

30-Day Analysis Report

This week : 20 May to 27 May 2026

ATHLETE PROFILE

Name: Ganesh
Profile: 44M | 181 cm | 87 kg -> 79 kg
Goal: Body Recomposition -- Fat loss, muscle preservation
Pace: 0.5 kg/week | 15% calorie deficit

Generated on 2026-05-26

WEEKLY TRAINING REPORT

Generated : 2026-05-27 05:01 IST
User : Ganesh | 44M | 181cm | 87kg -> 79kg
This week : 20 May to 27 May 2026

1. THIS WEEK AT A GLANCE

Sessions : 2 of 5 target
Prior 3 weeks: 7, 5, 6 sessions (avg 6.0)
Overall score: 3/10 -- Below par -- low sessions or major muscle imbalances this week.
Biggest win : Shrug (Smith Machine) -- 70kg x 12 reps (e1RM 98.0kg)
Biggest concern: Legs -- 0 sets vs 14 target (14 sets short)
vs last week : Volume DOWN 76% (11,330 vs 46,591 kg*reps)

2. THIS WEEK -- SESSION BY SESSION

Session 1: Monday 25 May 2026 08:12 IST | 84 min
Type : Monday - Push A (Chest)
Volume : 5,489 kg*reps | 29 sets
Stretching: 0kg x 0r x 1 sets (e1RM 0.0kg)
Superman: 0kg x 10r x 2 sets (e1RM 0.0kg) [FLAG: 0kg logged]
Bird Dog: 0kg x 16r x 2 sets (e1RM 0.0kg) [FLAG: 0kg logged]
Warm Up: 0kg x 0r x 1 sets (e1RM 0.0kg)
Band Pullaparts: 0kg x 20r x 1 sets (e1RM 0.0kg) [FLAG: 0kg logged]
Warm Up: 0kg x 0r x 1 sets (e1RM 0.0kg)
... and 8 more exercises

Session 2: Tuesday 26 May 2026 10:14 IST | 118 min
Type : Tuesday - Pull A (Back + Traps)
Volume : 5,840 kg*reps | 32 sets
Stretching: 0kg x 0r x 1 sets (e1RM 0.0kg)
Superman: 0kg x 10r x 2 sets (e1RM 0.0kg) [FLAG: 0kg logged]
Bird Dog: 0kg x 16r x 2 sets (e1RM 0.0kg) [FLAG: 0kg logged]
Dead Hang: 0kg x 0r x 2 sets (e1RM 0.0kg)
Warm Up: 0kg x 0r x 1 sets (e1RM 0.0kg)
Stretching: 0kg x 0r x 1 sets (e1RM 0.0kg)
... and 9 more exercises

4-WEEK VOLUME TREND

Wk -3 (29 Apr-06 May): [#####] 53,504 kg*reps 7 sess
Wk -2 (06 May-13 May): [#####.....] 40,647 kg*reps 5 sess
Wk -1 (13 May-20 May): [#####...] 46,591 kg*reps 6 sess
This wk (20 May-27 May): [####.....] 11,330 kg*reps 2 sess

3. STRENGTH -- HOW ARE THE LIFTS MOVING?

e1RM = estimated 1-rep max (formula: weight x (1 + reps / 30))

[C] = compound lift | [I] = isolation

[C] Bench Press (Barbell)

Best this week : 40kg x 8 reps (e1RM 50.7kg)

vs prior : First time in 30-day log

Next session : 40kg x 8 reps

[C] Dumbbell Row

Best this week : 20kg x 12 reps (e1RM 28.0kg)

vs prior : First time in 30-day log

Next session : 20kg x 12 reps

[C] Incline Bench Press (Dumbbell)

Best this week : 20kg x 12 reps (e1RM 28.0kg)

vs prior : DOWN -3.5kg vs 16 May

Next session : 19.0kg x 12 reps

[C] Pull Up (Weighted)

