

30-Day Period ending 2026-07-28

Name	Ganesh
Profile	44M 181 cm 87 kg -> 79 kg
Goal	Body Recomposition -- Fat loss, muscle preservation
Pace	0.5 kg/week 15% calorie deficit
Generated	2026-07-28

WEEKLY TRAINING REPORT

Generated : 2026-07-29 05:00 IST
 User : Ganesh | 44M | 181cm | 87kg -> 79kg
 This week : 22 Jul to 29 Jul 2026

1. THIS WEEK AT A GLANCE

Sessions : 0 of 5 target
 Prior 3 weeks: 5, 4, 4 sessions (avg 4.3)
 Overall score: 1/10 -- Below par -- low sessions or major muscle imbalances this week.
 Biggest win : No working sets recorded this week
 Biggest concern: Back -- 0 sets vs 14 target (14 sets short)
 vs last week : Volume DOWN 100% (0 vs 21,340 kg*reps)

2. THIS WEEK -- SESSION BY SESSION

No sessions recorded this week.

4-WEEK VOLUME TREND

Wk -3 (01 Jul-08 Jul): [#####] 22,076 kg*reps 5 sess
 Wk -2 (08 Jul-15 Jul): [#####..] 19,987 kg*reps 4 sess
 Wk -1 (15 Jul-22 Jul): [#####.] 21,340 kg*reps 4 sess
 This wk (22 Jul-29 Jul): [.....] 0 kg*reps 0 sess

3. STRENGTH -- HOW ARE THE LIFTS MOVING?

e1RM = estimated 1-rep max (formula: weight x (1 + reps / 30))
 [C] = compound lift | [I] = isolation

4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group	Sets this wk	Target/wk	Gap	Status
Chest	0	12	12	CRITICAL
Back	0	14	14	CRITICAL
Shoulders	0	10	10	CRITICAL
Traps	0	6	6	CRITICAL
Rear Delts	0	8	8	CRITICAL
Biceps	0	8	8	CRITICAL
Triceps	0	8	8	CRITICAL
Legs	0	14	14	CRITICAL
Core	0	6	6	CRITICAL
Push sets: 0 Pull sets: 0 Ratio pull:push = 0.00 (LOW -- add more pulling work)				
Rear delts: 0 sets this week (need 8+/week)				
SHORT by 8 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flies.				
Traps : 0 sets this week (need 6+/week)				
SHORT by 6 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.				

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core
Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 0 of 5 target

Wk -3 (01 Jul-08 Jul): 5 sessions

Wk -2 (08 Jul-15 Jul): 4 sessions

Wk -1 (15 Jul-22 Jul): 4 sessions

No sessions after midnight IST this week. Good.

No back-to-back same-muscle sessions this week. Good.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle This wk Min Status

Chest 0 8 AT RISK

Back 0 10 AT RISK

Shoulders 0 8 AT RISK

Traps 0 4 AT RISK

Rear Delts 0 6 AT RISK

Biceps 0 6 AT RISK

Triceps 0 6 AT RISK

Legs 0 10 AT RISK

Core 0 4 AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 3

Weeks since last deload : 3 (deload every 4 weeks)

Next deload : in 1 week(s), approx 05 Aug 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week : W10 (started 2026-05-24; 65 days elapsed, rounded up to 10 weeks)
Sessions this week : 0 of 6 target

NOTE: All 13 sessions in the 30-day log are titled 'Full Body A/B/C' or 'Chest Shoulder' -- no PPL keywords detected in any workout title.
The PPL x2 programme has not yet been adopted in Heavy session naming.
Sessions below are assessed against expected PPL day mapping.

Day	Expected	Detected	Status
-----+-----+-----+-----			
Mon 22 Jul	Push A	---	MISSED
Tue 23 Jul	Pull A	---	MISSED
Wed 24 Jul	Legs A	---	MISSED
Thu 25 Jul	Push B	---	MISSED
Fri 26 Jul	Pull B	---	MISSED
Sat 27 Jul	Legs B	---	MISSED
Sun 28 Jul	REST	---	(rest day -- expected)

Adherence: 0% (0 of 6 sessions logged this week)
This is a complete rest week -- no training at all 22-28 Jul.

