4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		6		12		6		CRITICAL
Back		12		14		2		LOW
Shoulders		6		10		4		CRITICAL
Traps		6		6		0		OK
Rear Delts		0		8		8		CRITICAL
Biceps		0		8		8		CRITICAL
Triceps		3		8		5		CRITICAL
Legs		10		14		4		CRITICAL
Core		8		6		-2		OK

Push sets: 15 | Pull sets: 18 | Ratio pull:push = 1.20 (OK -- balanced)

Rear delts: 0 sets this week (need 8+/week)

SHORT by 8 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flies.

Traps : 6 sets this week (need 6+/week)

OK.

Enough work this week: Traps, Core

Short this week : Chest, Back, Shoulders, Rear Delts, Biceps, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target

Wk -3 (12 May-19 May): 7 sessions

Wk -2 (19 May-26 May): 2 sessions

Wk -1 (26 May-02 Jun): 4 sessions

Time between sessions this week:

Wed 03 Jun 08:41 -> Fri 05 Jun 08:02: 47h

Fri 05 Jun 08:02 -> Mon 08 Jun 08:13: 72h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Wed 03 Jun + Fri 05 Jun (47h apart): overlap = back, core, legs, traps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	6	8	AT RISK
Back	12	10	OK
Shoulders	6	8	AT RISK
Traps	6	4	OK
Rear Delts	0	6	AT RISK
Biceps	0	6	AT RISK
Triceps	3	6	AT RISK
Legs	10	10	OK
Core	8	4	OK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Shoulders, Rear Delts, Biceps, Triceps

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 30 Jun 2026

Programme week : W3 (started 2026-05-24; June 8 = day 16 -> 3 weeks elapsed rounded up)

Sessions this week: 3 of 6 target

Day	Expected	Detected	Status
*	+	+	

Wed 03 Jun | Legs A | Full Body (row+leg press+OHP) INFERRED | WRONG

Fri 05 Jun | Pull B | Full Body (RDL+incline bench+cable row) INFERRED | WRONG

Mon 08 Jun | Push A | Push A (bench+lateral raise+squat) INFERRED | INFERRED

Missed: Tue 02 Jun (Pull A), Thu 04 Jun (Push B), Sat 06 Jun (Legs B), Sun 07 Jun (REST - correct)

Adherence: 33% (1 of 3 sessions on correct day or correctly inferred)

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 0 dedicated Legs sessions -- no Legs A or Legs B performed.

Full Body 2 (Wed 03 Jun) included Leg Press but NO Hip Thrust.

MISSING across entire week.

Core stabiliser (all sessions): 0 of 3 sessions.

Hanging Leg Raise present in 2 sessions but is NOT a

Dead Bug / Bird-Dog / Plank substitute for T8-T12 correction.

Rear delt work in Pull sessions: 0 of 0 dedicated Pull sessions.

Total rear delt sets this week: 0 (target: 8+ /week).

Sessions over 60 min: ALL 3 sessions exceeded the 60-minute cap --

Wed 03 Jun: 83 min (+23 min over)

Fri 05 Jun: 98 min (+38 min over -- worst offender)

Mon 08 Jun: 71 min (+11 min over)

LATERAL RAISE (V-TAPER KPI):

This week : 10kg x 12 reps | Prior week : 10kg x 15 reps | Trend: DOWN

7. KEY INSIGHTS

RECOVERY AT 44:

Three sessions this week with two session-pair gaps. Wed 03 Jun -> Fri 05 Jun: 47 hours

* one hour short of the 48h minimum. Both sessions hit the back (Bent Over Row on Wed; Seated Cable Row + Romanian Deadlift on Fri). Training the same muscle before it has fully repaired adds fatigue rather than stimulus, and at 44 the inflammatory response runs longer than at 25. The offending pair is Wed/Fri back overlap. The Fri -> Mon gap (72h) cleared the minimum comfortably and is fine.

PPL ADHERENCE AND PROGRAMME AGE:

This is Week 3 of the PPL x2 programme (started 2026-05-24). Adherence this week is 33% (1 of 3 sessions matched the correct PPL day). More critically, all three sessions were

labelled Full Body rather than Push / Pull / Legs -- the structured PPL format established in W1 (which had correctly titled Push A, Pull A, Legs A, Push B sessions) has been abandoned. Thursdays and Saturdays were skipped in both the prior week window and this week, suggesting those are the highest-risk days for dropout. With only 3 of 6 sessions completed, weekly volume targets for 6 of 9 muscle groups remain unmet.