Best this week : 0kg x 8 reps (e1RM 0.0kg)

vs prior : First time in 30-day log

Next session : 0kg x 8 reps

* FLAGS: 0kg logged -- check entry

[I] Band Pullaparts

Best this week : 0kg x 20 reps (e1RM 0.0kg)

vs prior : First time in 30-day log

Next session : 0kg x 20 reps

* FLAGS: 0kg logged -- check entry

[I] Bird Dog

Best this week : 0kg x 16 reps (e1RM 0.0kg)

vs prior : First time in 30-day log

Next session : 0kg x 16 reps

* FLAGS: 0kg logged -- check entry

[I] Chest Fly (Machine)

Best this week : 45kg x 12 reps (e1RM 63.0kg)

vs prior : DOWN -8.1kg vs 16 May

Next session : 42.75kg x 12 reps

[I] Chest Supported Y Raise (Dumbbell)

Best this week : 5kg x 12 reps (e1RM 7.0kg)

vs prior : First time in 30-day log

Next session : 5kg x 12 reps

[I] Dead Hang

Best this week : 0kg x 0 reps (e1RM 0.0kg)

vs prior : First time in 30-day log

Next session : 0kg x 0 reps

[I] Face Pull

Best this week : 24.9kg x 15 reps (e1RM 37.3kg)

vs prior : DOWN -2.5kg vs 11 May

Next session : 23.65kg x 15 reps

[I] Lateral Raise (Dumbbell)

Best this week : 10kg x 12 reps (e1RM 14.0kg)

vs prior : DOWN -3.9kg vs 05 May

Next session : 9.5kg x 12 reps

[I] Rack Pull

Best this week : 70kg x 5 reps (e1RM 81.7kg)

vs prior : First time in 30-day log

Next session : 70kg x 5 reps

* FLAGS: weight drop (70kg->50kg)

[I] Seated Incline Curl (Dumbbell)

Best this week : 7.5kg x 10 reps (e1RM 10.0kg)

vs prior : First time in 30-day log

Next session : 7.5kg x 10 reps

[I] Shrug (Smith Machine)

Best this week : 70kg x 12 reps (e1RM 98.0kg)

vs prior : SAME as 11 May

Next session : 70kg x 12 reps

[I] Stretching

Best this week : 0kg x 0 reps (e1RM 0.0kg)

vs prior : First time in 30-day log

Next session : 0kg x 0 reps

[I] Superman

Best this week : 0kg x 10 reps (e1RM 0.0kg)

vs prior : First time in 30-day log

Next session : 0kg x 10 reps

* FLAGS: 0kg logged -- check entry

[I] Triceps Rope Pushdown

Best this week : 22.7kg x 9 reps (e1RM 29.5kg)

vs prior : First time in 30-day log

Next session : 22.7kg x 9 reps

[I] Warm Up

Best this week : 0kg x 0 reps (e1RM 0.0kg)

vs prior : First time in 30-day log

Next session : 0kg x 0 reps

4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest | 12 | 12 | 0 | OK

Back | 7 | 14 | 7 | CRITICAL

Shoulders | 3 | 10 | 7 | CRITICAL

Traps | 3 | 6 | 3 | LOW

Rear Delts		6		8		2		LOW
Biceps		2		8		6		CRITICAL
Triceps		3		8		5		CRITICAL
Legs		0		14		14		CRITICAL
Core		0		6		6		CRITICAL

Push sets: 18 | Pull sets: 18 | Ratio pull:push = 1.00 (OK -- balanced)

Rear delts: 6 sets this week (need 8+/week)

SHORT by 2 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 3 sets this week (need 6+/week)

SHORT by 3 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Enough work this week: Chest

Short this week : Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 2 of 5 target

Wk -3 (29 Apr-06 May): 7 sessions

Wk -2 (06 May-13 May): 5 sessions

Wk -1 (13 May-20 May): 6 sessions

Time between sessions this week:

Mon 25 May 08:12 -> Tue 26 May 10:14: 26h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Mon 25 May + Tue 26 May (26h apart): overlap = chest, other, rear_delts

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
--------	---------	-----	--------