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 0 legs sessions this week -- MISSING
(CRITICAL: Hip Thrust is absent across ALL 13 sessions in the 30-day log.
APT correction has never been performed since programme start.)
Core stabiliser (all sessions) : 0 of 0 sessions this week
(30-day log has Hanging Leg Raise x9 sets and Machine Crunch x6 sets,
but Dead Bug and Bird-Dog -- the mandatory T8-T12 correctives -- are
completely absent from every session in the log.)
Rear delt work in Pull sessions : 0 of 0 sessions this week -- N/A
(30-day context: Rear Delt Reverse Fly present in Full Body C sessions on
Fri 03 Jul [3 sets], Fri 10 Jul [3 sets], Fri 17 Jul [2 sets] = 8 sets
over 30 days. Meets minimum but one set was dropped last appearance.)
Sessions over 60 min this week : None (no sessions)
(30-day flags: Mon 06 Jul 97 min, Mon 13 Jul 93 min, Wed 15 Jul 93 min,
Sat 18 Jul 86 min -- four sessions exceeded the 60-min target.)

LATERAL RAISE (V-TAPER KPI):

This week (22-28 Jul) : No data (0 sessions)
Prior week (15-21 Jul): No data (Mon 20 Jul session abandoned at 16 min;
Full Body B/C and Chest Shoulder sessions this period excluded lateral raise)
Trend: N/A | Last logged: Mon 13 Jul -- 10kg x 14 reps
(Historical trend over Full Body A sessions: 29 Jun 10kgx12 -> 06 Jul
10kgx13 -> 13 Jul 10kgx14 -- consistent +1 rep/week improvement,
suggesting readiness to increase to 11.25kg when training resumes.)

7. KEY INSIGHTS

RECOVERY AT 44 (48h minimum between same-muscle sessions)
In the prior active week (15-21 Jul), the four sessions included two
back-heavy days separated by exactly 48h05min: Full Body B on Wed 15 Jul
at 08:50 (Romanian Deadlift: back/traps/legs) and Full Body C on Fri 17

Jul at 08:55 (Bent Over Row + Deadlift + Shrug: back/traps). The gap cleared the 48h minimum by only 5 minutes -- technically legal but on the absolute knife-edge. Traps received the same tight turnaround. Every other same-muscle pair in the log cleared 48h comfortably. The bigger concern is this week's 0 sessions -- after a full week off, there is no recovery risk but muscle protein synthesis drops sharply past day 5 of inactivity, meaning all muscle groups are now past the stimulus window.

PPL ADHERENCE AND PROGRAMME AGE

This is Week 10 of the PPL x2 programme (started 2026-05-24) and adherence this week is 0% -- a complete training blackout. No sessions 22-28 Jul. Looking at naming patterns across all 13 sessions in the 30-day log, Ganesh is still running a 4-day Full Body split (Mon/Wed/Fri + Sat) rather than the 6-day PPL. The PPL x2 programme has not yet been adopted in practice. The two most commonly missed days are Thursday (0 sessions in the log) and Tuesday (0 sessions), which are the Push B and Pull A days -- the programme's mid-week reinforcement sessions that are critical for volume accumulation.

CORRECTIVE COMPLIANCE

Hip Thrust (APT correction) has been logged zero times across the entire 30-day window -- a critical omission. Anterior pelvic tilt, if not addressed, shifts compressive load onto lumbar discs during squats and deadlifts; at 87kg bodyweight and age 44, this is a genuine injury risk, not a cosmetic concern. Dead Bug and Bird-Dog (T8-T12 kyphosis correction) are also absent from every session -- Hanging Leg Raise and Machine Crunch are being done instead, which do not provide the anti-extension spinal stability that lower thoracic kyphosis requires. Rear delt work hit the 8-set/30-day threshold exactly (8 sets: 3+3+2 over three Friday sessions) but with only 2 sets in the most recent outing (Fri 17 Jul), the trend is pointing downward. At 44, when front deltoid strength substantially exceeds rear delt strength, the glenohumeral head migrates anteriorly under load, creating impingement against the acromion -- the rotator cuff is then being pinched with every pressing rep. The shoulder does not warn you loudly until the damage is done.

LATERAL RAISE TREND (V-TAPER KPI)

The V-taper KPI is in a two-week standstill: no lateral raise data exists for 15-28 Jul. The underlying trend is positive -- rep count increased from 10kgx12 (Mon 29 Jun) to 10kgx13 (Mon 06 Jul) to 10kgx14 (Mon 13 Jul), a straight progression that signals readiness to move to 11.25kg. However, the significance for Ganesh specifically is that his love handles sit at lat-width level, collapsing the shoulder-to-waist visual ratio. Lateral raise progression is the primary lever to widen the shoulder silhouette above the love handle band -- two weeks of no stimulus means no progress on this priority.

