4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		12		12		0		OK
Back		13		14		1		LOW
Shoulders		10		10		0		OK
Traps		6		6		0		OK
Rear Delts		9		8		-1		OK
Biceps		5		8		3		LOW
Triceps		6		8		2		LOW
Legs		9		14		5		CRITICAL
Core		9		6		-3		OK

Push sets: 28 | Pull sets: 33 | Ratio pull:push = 1.18 (OK -- balanced)

Rear delts: 9 sets this week (need 8+/week)

OK -- shoulder balance maintained.

Traps : 6 sets this week (need 6+/week)

OK.

Enough work this week: Chest, Shoulders, Traps, Rear Delts, Core

Short this week : Back, Biceps, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 4 of 5 target

Wk -3 (02 May-09 May): 6 sessions

Wk -2 (09 May-16 May): 6 sessions

Wk -1 (16 May-23 May): 3 sessions

Time between sessions this week:

Mon 25 May 08:12 -> Tue 26 May 10:14: 26h

Tue 26 May 10:14 -> Wed 27 May 08:37: 22h [FLAG: only 22h rest, same muscles: back, biceps, other, traps]

Wed 27 May 08:37 -> Thu 28 May 07:55: 23h [FLAG: only 23h rest, same muscles: back, core, other]

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Mon 25 May + Tue 26 May (26h apart): overlap = chest, other, rear_delts

Tue 26 May + Wed 27 May (22h apart): overlap = back, biceps, other, traps

Wed 27 May + Thu 28 May (23h apart): overlap = back, core, other

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	12	8	OK
Back	13	10	OK
Shoulders	10	8	OK
Traps	6	4	OK
Rear Delts	9	6	OK
Biceps	5	6	AT RISK
Triceps	6	6	OK
Legs	9	10	AT RISK
Core	9	4	OK

Muscles at risk of loss this week (below minimum stimulus):

Biceps, Legs

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 20 Jun 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week: W1 (started 2026-05-24; Day 6 of 7)

Sessions this week: 4 of 6 target

Day	Expected	Detected	Status
* +-----+-----+-----			
Mon 25 May	Push A	Push A	OK
Tue 26 May	Pull A	Pull A	OK
Wed 27 May	Legs A	Legs A	OK
Thu 28 May	Push B	Push B	OK
Fri 29 May	Pull B	-	MISSED
Sat 30 May	Legs B	-	UPCOMING

Adherence: 80% (4 of 5 sessions due Mon-Fri completed, all on correct day)

All 4 detected sessions matched programme schedule exactly (titles explicit).

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 1 -- MISSING on Wed 27 May [CRITICAL -- APT unmet]

Core stabiliser (all sessions): 4 of 4 -- OK (Bird Dog every session; Dead Bug + Side Plank in Legs A)

Rear delt work in Pull sessions: 1 of 1 -- OK (Face Pull 3 sets, Tue 26 May Pull A)

Sessions over 60 min: ALL 4 sessions exceeded the 60-min programme cap

Mon 25 May Push A : 84 min (+24 min over target)

Tue 26 May Pull A : 118 min (+58 min over target)

Wed 27 May Legs A : 122 min (+62 min over target)

Thu 28 May Push B : 103 min (+43 min over target)

LATERAL RAISE (V-TAPER KPI):

This week: 10kg x 15 reps | Prior week: 12.5kg x 13 reps | Trend: DOWN

7. KEY INSIGHTS

RECOVERY AT 44:

Not a single session pair this week cleared the 48h minimum for same-muscle recovery. Mon Push A to Tue Pull A was 26h apart with rear-delt overlap (Face Pull appears in Push A, Pull A works traps and back). Tue Pull A to Wed Legs A was only 22h -- the worst offender -- with back, biceps, and traps overlapping directly: Deadlift (Trap bar) on Wednesday hit the same back and trap tissue trained in Pull A just 22 hours earlier. Wed Legs A to Thu Push B was 23h with back and core overlap again. At 44, satellite-cell repair cycles run 20-30% slower than at 25; piling consecutive sessions on the same tissue delivers accumulated fatigue rather than progressive stimulus and raises the risk of connective-tissue strain. Restructure W2 so that at least 48h separates same-muscle sessions: the Mon Push / Tue Pull / Wed Legs / Thu Push / Fri Pull / Sat Legs sequence is structurally sound -- the problem

is the training window (7-10 AM consecutive days). Shifting one session to the 6-9 PM window the next day buys the needed gap.