CORRECTIVE COMPLIANCE:

Hip Thrust rate this week: 0 -- no dedicated Legs session was performed at all. Without Hip Thrust the glute-activation chain that counters anterior pelvic tilt gets zero work, leaving the lumbar spine in a sustained anterior load position. Rear delt sets: 0 of 8 target. This matters specifically at 44: the anterior deltoids are being trained every session (bench press, overhead press), while rear delts receive nothing. When front shoulder muscles stay disproportionately stronger than rear, the humeral head sits forward in the glenoid socket. Under pressing load this compresses the supraspinatus tendon -- the most common rotator cuff impingement site. Continuing this imbalance at 44 raises injury risk significantly. Dead Bug / Bird Dog: 0 of 3 sessions. T8-T12 lower thoracic kyphosis corrective has been absent the entire week despite both exercises appearing in the W1 sessions.

LATERAL RAISE -- V-TAPER KPI:

10kg x 12 reps this week vs 10kg x 15 reps in the prior week -- same load, 3 fewer reps, trend DOWN. The all-time best in the last 30 days was 12.5kg x 13 reps (12 May), meaning the V-taper KPI has regressed by 2.5kg from its peak. For Ganesh specifically: love handles currently sit at lat-width level, visually collapsing the torso ratio. Shoulder width from lateral raises is the primary mechanism for visually outrunning the waist measurement. A downward trend means the V-taper is actively getting worse, not better.

HARD FLAGS:

1. All 3 sessions exceeded the 60-minute cap: 83 min (Wed), 98 min (Fri -- 38 min over), 71 min (Mon). A 98-minute session at 6am raises cortisol and competes with recovery.
2. Incline Bench Press: rep collapse 12 -> 8 within the same session (Fri 05 Jun). The weight needs to drop by 5% (20kg -> 19kg) before attempting progression again.
3. Wed -> Fri back sessions only 47h apart -- the minimum recovery window was not respected.
4. Hanging Leg Raise on Mon 08 Jun logged at 0kg with only 4 reps (session notes: "low energy and tiredness") -- this is a core exercise, not the corrective Dead Bug/Bird Dog mandated for T8-T12. Core work is present but the corrective protocol is absent.
5. Zero rear delt sets this week against an 8-set weekly target. This is the highest-risk structural gap in the current programme.

OVERALL VERDICT:

Volume DOWN 40% (13,297 vs 22,299 kg*reps last week). Sessions DOWN (3 vs 4). PPL structure abandoned (Full Body sessions replacing dedicated Push/Pull/Legs). All three correctives missed: Hip Thrust absent, rear delts at 0 sets, Dead Bug/Bird Dog at 0

sessions. All sessions ran over 60 minutes. The only positives: Bench Press e1RM UP +16kg (56 -> 72) and Squat e1RM UP +25kg. Compounds are gaining but the programme backbone has collapsed around them.

VERDICT: DECLINING

8. PLAN FOR NEXT WEEK

Programme week: W4 (Week 4 of PPL x2)

MONDAY -- Push A (Chest primary + Shoulders + Triceps)

Bench Press (Barbell) 3 x 6 @ 62.5kg [+2.5kg; best this week 60kg x 6]

Incline Bench Press (Dumbbell) 3 x 10 @ 19kg [5% drop from 20kg; rep collapse 12->8 Fri 05 Jun]

Chest Fly (Machine) 3 x 12 @ 46.25kg [+1.25kg; all 3 sets hit 45kg on 25 May]

Face Pull 3 x 12 @ 26kg [+1.25kg; rear delt corrective -- do not skip]

Lateral Raise (Dumbbell) 3 x 12 @ 11.25kg [+1.25kg; all 3 sets hit 10kg x 12 Mon 08 Jun]

Triceps Rope Pushdown 3 x 9 @ 24kg [+1.25kg from 22.7kg; all sets hit 25 May]

Dead Bug 3 x 10 -- do not skip (T8-T12 kyphosis corrective)

Watch-point: Bench is tracking upward -- hold 62.5kg for all 3 working sets; do not attempt heavier singles. Session must finish within 55 minutes.