HARD FLAGS

- * COMPLETE REST WEEK: 0 sessions 22-28 Jul. First full week off in the entire log. Past day 5 of no stimulus, muscle protein synthesis returns to baseline; strength retention degrades from day 10 onward. Return to the gym is now time-sensitive.
- * SESSION 13 ABANDONED (Mon 20 Jul, 16 min): Squat dropped from 80kg to 40kg (50% reduction), Bench dropped from 65kg to 40kg (38% reduction), 1 pull-up set only, then stopped. This likely signals illness, fatigue, or a significant external stressor the day before the full rest week began.
- * DURATION VIOLATIONS: Sessions 5 (97 min), 9 (93 min), 10 (93 min), 12 (86 min) all exceed the 60-min target. A 97-min session at age 44 elevates cortisol significantly past the 60-min mark, working against fat loss and muscle retention goals.
- * HIP THRUST ZERO: Mandatory APT corrective absent across all 30 days of logged training. Cannot be deferred further.
- * DEAD BUG / BIRD-DOG ZERO: Mandatory T8-T12 corrective absent across all 30 days. The substitute exercises (Hanging Leg Raise, Machine Crunch) do not address lower thoracic kyphosis.

OVERALL VERDICT: DECLINING

Volume is down 100% vs prior week (0 vs 21,340 kg*reps). Zero sessions vs 4 sessions prior week. Corrective compliance has been zero all month. Strength was trending upward before the abandonment on Mon 20 Jul and the full rest week -- the underlying capacity is there. The immediate priority is re-entry this Monday and implementing the two mandatory correctives (Hip Thrust, Dead Bug) from day one of W11.

8. PLAN FOR NEXT WEEK (W11 -- Week 11 of PPL x2)

This week was an unplanned full rest week. Return to training Monday with conservative weights -- do NOT attempt PRs. Focus on re-establishing the PPL structure and introducing mandatory correctives for the first time. Keep all sessions under 60 minutes.

DELOAD NOTE: The script flags deload as due in W10. Since this week was a complete rest week (0 sessions), it effectively served as an unplanned deload. Treat W11 as Week 1 of a new 4-week cycle. Next formal deload: Week 14, approx 18 Aug 2026.

MONDAY -- Push A (Chest + Shoulders + Triceps)

Bench Press (Barbell) 4 x 6 @ 62.5kg

(Last good: 65kg x 7 x 3 sets on Mon 13 Jul; drop 5% after full rest week and abandoned session -- 62.5kg re-establishes the pattern safely)

Incline Chest Press (Machine) 3 x 10 @ 31.25kg

(Last: 30kg x 11 x 3 sets on Sat 18 Jul; all sets exceeded target, +1.25kg)

Lateral Raise (Dumbbell) 3 x 12 @ 11.25kg

(Last: 10kg x 14 x 3 sets on Mon 13 Jul; three consecutive weeks of

+1 rep at 10kg -- ready to increase weight; target 12 reps at 11.25kg)

Triceps Pushdown 3 x 10 @ 27.2kg

(Last: 27.2kg x 11 x 3 sets on Wed 15 Jul; maintain weight, reset reps to 10 as re-entry baseline)

Dead Bug 3 x 10 @ bodyweight -- DO NOT SKIP
 (Mandatory T8-T12 kyphosis corrective; has never been performed; add at the END of warm-up, before first working set)
 Key focus: Keep session under 60 min. Dead Bug before any pressing.

TUESDAY -- Pull A (Back compound + Biceps)

Bent Over Row (Barbell) 3 x 6 @ 70kg
 (Last: 70kg x 7 x 3 sets on Fri 17 Jul; maintain after rest week; progress to 72.5kg next week if all sets hit 8 reps)
 Pull Up (Bodyweight) 3 x 6 @ BW
 (Consistent at 6 reps; aim for 7 reps per set; no added weight yet)
 Bicep Curl (Dumbbell) 3 x 10 @ 10kg
 (Oscillated between 7.5kg and 10kg; standardise at 10kg x 10 reps)
 Bicep Curl (Machine) 3 x 10 @ 25kg
 (Last: 25kg x 10 x 3 sets on Sat 18 Jul; maintain; +1.25kg next week if all sets hit 10)
 Dead Bug 3 x 10 @ bodyweight -- DO NOT SKIP
 Key focus: Pull before biceps -- back must be the primary driver.

