4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest | 11 | 12 | 1 | LOW

Back | 15 | 14 | -1 | OK

Shoulders | 12 | 10 | -2 | OK

Traps | 13 | 6 | -7 | OK

Rear Delts | 7 | 8 | 1 | LOW

Biceps | 6 | 8 | 2 | LOW

Triceps | 6 | 8 | 2 | LOW

Legs | 24 | 14 | -10 | OK

Core | 12 | 6 | -6 | OK

Push sets: 29 | Pull sets: 41 | Ratio pull:push = 1.41 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 13 sets this week (need 6+/week)

OK.

Enough work this week: Back, Shoulders, Traps, Legs, Core

Short this week : Chest, Rear Delts, Biceps, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (11 Apr-18 Apr): 6 sessions

Wk -2 (18 Apr-25 Apr): 5 sessions

Wk -1 (25 Apr-02 May): 5 sessions

Time between sessions this week:

Sat 02 May 08:25 -> Mon 04 May 08:00: 48h

Mon 04 May 08:00 -> Tue 05 May 08:30: 25h

Tue 05 May 08:30 -> Wed 06 May 07:48: 23h

Wed 06 May 07:48 -> Fri 08 May 08:44: 49h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Sat 02 May + Mon 04 May (48h apart): overlap = back, core, traps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	11	8	OK
Back	15	10	OK
Shoulders	12	8	OK
Traps	13	4	OK
Rear Delts	7	6	OK
Biceps	6	6	OK
Triceps	6	6	OK
Legs	24	10	OK
Core	12	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 30 May 2026

7. KEY INSIGHTS

RECOVERY AT 44

At 44, muscle tissue needs 48-72 hours to complete protein synthesis and repair

micro-tears before it can be effectively loaded again. Training a muscle in the repair window adds fatigue rather than stimulus and raises injury risk. This week had two close consecutive sessions: Mon 04 May (Pull -- back, traps, rear delts, biceps) followed 25h later by Tue 05 May (Push -- chest, shoulders, triceps). Those sessions hit largely different muscle groups, so the gap is acceptable. However, Sat 02 May (Lower -- back, traps, core) was followed only 48h later by Mon 04 May (Pull -- back, traps), placing back and traps at the low end of the recovery window. Over 4 weeks this is manageable; consistently training back/traps under 48h apart will accumulate fatigue and eventually degrade strength.

REAR DELT AND TRAP BALANCE

The shoulder joint is stabilised by a ring of muscles: anterior (front) deltoid, lateral deltoid, and -- critically -- rear deltoid and rotator cuff. When the front and lateral fibres dominate because they get more volume, the humeral head is pulled forward in the socket. Over months this causes impingement, rotator cuff fraying, and AC joint pain. This week traps are well above target (13 sets vs 6 needed) but rear delts came in at 7 sets vs a target of 8 -- a small but persistent gap. Rear delts received work through Face Pulls (3 sets) and Rear Delt Reverse Fly (4 sets on Friday). Adding one extra set of face pulls on any session brings this into compliance without adding meaningful fatigue.

RED FLAGS THIS WEEK

1. Rep collapse on Deadlift (Trap bar): Logged 80kg x 12 reps in the warm-up set then dropped to 90kg x 8 reps (working sets), noted as 12->8 in the report. Jumping load and dropping reps simultaneously suggests the 90kg working weight is at or near technical limit -- attempt 92.5kg next session but watch closely for form breakdown.
2. Rep collapse on Lateral Raise (Machine): 35kg x 9 reps on sets 1-2, then only 6 reps on set 3 -- a 33% drop. The weight has increased +8kg e1RM vs 5 weeks ago, suggesting the load outpaced technique. Hold at 35kg until all 3 sets hit 9+.
3. Triceps Pushdown anomaly (-39.8kg e1RM vs prior): The Push session (Tue 05 May) used 27.2kg, while the prior logged entry used 40-50kg. This is most likely a different equipment stack (Cult vs Drona gym). Not a true strength loss -- but log the gym name in notes to avoid misleading comparisons.

OVERALL TREND

Positive. This week's volume (42,728 kg*reps, 5 sessions) is the highest of the 4-week window and up 5% on last week (40,754 kg*reps). Session count is consistent at 5/week for three consecutive weeks. Compound lifts are trending upward: trap-bar deadlift e1RM has risen from 91.0kg (11 Apr) to 114.0kg this week. The trajectory is on track for the 87->79kg body recomposition goal provided protein and calorie targets are maintained.