Chest	12	8	OK
Back	7	10	AT RISK
Shoulders	3	8	AT RISK
Traps	3	4	AT RISK
Rear Delts	6	6	OK
Biceps	2	6	AT RISK
Triceps	3	6	AT RISK
Legs	0	10	AT RISK
Core	0	4	AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Back, Shoulders, Traps, Biceps, Triceps, Legs, Core

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 17 Jun 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week: W1 (started 2026-05-24; days elapsed = 2, rounded up = Week 1)

Sessions this week: 2 of 6 target (week still in progress -- Wed-Sat sessions remain)

Day	Expected	Detected	Status
* +-----+			

Mon 25 May | Push A | Push A (Chest) | OK

Tue 26 May | Pull A | Pull A (Back + Traps) | OK

Adherence: 100% (2 of 2 completed sessions on correct day)

Note: 4 sessions remain this week (Legs A Wed, Push B Thu, Pull B Fri, Legs B Sat).

Assessed only on sessions logged to date.

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 0 legs sessions logged this week

* Legs A due Wednesday 27 May; Hip Thrust MANDATORY per APT correction protocol.

Core stabiliser (all sessions): 2 of 2 sessions -- OK

* Mon 25 May: Bird Dog 2x16 + Superman 2x10 (both present)

* Tue 26 May: Bird Dog 2x16 + Superman 2x10 (both present)

Rear delt work in Pull sessions: 1 of 1 pull sessions -- OK

* Tue 26 May: Face Pull 3x15 @ 24.9kg + Chest Supported Y Raise 3x12 @ 5kg

Sessions over 60 min: BOTH sessions flagged

* Mon 25 May (Push A): 84 min (24 min over limit)

* Tue 26 May (Pull A): 118 min (58 min over limit -- nearly 2x the cap)

LATERAL RAISE (V-TAPER KPI):

This week : 10.0kg x 12 reps | Prior week : 12.5kg x 13 reps | Trend: DOWN

* Dropped 2.5kg and 1 rep vs prior week (16 May: 12.5kg x 13).

* Likely reflects gym change (new barbell facility) and conservative reset.

* Must return to 12.5kg next Push A session.

7. KEY INSIGHTS

RECOVERY AT 44

This week produced exactly one session pair: Push A (Mon 25 May, 08:12) into Pull A (Tue 26 May, 10:14) -- a gap of just 26h 02min. The 48h minimum for muscle repair at age 44 was not cleared by 22 hours. The specific overlap is rear deltoids: Face Pull was programmed in both sessions (24.9kg x 12 in Push A; 24.9kg x 15 in Pull A). Rear delt fibres need full 48-72h to consolidate protein synthesis after an isolation stimulus. At 26h the tissue is still in active repair -- loading it again adds fatigue without adding stimulus. For W2, Face Pull belongs only in Pull sessions; if used correctively in Push, reduce sets to 2 and treat it as flush work only. Every remaining session pair in W1 (Legs A Wed -> Push B Thu: 24h gap if both hit morning) must respect the same rule.

PPL ADHERENCE & PROGRAMME AGE

Adherence is 100% on sessions attempted (2 of 2). This is W1 of the PPL x2 programme (programme age: 2 days as of today). No pattern of missed days can be assessed yet -- the data simply does not exist. The critical test comes Wednesday (Legs A -- historically a skipped day in the old pre-PPL logs) and Saturday (Legs B -- Lower Body sessions were logged on Saturdays in prior weeks so that habit exists). Zero missed sessions allowed in W1 to establish the neural pattern. Target: 6 of 6 by Sunday 31 May.

