4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group	Sets this wk	Target/wk	Gap	Status
-----+-----+-----+-----+-----				
Chest	0	12	12	CRITICAL
Back	5	14	9	CRITICAL
Shoulders	3	10	7	CRITICAL
Traps	0	6	6	CRITICAL
Rear Delts	3	8	5	CRITICAL
Biceps	6	8	2	LOW
Triceps	3	8	5	CRITICAL
Legs	9	14	5	CRITICAL
Core	0	6	6	CRITICAL

Push sets: 6 | Pull sets: 14 | Ratio pull:push = 2.33 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 0 sets this week (need 6+/week)

SHORT by 6 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 2 of 5 target

Wk -3 (24 Jul-31 Jul): 0 sessions

Wk -2 (31 Jul-07 Aug): 2 sessions

Wk -1 (07 Aug-14 Aug): 2 sessions

Time between sessions this week:

Fri 14 Aug 08:49 -> Wed 19 Aug 09:12: 120h

No sessions after midnight IST this week. Good.

No back-to-back same-muscle sessions this week. Good.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle This wk Min Status

Chest 0 8 AT RISK

Back 5 10 AT RISK

Shoulders 3 8 AT RISK

Traps 0 4 AT RISK

Rear Delts 3 6 AT RISK

Biceps 6 6 OK

Triceps 3 6 AT RISK

Legs 9 10 AT RISK

Core 0 4 AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Triceps, Legs, Core

These are not getting enough signal to hold on to muscle during a deficit.
Add sets for these in the next 1-2 sessions.

Active training weeks logged : 6
Weeks since last deload : 6 (deload every 4 weeks)

*** DELOAD THIS WEEK ***

Cut all sets to 2 per exercise. Keep weights the same.
Deload weeks let joints and connective tissue recover.
You will come back stronger after the deload.

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week: W13 (started 2026-05-24; 89 days elapsed = 12.7 weeks, rounded up)
Sessions this week: 2 of 6 target

Day	Expected	Detected	Status
-----+-----+-----+-----			
Fri 14 Aug	Pull B	INFERRED Pull	OK
	(Row, Pulldown, Rear Delt)		
Wed 19 Aug	Legs A	INFERRED Push/Legs mix	WRONG
	(OHP, Triceps + LegCurl,		
	LegExt, BicepCurl)		

Missing sessions this week:
Mon 17 Aug -- Push A -- NO SESSION
Tue 18 Aug -- Pull A -- NO SESSION
Thu 20 Aug -- Push B -- NO SESSION
Sat 22 Aug -- Legs B -- NO SESSION (not reached yet)

Adherence: 50% type-match among sessions done (1 of 2)
17% completion vs programme (1 correct of 6 expected)

Note: Both sessions are titled "Full Body" -- the PPL split is not being followed. Ganesh appears to still be running a Full Body A/B/C rotation.
This must shift to PPL x2 for the programme to deliver its corrective goals.

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 0 Legs sessions completed -- MISSING entire week
(Wed 19 inferred as partial Legs -- no Hip Thrust logged)
APT correction protocol NOT executed this week.
Core stabiliser (all sessions): 0 of 2 sessions -- Dead Bug / Bird-Dog / Plank ABSENT
Rear delt work in Pull sessions: 1 of 1 pull sessions -- OK (Fri 14 had Rear Delt Reverse Fly)
Sessions over 60 min: NONE -- Fri 14 Aug: 54 min (OK), Wed 19 Aug: 32 min (OK)

LATERAL RAISE (V-TAPER KPI):

This week : NO sets logged | Prior week: 10kg x 14 reps | Trend: DOWN
Lateral Raise completely absent from this week's sessions. Missing from both Fri 14 and Wed 19. Prior week best was 10kg x 14 reps (Mon 10 Aug, Full Body A session).

7. KEY INSIGHTS

RECOVERY AT 44:

This week had two sessions: Fri 14 Aug at 08:49 IST and Wed 19 Aug at 09:12 IST -- a gap of 119 hours (4 days 23 hours). Both sessions shared leg-adjacent work (Leg Press on Fri, Leg Curl and Leg Extension on Wed), and the secondary bicep load from Friday's rows and pulldowns preceded Wednesday's direct Barbell Curl by the same 119h. Every same-muscle pair cleared the 48-hour minimum comfortably. Recovery is not the limiting factor this week -- frequency is.

