4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----				
Chest	3	12	9	CRITICAL
Back	8	14	6	CRITICAL
Shoulders	6	10	4	CRITICAL
Traps	0	6	6	CRITICAL
Rear Delts	3	8	5	CRITICAL
Biceps	6	8	2	LOW
Triceps	3	8	5	CRITICAL
Legs	13	14	1	LOW
Core	0	6	6	CRITICAL

Push sets: 12 | Pull sets: 17 | Ratio pull:push = 1.42 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 0 sets this week (need 6+/week)

SHORT by 6 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core
 Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target
 Wk -3 (02 Aug-09 Aug): 2 sessions
 Wk -2 (09 Aug-16 Aug): 3 sessions
 Wk -1 (16 Aug-23 Aug): 1 sessions

Time between sessions this week:

Mon 24 Aug 10:40 -> Wed 26 Aug 08:24: 46h

Wed 26 Aug 08:24 -> Fri 28 Aug 11:03: 51h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Mon 24 Aug + Wed 26 Aug (46h apart): overlap = legs, shoulders

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	3	8	AT RISK
Back	8	10	AT RISK
Shoulders	6	8	AT RISK
Traps	0	4	AT RISK
Rear Delts	3	6	AT RISK
Biceps	6	6	OK
Triceps	3	6	AT RISK
Legs	13	10	OK
Core	0	4	AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Triceps, Core

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 7

Weeks since last deload : 7 (deload every 4 weeks)

*** DELOAD THIS WEEK ***

Cut all sets to 2 per exercise. Keep weights the same.

Deload weeks let joints and connective tissue recover.

You will come back stronger after the deload.

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week : W14 (started 2026-05-24; 91 days elapsed = 13 full weeks, now in W14)

Sessions this week: 3 of 6 target

NOTE: No sessions carry a PPL title (Push/Pull/Legs). All three sessions are titled "Full Body A/B/C". Types below are INFERRED from exercises.

The user has not yet transitioned from Full Body to PPL x2 split.

Day	Expected	Detected	Status
* +-----+-----+-----+-----+			
Mon 24 Aug	Push A	Full Body A (INFERRED Push)	INFERRED MATCH -- bench press primary
Tue 25 Aug	Pull A	(no session)	MISSED
Wed 26 Aug	Legs A	Full Body B (INFERRED Push/Mixed)	WRONG -- OHP primary; Legs A expected
Thu 27 Aug	Push B	(no session)	MISSED
Fri 28 Aug	Pull B	Full Body C (INFERRED Pull)	INFERRED MATCH -- row + pulldown primary
Sat 29 Aug	Legs B	(no session logged)	MISSED (today -- no session by 23:30 IST)

Adherence: 33% (2 of 6 scheduled sessions done, 2 of 3 logged match expected PPL day)

NOTE: No session uses proper PPL format. Transition to PPL split has not happened.

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 0 dedicated Legs sessions -- MISSING

(Hip Thrust absent across all 3 sessions this week. APT correction completely skipped.)

Core stabiliser (all sessions): 0 of 3 sessions

(Dead Bug / Bird-Dog absent in every session. T8-T12 kyphosis corrective not performed.)

Rear delt work in Pull sessions: 1 of 1 INFERRED Pull sessions

(Fri 28 Aug: Rear Delt Reverse Fly 3 sets -- but Sets 2 & 3 logged at 0kg. See FLAG.)

Weekly rear delt sets total: 3 (target 8+ per week -- SHORT by 5 sets)

Sessions over 60 min: None

Mon 24 Aug: 28 min | Wed 26 Aug: 57 min | Fri 28 Aug: 8 min

FLAG: Fri 28 Aug logged only 8 min for 11 sets -- likely app did not record session end.

LATERAL RAISE (V-TAPER KPI):

This week : 10kg x 15 reps (Mon 24 Aug) | Prior week (16-22 Aug): no Lateral Raise logged

Last logged prior: 10kg x 14 reps (Mon 10 Aug) | Trend: SAME

(Weight unchanged at 10kg. Reps +1 since 10 Aug. All 3 sets hit 15 reps --> try 11.25kg next session.)