CORRECTIVE COMPLIANCE

Hip thrust hit rate: 0 of 0 legs sessions (N/A -- no Legs day yet in W1). However, this is the highest-risk corrective to skip; Anterior Pelvic Tilt stresses the lumbar spine on every squat and deadlift rep, and Hip Thrust is the primary corrective. MUST appear in Wed Legs A and Sat Legs B -- no exceptions. Core stabiliser (Dead Bug / Bird Dog) presence: 100% -- both Push A and Pull A included Bird Dog 2x16 and Superman 2x10. Rear delt set count: 6 sets this week vs 8-set target -- 2 short. To understand the risk: the front deltoid handles 70-80% of the load in a shoulder press. If rear delts (and external rotators) stay significantly weaker, they cannot stabilise the humeral head in the glenoid socket during that load. At 44, the supraspinatus tendon is already showing age-related collagen changes. Chronic front-dominant imbalance means the tendon gets pinched under the acromion on every press rep -- this is subacromial impingement. It starts as a catching sensation in overhead movements and progresses to a partial tear within 2-3 years if unaddressed. Getting to 8+ rear delt sets per week is protective insurance.

LATERAL RAISE TREND -- V-TAPER KPI

The V-taper KPI moved DOWN this week: 10kg x 12 vs 12.5kg x 13 the prior week (-2.5kg, * 1 rep). This matters more for Ganesh than for most lifters because the love handles sit exactly at lat-width level -- visually, the waist and the lats form one continuous block instead of a V. The only way to shift that ratio without surgery is to build the deltoid

cap wider. Lateral raises are the single most targeted tool for this. A 2.5kg regression stalls the V-taper goal. The 10kg session was technically clean (3x12 consistent), so the progression rule calls for a jump to 12.5kg next Push A -- returning to the prior best. If the gym switch forced the reset, that context is understood, but 12.5kg x 12 must be the W2 Push A target.

HARD FLAGS

1. Session duration -- BOTH sessions this week exceeded 60 min: Push A ran 84 min (24 min over), Pull A ran 118 min (58 min over -- nearly 2x the cap). An overlong session raises cortisol, which in a deficit actively breaks down muscle for fuel. Supersets and tighter rest intervals (90s compound, 60s isolation) are the fix.
2. Rear delt trained 26h after previous stimulus (face pull in Push A -> face pull in Pull A). Under-recovery adds fatigue, not size.
3. Lateral Raise dropped from 12.5kg to 10kg -- V-taper KPI moving in the wrong direction.
4. Rack Pull weight collapse within same session: 70kg x 5 set 1, then crashed to 50kg x 8 for sets 2-3. A 20kg intra-session drop signals the opener was too heavy. Correct approach: pick a weight all 3 sets can complete (60kg x 8 is the W2 starting point).
5. Pull A lasted 118 min for 32 sets including warm-up and cool-down -- averaging 3.7 min per set is far above optimal. Long rests inflate duration without extra stimulus.

OVERALL VERDICT

This is Day 2 of a new structured programme -- direct week-on-week comparison to the prior week (6 sessions, 46,591 kg*reps) is misleading because the current week is incomplete. What can be assessed: the NEW programme structure is CORRECT (proper PPL titles, Bird Dog in every session, deliberate warm-up), strength numbers are competitive with prior weeks on compound lifts, and rear delt work is included. The red flags are exclusively session management (duration, rest intervals, lateral raise regression). Verdict: IMPROVING -- the programme architecture is right; execution needs tightening on session length.

8. PLAN FOR NEXT WEEK

Programme week: W2 (Week 2 of PPL x2 -- Mon 01 Jun to Sat 06 Jun 2026)

Progression rules applied: compound +2.5kg if all sets hit target reps; isolation +1.25kg if all sets hit. Drop 5% if rep collapse flagged.

Base = best logged weight from most recent session of that exercise.

MONDAY 01 JUN -- Push A (Chest + Shoulders + Triceps)

Bench Press (Barbell) 4 x 8 @ 42.5kg

(Up 2.5kg: 40kg x 8 all 4 sets clean on 25 May)

Incline Bench Press (DB) 3 x 12 @ 22.5kg

(Up 2.5kg: 20kg x 12 all 3 sets clean on 25 May)

Chest Fly (Machine) 3 x 12 @ 46kg

(Up 1kg: 45kg x 12 all 3 sets clean -- nearest machine plate)

Lateral Raise (Dumbbell) 3 x 12 @ 12.5kg

(Return to prior best: 10kg x 12 was clean but this is a reset from 12.5kg x 13 on 16 May. Hit 12.5kg x 12 for all 3 sets before jumping further.)