PPL ADHERENCE AND PROGRAMME AGE:

This is Week 13 of the PPL x2 programme (started 2026-05-24). Adherence is 2 of 6 sessions = 33%, identical to the two prior weeks. The critical pattern: sessions are still being logged as "Full Body A / B / C" -- Ganesh is not running the PPL split at all. Monday Push A, Tuesday Pull A, Thursday Push B, and Saturday Legs B were all missed this week. The Full Body rotation delivers far less muscle-group specificity and cannot hit the volume targets (12 chest sets/week, 14 back sets/week, etc.) in only 2 sessions. The primary fix is simple: rename and restructure sessions to PPL.

CORRECTIVE COMPLIANCE:

Hip Thrust hit rate is 0 of 0 dedicated Legs sessions -- no Legs A or Legs B session was completed at all this week. Zero Hip Thrust means zero APT correction. Anterior pelvic tilt causes the lumbar spine to remain in constant hyperextension, increasing compressive load on L4-L5 and L5-S1 discs. At 44, this is not a cosmetic issue. Core stabiliser presence is 0 of 2 sessions -- no Dead Bug, Bird-Dog, or Plank logged in either session. T8-T12 kyphosis correction requires daily activation of the deep spinal stabilisers; at 0%, the thoracic curve is not being challenged. Rear delt sets this week: 3 sets vs 8+ target (short by 5 sets). At 44, if the anterior deltoid (trained heavily by OHP in both sessions) significantly outpaces the posterior deltoid, the humeral head migrates forward in the socket under load. This increases friction on the supraspinatus tendon -- the most commonly torn rotator cuff muscle -- and leads to impingement syndrome, which presents as pain on overhead movements and eventually restricts the OHP entirely. Adding Rear Delt Fly or Face Pull to every session is not optional at this age and training profile.

LATERAL RAISE TREND (V-TAPER KPI):

Lateral Raise is completely absent this week (0 sets vs 10kg x 14 reps prior week). Trend: DOWN. Ganesh's love handles currently sit at the same horizontal level as the lats, which collapses the visual V-taper. The lateral raise is the primary exercise that widens the shoulder silhouette above the love handle line. Every week without lateral raise progression is a week the V-taper ratio does not improve. This exercise must appear in Push A (Monday) and Push B (Thursday) every week without exception.

HARD FLAGS:

1. Leg Extension: DOWN -30.1kg e1RM this week (50kg x 12 = e1RM 70.0kg) vs prior week (77kg x 9 = e1RM 100.1kg). A 30% e1RM drop in one week indicates either form breakdown at 77kg, fatigue carry-over, or an equipment change. Investigate before returning to 77kg.
2. Seated Leg Curl: rep collapse 9 -> 6 in Set 3 on 19 Aug. Weight too high for

- 3-set consistency. Drop to 34kg next session (5% deload rule applied).
3. Core exercises ABSENT in both sessions this week -- zero compliance with the T8-T12 corrective protocol for the second consecutive session on Wed 19.
4. Hip Thrust absent for the entire week -- APT correction protocol has not been executed in any session visible in the 30-day log (no Legs sessions done at all).
5. Lateral Raise absent this week (0 sets). V-taper KPI is stalling.

OVERALL VERDICT: HOLDING

Volume is marginally up 10% (9,508 vs 8,607 kg*reps) which prevents a DECLINING verdict. However, session count is unchanged at 2 of 6 (same as the two prior weeks), corrective compliance is WORSE (core absent in both sessions; Hip Thrust absent for the whole week), and the Lateral Raise KPI went DOWN from 10kg x 14 to zero sets. The programme structure (Full Body vs PPL) remains the root issue. Without fixing that, volume targets will never be reached in 2 sessions/week.

8. PLAN FOR NEXT WEEK -- W14 (DELOAD)

Programme week: W14 of PPL x2 -- DELOAD WEEK

Deload protocol: 2 working sets per exercise, same weights as last session.

Compounds: no progression. Isolations: no progression.