7. KEY INSIGHTS

RECOVERY AT 44:

Two session-pair gaps this week. Mon 24 Aug (10:40) to Wed 26 Aug (08:24) = 46 hours.

Both sessions hit shoulders (lateral raise Mon, OHP Wed) and legs (squat Mon, leg

curl + leg extension Wed). 46h is below the 48h minimum required at 44 for full muscle repair. Training a muscle in this window adds fatigue, not adaptive stimulus, and elevates joint injury risk -- particularly relevant given the pre-existing shoulder imbalance (front-rear delt asymmetry). This pair is the only violation this week.

Wed 26 Aug to Fri 28 Aug = 51h: both sessions hit legs, but 51h clears the 48h floor

* PASS. Every week the Mon-Wed gap is under 48h, one of those sessions is effectively wasted. Fix: shift Wed session to a 58h gap or swap to Mon-afternoon / Wed-evening timing.

PPL ADHERENCE AND PROGRAMME AGE:

This is Week 14 of the PPL x2 programme (started 2026-05-24). Three of six scheduled sessions were completed (50% session rate). More critically: the PPL split has not been adopted at all. All three sessions are Full Body A/B/C -- the same template Ganesh used before the programme. Tuesday and Thursday are consistently skipped (pattern across all four weeks in the 30-day log). Saturday (Legs B) has never been logged in the entire 30-day window. The user is training in a Mon/Wed/Fri Full Body pattern and calling it PPL. At 14 weeks in, the programme structure itself needs to be picked up.

CORRECTIVE COMPLIANCE:

Hip Thrust is mandatory every Legs session for anterior pelvic tilt (APT) correction. It does not appear once in the entire 30-day log. When hip flexors stay chronically shortened and glute max stays weak (APT pattern), heavy barbell squats and Romanian deadlifts transfer load to the lumbar spine at end-range extension. At 44, disc tolerance to this compression pattern declines. Hip Thrust directly recruits glute max at the position APT most needs it (hip extension). Zero Hip Thrust across 14 programme weeks means zero corrective progress on APT. Rear delts this week: 3 sets vs 8-set target (37.5%). At age 44, the anterior deltoid and pec major create a strong internal rotation pull on the humeral head. When the posterior rotator cuff (infraspinatus, teres minor) and rear delts cannot match this pull, the humeral head migrates forward under load. The supraspinatus tendon gets pinched in the subacromial space with every overhead movement -- this is rotator cuff impingement. It develops silently: the imbalance accumulates for months before pain appears. Core stabilisers (Dead Bug, Bird-Dog): 0 of 3 sessions this week; 0 appearances in the full 30-day log. The lower thoracic multifidus and transverse abdominis are the stability layer for T8-T12 during compound lifts. Without this activation, every overhead press and bent-over row is loaded through a thermally compressed spinal segment.

LATERAL RAISE -- V-TAPER KPI:

Lateral raise weight: 10kg as of Mon 24 Aug. Last logged before this week: 10kg on Mon 10 Aug (14 days earlier). Weight has not moved in at least three weeks. All three sets this week hit 15 reps, which triggers the isolation progression rule (+1.25kg), so the evidence says Ganesh can move to 11.25kg -- but the increase has not been made. For Ganesh's specific issue: love handles sit at lat-width level, which collapses the visual shoulder-to-waist ratio. Lat width alone cannot fix the V-taper because the love handles are at the same horizontal level as the lats. Only growing the shoulder

silhouette outward (lateral head of deltoid) shifts that ratio. Lateral raise is the direct stimulus for that. Every week it stays at 10kg, V-taper is flat.