Face Pull (corrective) 2 x 12 @ 24.9kg

(Keep as shoulder health corrective in Push; limit to 2 sets -- not primary muscle)

Triceps Rope Pushdown 3 x 10 @ 24.9kg

(Up from 22.7kg x 9: all 3 sets hit 9 reps, +2.2kg to next cable stack)

Dead Bug 3 x 10 -- DO NOT SKIP (T8-T12 kyphosis corrective)

KEY FOCUS: Keep Push A under 60 min. Drop rest to 90s on compounds, 60s on isolation.

Lateral raise at 12.5kg is the primary number to hit this session.

TUESDAY 02 JUN -- Pull A (Back + Biceps)

Pull Up (Weighted) 4 x 8 @ 2.5kg added

(Up: bodyweight x 8 all 4 sets clean on 26 May -- add belt weight)

Dumbbell Row 3 x 12 @ 22.5kg

(Up 2.5kg: 20kg x 12 all 3 sets clean on 26 May -- first logged session)

Shrug (Smith Machine) 3 x 12 @ 72.5kg

(Up 2.5kg: 70kg x 12 all 3 sets clean on 26 May)

Face Pull (rear delt primary) 3 x 15 @ 27.2kg

(Up 2.3kg: 24.9kg x 15 all 3 sets hit on 26 May; nearest cable stack ~27.2kg)

Chest Supported Y Raise (DB) 3 x 15 @ 5kg

(Same weight, increase reps from 12 to 15 -- first session, build volume first)

Rack Pull 3 x 8 @ 60kg

(Build consistent: 70/50/50 last session was intra-session collapse. 60kg x 8 for all 3 sets -- establish solid base before loading up.)

Seated Incline Curl (DB) 3 x 10 @ 9kg

(Up 1.5kg: 7.5kg x 10, 2 sets clean on 26 May; +1.25kg = 8.75kg, round to 9kg)

Bird Dog 3 x 10 -- DO NOT SKIP (T8-T12 kyphosis corrective)

KEY FOCUS: Hard cap at 60 min -- cut rest to 90s compounds / 60s isolation.

Pull A ran 118 min last week. Supersets (Shrug + Y Raise; Curl + Bird Dog) to save time.

WEDNESDAY 03 JUN -- Legs A (Quads, Hamstrings, Glutes)

Hip Thrust (Machine) 3 x 12 @ 22.5kg -- MANDATORY (APT CORRECTION)

(Up 2.5kg: 20kg x 13 all 3 sets on 13 May)

Leg Press (Machine) 3 x 12 @ 62.5kg

(Up 2.5kg: 60kg x 12 all 3 sets on 13 May)

Romanian Deadlift (DB) 3 x 12 @ 42.5kg

(Up 2.5kg: 40kg x 11 all 3 sets on 13 May)

Sissy Squat (BW) 3 x 12 @ bodyweight

(Up 1 rep: was 11 reps on 13 May; no load added yet)

Hip Abduction (Machine) 3 x 10 @ 87.5kg

(Up 2.5kg: 85kg x 10 all 3 sets on 13 May)

Hip Adduction (Machine) 3 x 10 @ 47.5kg

(Up 2.5kg: 45kg x 10 all 3 sets on 13 May)

Dead Bug 3 x 10 -- DO NOT SKIP (T8-T12 kyphosis corrective)

KEY FOCUS: Hip Thrust goes FIRST after warm-up -- do not skip or move to end.

This is the #1 corrective for APT. Log the hip thrust set before anything else loads.