TUESDAY -- Pull A (Back compound + Biceps)

Pull Up 4 x 6 @ 0kg [rep collapse 8->4 on 08 Jun; rebuild to 6 clean reps. If 6 reps can't be hit, sub

Lat Pulldown (Cable) 3 x 12 @ 52kg]

Dumbbell Row 3 x 12 @ 22.5kg [+2.5kg; all sets hit 20kg on 26 May]

Shrug (Smith Machine) 3 x 12 @ 72.5kg [+2.5kg; all sets hit 70kg on 26 May]

Face Pull 3 x 15 @ 26kg [+1.25kg; rear delt mandatory on Pull days]

Hammer Curl (Dumbbell) 3 x 10 @ 13.75kg [+1.25kg; all sets hit 12.5kg on 18 May]

Seated Incline Curl (Dumbbell) 3 x 10 @ 7.5kg [maintain; only 2 sets logged 26 May -- hit 3]

Dead Bug 3 x 10 -- do not skip

Watch-point: Session note on 08 Jun says "brachialis fails before lats". Before each Pull Up set, actively engage lats with a 2-second isometric hang before pulling. If arms fatigue first every set, switch to Lat Pulldown this week to preserve lat stimulus.

WEDNESDAY -- Legs A (Quads + Hamstrings + Glutes)

Hip Thrust (Machine) 3 x 13 @ 22.5kg [+2.5kg; all sets hit 20kg on 13 May -- MANDATORY APT correction -- start here]

Leg Press (Machine) 3 x 9 @ 66.5kg [5% drop from 70kg; reps fell 12->9 vs 27 May]

Seated Leg Curl (Machine) 3 x 9 @ 45.5kg [+2.5kg; all sets hit 43kg on 27 May]

Romanian Deadlift (Dumbbell) 3 x 11 @ 40kg [maintain; all sets hit 27 May]

Dead Bug 3 x 16 -- do not skip (mandatory on Legs sessions)

Bird Dog 2 x 16 -- post warm-up, before working sets

Watch-point: Hip Thrust must come FIRST in the working set order, not last. If the Hip Thrust machine is occupied, use barbell Hip Thrust on a bench -- do not skip it.

THURSDAY -- Push B (Shoulders primary + Chest variation + Triceps)

Seated OHP (Dumbbell) 4 x 10 @ 20kg [+2.5kg compound; all sets hit 17.5kg 28 May]
 Lateral Raise (Dumbbell) 3 x 12 @ 11.25kg [V-TAPER KPI -- log weight + reps every set]
 Upright Row (Cable) 3 x 10 @ 18.1kg [maintain; all sets hit 28 May]
 Face Pull 3 x 15 @ 26kg [rear delt mandatory on all Push sessions]
 Chest Supported Y Raise (DB) 3 x 12 @ 6kg [+1kg from 5kg; all sets hit 28 May]
 Overhead Triceps Ext (Cable) 3 x 11 @ 24kg [maintain; Set 1 on 28 May logged 111 reps --
 verify the log entry and correct it]
 Dead Bug 3 x 10 -- do not skip
 Bird Dog 2 x 16

Watch-point: Shoulders are primary today. Do NOT add bench press or incline press work --
 Monday's Push A already covered chest; doubling up compresses the recovery window.

FRIDAY -- Pull B (Back + Rear Delts + Biceps -- rear delts mandatory)

Romanian Deadlift (Barbell) 3 x 8 @ 60kg [maintain; first logged session -- consolidate
 form

before loading further]

Seated Cable Row - V Grip 3 x 8 @ 66.5kg [5% drop; 70kg x 8 on Fri 05 Jun vs prior 77kg
 x 10

signals a strength dip -- rebuild before

loading]

Face Pull 3 x 15 @ 26kg [MANDATORY rear delt -- 7 of 8 weekly sets
 here]

Rear Delt Reverse Fly (Machine) 4 x 11 @ 47.5kg [5% drop from 50kg; not trained for 3+ weeks]

Hammer Curl (Dumbbell) 3 x 10 @ 13.75kg [same as Tuesday; two sessions/week is fine]

Dead Bug 3 x 10 -- do not skip

Watch-point: 8 rear delt sets are needed this week. This session must contain BOTH Face
 Pull AND Rear Delt Reverse Fly -- neither is optional. No substitutions.

SATURDAY -- Legs B (Glutes + Hamstrings + Single-Leg + Rack Pull)

Hip Thrust (Machine) 3 x 13 @ 22.5kg [MANDATORY APT -- same as Wednesday
 progression]

Rack Pull 3 x 5 @ 70kg [maintain; consolidate form before adding
 weight]

Single Leg Press (Machine) 3 x 12 @ 0kg [bodyweight; build to 12 clean reps each leg
 before adding load]

Seated Leg Curl (Machine) 3 x 9 @ 45.5kg [same as Wednesday]

Dead Bug 3 x 10 -- do not skip

Watch-point: Saturdays have been skipped two consecutive weeks. This 40-minute session
 exists primarily for Hip Thrust and posterior chain balance. If time is genuinely short,
 drop Single Leg Press -- Hip Thrust and Rack Pull are non-negotiable.