WEDNESDAY -- Legs A (Quads, Hamstrings, Glutes)

Hip Thrust (Barbell) 3 x 10 @ 40kg -- MANDATORY APT CORRECTION
 (Never logged before; conservative start; set up with barbell across hips on bench; squeeze glutes hard at top; do this FIRST in session)
 Squat (Barbell) 3 x 5 @ 75kg
 (Last good: 80kg x 5 x 2 sets on Mon 13 Jul -- only 2 sets that day; drop 5% to 75kg for 3 full sets to rebuild pattern after rest week)
 Leg Extension (Machine) 3 x 10 @ 77kg
 (Last: 77kg x 10 x 3 sets on Wed 15 Jul; maintain; +1.25kg next session if all sets clean)
 Dead Bug 3 x 10 @ bodyweight -- DO NOT SKIP
 Key focus: Hip Thrust must be FIRST working exercise, not saved for later.

THURSDAY -- Push B (Shoulders + Chest variation + Triceps)

Seated Shoulder Press (Machine) 3 x 8 @ 92.5kg
 (Last: 90kg x 8 x 3 sets on Sat 18 Jul; all sets hit target; +2.5kg)
 Overhead Press (Barbell) 3 x 6 @ 47.25kg
 (Last: 47.25kg x 6 x 2 sets on Wed 15 Jul; maintain weight, complete 3 full sets; +2.5kg to 49.75kg when 3x6 is clean)
 Chest Fly (Machine) 3 x 10 @ 65kg
 (Last: 65kg x 10 x 3 sets on Sat 18 Jul; maintain after rest week; +1.25kg to 66.25kg next week)
 Skullcrusher (Dumbbell) 3 x 10 @ 20kg
 (Last: 20kg x 12 x 3 sets on Sat 18 Jul; maintain weight, reduce target to 10 for re-entry; +1.25kg when 3x12 consistent again)
 Dead Bug 3 x 10 @ bodyweight -- DO NOT SKIP
 Key focus: Shoulder press FIRST. Do not exceed 60 min -- drop Skullcrusher set 3 if time is running short rather than skip Dead Bug.

FRIDAY -- Pull B (Back + Rear Delts + Biceps)

Deadlift (Barbell) 3 x 5 @ 77.5kg

(Last: 80kg x 7 x 3 sets on Fri 17 Jul; drop 5% after rest week; rebuild to 80kg+ over 2 sessions)

Face Pull (Cable) 3 x 15 @ 15kg -- MANDATORY REAR DELT
(Never logged; conservative start; perform before Rear Delt Fly; critical for rotator cuff health given front/rear delt imbalance)

Rear Delt Reverse Fly (DB) 3 x 12 @ 10kg
(Last: 10kg x 13 x 2 sets on Fri 17 Jul; dropped to 2 sets; back to 3 sets before any weight progression)

Shrug (Barbell) 3 x 12 @ 70kg
(Last: 70kg x 12/11/11 on Fri 17 Jul; rep dropped on sets 2-3; same weight; focus on full range and 1-second hold at top)

Dead Bug 3 x 10 @ bodyweight -- DO NOT SKIP

Key focus: Face Pull is non-negotiable. At 44 with pressing imbalance, the rear delt is the joint's long-term insurance policy.

SATURDAY -- Legs B (Glutes, Hamstrings, Single-Leg, Rack Pull)

Hip Thrust (Barbell) 3 x 10 @ 40kg -- MANDATORY APT CORRECTION
(Same as Wednesday Legs A -- establish pattern before loading)

Romanian Deadlift (Barbell) 3 x 8 @ 75kg
(Last: 75kg x 8 x 3 sets on Wed 15 Jul; maintain after rest week; +2.5kg to 77.5kg next session when all sets hit 8)

Bulgarian Split Squat (BW) 3 x 8 each leg @ bodyweight
(Not previously logged; conservative start; rear foot elevated on bench; front shin vertical; this is the single-leg pattern Legs B requires)

Rack Pull (Barbell) 3 x 6 @ 60kg
(Not previously logged; conservative start; set rack pin just above knee; treat as partial deadlift for posterior chain reinforcement)

Dead Bug 3 x 10 @ bodyweight -- DO NOT SKIP

Key focus: Hip Thrust first. Two new exercises this session (Split Squat, Rack Pull) -- prioritise form over load entirely. Keep to 55 min.

+-----+

Deload : Not needed -- this week WAS the unplanned deload.
Next formal deload: Week 14, approx 18 Aug 2026
Timing : 6-9 PM IST -- no sessions after midnight
Nutrition: 2,367 kcal/day 174g protein minimum

+-----+