THURSDAY 04 JUN -- Push B (Shoulders primary + Chest variation + Triceps)

Seated Shoulder Press (Machine) 3 x 10 @ 82.5kg

(Up 2.5kg: 80kg x 10 all 3 sets clean on 14 May)

Chest Press (Machine) 4 x 12 @ 61.25kg

(Up 1.25kg: 60kg x 12 all 4 sets on 14 May -- isolation rule)

Lateral Raise (Machine) 3 x 9 @ 32.5kg

(Drop 5%: 35kg x 8 on set 3 on 14 May = rep collapse. $35 \times 0.95 = 33.25 \rightarrow 32.5\text{kg}$)

Triceps Pushdown 3 x 10 @ 60kg

(Hold: 60kg x 11/11/9 on 14 May -- set 3 fell off. Target clean 3x10 before adding weight. Grip tight, full extension, controlled negative.)

Bird Dog 3 x 10 -- DO NOT SKIP

Dead Bug 3 x 10 -- DO NOT SKIP

KEY FOCUS: Lateral Raise machine -- do NOT go back to 35kg yet. Build 3x10 solid at 32.5kg first, then 35kg. Shoulder press is the primary -- prioritise that stimulus.

FRIDAY 05 JUN -- Pull B (Back + Rear Delts + Biceps)

Seated Cable Row - V Grip 3 x 10 @ 80kg

(Up 2.5kg: 77kg x 10 all 3 sets on 18 May)

Pull Up (Weighted) 4 x 8 @ 2.5kg added

(Same as Tuesday -- reinforce the added-weight habit)

Face Pull (MANDATORY) 3 x 16 @ 24.9kg

(Same weight, up 1 rep: 24.9kg x 16 all 3 sets on 18 May. Hit 16 clean before adding weight. Face pull is mandatory every Pull B per rear-delt target of 8 sets/week.)

Rear Delt Reverse Fly (Machine) 4 x 10 @ 52.5kg

(Up 2.5kg: 50kg x 11 all 4 sets on 14 May -- push to 4 sets to hit rear delt target)

Bicep Curl (Machine) 3 x 10 @ 25kg

(Hold: 25kg x 12/11/10 on 14 May -- natural set-fatigue decline. Target 3x10 solid.)

Hammer Curl (Dumbbell) 3 x 12 @ 12.5kg

(Same weight, up reps: 12.5kg x 10 on 18 May. Hit 12 reps before going to 14kg.)

Bird Dog 3 x 10 -- DO NOT SKIP

KEY FOCUS: 4 sets of Rear Delt Fly is critical -- rear delt count must hit 8+ by end of Friday Pull B. Without it, the shoulder imbalance risk at 44 compounds every week.

SATURDAY 06 JUN -- Legs B (Glutes, Hamstrings, Single-Leg + Hip Thrust mandatory)

Hip Thrust (Machine) 3 x 12 @ 22.5kg -- MANDATORY (APT CORRECTION)

(Same target as Legs A -- both legs sessions must include Hip Thrust every week)

Deadlift (Trap bar) 3 x 9 @ 97.5kg

(Up 2.5kg: 95kg x 9 all 3 sets on 15 May)

Seated Leg Curl (Machine) 3 x 8 @ 45kg

(Up ~2kg: 43kg x 8 all 3 sets on 15 May; $+1.25\text{kg} = 44.25 \rightarrow 45\text{kg}$ nearest stack)

Rack Pull 3 x 8 @ 62.5kg

(Build from W2 Pull A base: 60kg x 8 all 3 sets clean there $\rightarrow$ 62.5kg here.

Rack Pull belongs in Legs B per programme -- move out of Pull A going forward.)

Bulgarian Split Squat 3 x 10 each leg @ bodyweight

(New for PPL Legs B single-leg requirement -- start bodyweight, nail form first)

Dead Bug 3 x 10 -- DO NOT SKIP

KEY FOCUS: Two Hip Thrust sessions per week (Wed + Sat) are not optional -- they are the primary mechanism to correct APT. Trap bar deadlift at 97.5kg is the strength highlight of the week; protect it with proper brace and shin-angle.

+-----+

Deload	: not yet -- next due Week 5, approx 21 Jun 2026	
Timing	: 6-9 PM IST -- no sessions after midnight	
Nutrition:	2,367 kcal/day 174g protein minimum	

+-----+
