECOVERY AT 44

Only one session pair this week: Session 8 (Wed 26 Aug 08:24 IST) and Session 9 (Fri 28 Aug 11:03 IST) -- gap of 51 hours. Both sessions train legs (leg curl/extension in Sess 8; leg press in Sess 9), so the same-muscle gap for legs is 51h. This clears the 48h minimum but only just. At 44 connective tissue recovers more slowly than muscle fibre -- a 51h gap on legs is the floor, not comfortable headroom. No other same-muscle pairs this week. The single 51h gap is technically OK but warrants no further compression.

PPL ADHERENCE AND PROGRAMME AGE

This is Week 15 of the PPL x2 programme (started 2026-05-24). PPL adherence stands at 0% -- neither session this week matches its expected PPL session type (Legs A on Wednesday, Pull B on Friday). Instead, both sessions are Full Body splits that predate the programme design. With only 2 of 6 sessions completed (33% attendance), the programme is being executed at roughly one-third its intended intensity. The pattern over 4 weeks is consistent: 3, 2, 2, 2 sessions/week, always on Wednesday and Friday, suggesting a scheduling lock-in that prevents the Mon/Thu/Sat sessions from happening. This is the most important structural problem in the log.

CORRECTIVE COMPLIANCE

Hip Thrust appeared zero times this week -- no dedicated Legs session was logged, and Hip Thrust was absent from the Full Body sessions that did happen. Without Hip Thrust at least twice a week, the anterior pelvic tilt

(APT) correction stalls completely. APT causes compressive load to shift to the lower lumbar at age 44; over months this becomes a pain and injury risk, not just a postural issue. Core stabiliser work (Dead Bug or Bird-Dog for T8-T12 kyphosis) was also absent in both sessions -- 0 of 2. Rear delts accumulated only 3 logged sets (1 effective due to 0kg entry error), vs a target of 8+/week. Front-to-rear shoulder imbalance at this volume deficit raises rotator cuff impingement risk over time: the anterior deltoid and pec minor become proportionally dominant, pulling the humeral head forward in the socket. At 44, this type of imbalance is a source of chronic shoulder pain within 6-18 months of sustained neglect.

LATERAL RAISE TREND

Lateral Raise was not performed in either session this week, down from 10kg x 15 reps last week (Mon 24 Aug). Trend: DOWN. This matters because Ganesh's love handles sit at lat-width level, which collapses the visual shoulder-to-waist ratio. Wider medial deltoids are the primary lever for improving the V-taper on a body recomp -- without consistent Lateral Raise progression, the top of the V will not widen and the visual ratio will not improve regardless of fat loss at the waist.

HARD FLAGS

1. Session 9 (Fri 28 Aug) duration: 8 minutes. A complete session cannot fit in 8 minutes. Likely an early exit or a logging issue -- 4 exercises appear in the log but the session may not represent a real training stimulus.
2. Rear Delt Reverse Fly -- 0kg logged on Sets 2 and 3 of Session 9. Only one working set at 10kg was effective. Check data entry.
3. Zero core work in 2/2 sessions this week -- Dead Bug and Bird-Dog completely absent. Kyphosis correction protocol has now been missing for multiple consecutive weeks.
4. No Hip Thrust in any session -- APT correction mandatory exercise skipped entirely. No dedicated Legs session logged this week at all.
5. Lateral Raise absent this week -- V-taper KPI has gone backward.

OVERALL VERDICT

Volume is UP 21% vs last week (10,254 vs 8,506 kg*reps) driven by heavier leg curl work, but this is from a low base (both weeks 2 sessions). Strength is mixed: Bent Over Row improved +2.4kg e1RM; Rear Delt Fly dropped -1.0kg. Adherence is unchanged at 2/6 sessions. Corrective compliance is poor across all three markers. The programme remains fully off its PPL x2 design after 15 weeks. Overall verdict: HOLDING -- a narrow volume tick upward, but no structural improvement in adherence, correctives, or programme design.

8. PLAN FOR NEXT WEEK