PPL ADHERENCE AND PROGRAMME AGE:

This is Week 1 of the 6-day PPL x2 programme (started 2026-05-24). Adherence is 80%: 4 of 5 sessions due by Friday were completed, and all 4 landed on the correct PPL day (titles matched exactly -- no inference needed). Friday Pull B is unlogged as of report generation at 23:32 IST on 29 May; if Saturday Legs B is also missed the week closes at 4/6 (67%). There is no multi-week pattern yet, but Friday is already flagged as the at-risk slot in W1.

CORRECTIVE COMPLIANCE:

Hip Thrust was completely absent from Legs A on 27 May, making APT correction compliance 0 of 1 (0%). Anterior pelvic tilt pulls the lumbar spine into excessive extension under load; without Hip Thrust to fire the glute-hamstring chain, the pelvis stays anterior and every Deadlift set compounds lumbar shear stress. This is the most urgent corrective failure of the week -- it must not repeat in W2. On the positive side, rear delts hit 9 sets against the 8-set target (OK). At 44 with a front-heavy shoulder pattern, if anterior deltoids stay disproportionately stronger than the rear delts, the humeral head progressively migrates forward in the glenoid socket; over months this impinges the supraspinatus tendon, causing rotator cuff pain that can end overhead pressing entirely. The Face Pull in every Pull and Push session is the direct countermeasure. Core stabilisers (Bird Dog) appeared in all 4 sessions -- the T8-T12 kyphosis corrective is the one area of full compliance this week.

LATERAL RAISE TREND:

The V-taper KPI is moving DOWN. Dumbbell Lateral Raise dropped from 12.5kg (13 reps, Sat 16 May) to 10kg (15 reps, Thu 28 May) -- a 2.5kg / 20% weight regression. For Ganesh, the love handles sit at exactly lat-width level, collapsing the visual shoulder-to-waist ratio; medial-delt width from progressive Lateral Raise overload is the primary mechanism to widen the shoulder cap and restore the V-taper. The drop likely reflects programme transition (new PPL template starting lighter), but 10kg must be the floor -- the target for Mon Push A next week is 11.25kg.

HARD FLAGS:

1. Data entry error -- Overhead Triceps Extension (Cable) Thu 28 May: Set 1 logged as 111 reps (should be 11). This inflates the 30-day volume and e1RM stats. Correct in Hevy before the next session.
2. Single Leg Press (Machine) Wed 27 May: 0kg logged across 3 sets. Confirm the actual machine weight and log it correctly; 0kg cannot be used for progression tracking.
3. All 4 sessions ran over 60 min (84 / 118 / 122 / 103 min). The Legs A session at 122 min is more than double the programme limit. Root cause: extended stretching and warm-up blocks logged as separate exercises (8+ preamble entries per session).

- Consolidate warm-up to 10 min max; do not log each stretch as a separate set.
4. Hip Thrust absent from Legs A -- mandatory APT correction unmet (see above).
 5. Rack Pull (Tue 26 May): opened at 70kg x 5 reps, then dropped to 50kg x 8 for sets 2-3. A 20kg within-session weight crash indicates the working weight was too ambitious. Reset to 60kg x 5 for all sets in W2 and build from there.

OVERALL VERDICT: IMPROVING

Volume rose 81% (23,436 vs 12,926 kg*reps last week) and session count increased from 3 to 4. All completed sessions matched the correct PPL day. However, the corrective failure on Hip Thrust is critical, all sessions exceeded 60 min, and the Lateral Raise V-taper KPI is regressing. W2 must fix these three issues while maintaining volume.

8. PLAN FOR NEXT WEEK