HARD FLAGS:

1. Rear Delt Reverse Fly (Fri 28 Aug): Set 1 = 10kg x 10 reps. Set 2 = 0kg x 10 reps. Set 3 = 0kg x 10 reps. Clearly a data entry error (weight not re-entered between sets). Two of three rear delt sets delivered zero load -- the session's rear delt volume is effectively one working set, not three.
2. Fri 28 Aug session logged as 8 minutes for 11 sets (4 exercises). Physically impossible at any controlled tempo. Session timer was not stopped properly. Actual duration unknown -- cannot assess corrective compliance or recovery pacing for this session.
3. Mon 24 Aug to Wed 26 Aug: 46h gap with shoulders + legs overlap. Below 48h minimum. Named offender: Mon-24 / Wed-26 pair. Risk elevated for shoulder joint impingement (front-rear delt imbalance plus short recovery).
4. Hip Thrust: absent in entire 30-day log (not just this week). APT corrective has been completely unaddressed since programme start.
5. Core stabilisers (Dead Bug / Bird-Dog): absent in entire 30-day log. T8-T12 kyphosis corrective has been completely unaddressed since programme start.
6. Lateral raise stuck at 10kg for 3+ weeks despite hitting 15 reps across all sets. Isolation progression rule allows +1.25kg immediately.

OVERALL VERDICT: HOLDING

Volume is up 171% vs last week and Bench/Row strength moved forward, but the programme structure (PPL x2) has not been adopted in 14 weeks, corrective compliance is 0% across all metrics, and V-taper progress is stalled. Same pattern as weeks prior. Not declining because volume/strength are moving. Not improving because the structural and corrective problems are unchanged.

8. PLAN FOR NEXT WEEK

Programme week: W15 (Week 15 of PPL x2)

Target: 6 sessions. Begin proper PPL split -- Full Body sessions end here.

Deload was flagged for W14 but not observed. W15 is full training; next deload W18.

MONDAY 31 AUG -- Push A (Chest primary + Shoulders + Triceps)

Dead Bug 3 x 10 (mandatory T8-T12 corrective -- do FIRST)
 Bench Press (Barbell) 3 x 8 @ 62.5kg [was 60x8 all sets -- +2.5kg]
 Overhead Press (Barbell) 3 x 8 @ 45kg [was 45x7 -- hold; target 8 reps]
 Lateral Raise (Dumbbell) 3 x 15 @ 11.25kg [was 10x15 all sets -- +1.25kg NOW]
 Triceps Pushdown 3 x 11 @ 28.5kg [was 27.2x11 all sets -- +1.25kg]
 Focus: lateral raise is the V-taper KPI -- do not skip or reduce weight this session.

TUESDAY 01 SEP -- Pull A (Back compound + Biceps)

Dead Bug 3 x 10 (mandatory corrective -- do FIRST)
 Bent Over Row (Barbell) 3 x 8 @ 72.5kg [was 70x8 all sets -- +2.5kg]
 Lat Pulldown (Machine) 3 x 8 @ 66kg [was 66x6 for only 2 sets -- add set, hold]

weight]

- Pull Up (Bodyweight) 3 x 6 @ bodyweight [log as 0kg in Hevy]
- Bicep Curl (Barbell) 3 x 10 @ 21.25kg [was 20x10 -- +1.25kg]
- Rear Delt Reverse Fly (Dumbbell) 3 x 12 @ 10kg [fix 0kg error -- log weight every set]
- Focus: Rear Delt Reverse Fly is mandatory; log the weight correctly for all 3 sets.

WEDNESDAY 02 SEP -- Legs A (Quads + Hamstrings + Glutes)

- Bird-Dog 3 x 10 each side (mandatory corrective -- do FIRST)
- Hip Thrust (Barbell) 3 x 10 @ 60kg [FIRST TIME -- mandatory APT -- DO NOT SKIP]

2 x 10 @ 70kg [back-off sets]
- Seated Leg Curl (Machine) 3 x 9 @ 44.25kg [was 43x9 all sets -- +1.25kg]
- Focus: Hip Thrust is the single most important exercise of this day. If the weight feels easy at 60kg, that is expected -- glute max is undertrained; build the movement.

THURSDAY 03 SEP -- Push B (Shoulders primary + Chest variation + Triceps)

- Dead Bug 3 x 10 (mandatory corrective -- do FIRST)
- Overhead Press (Barbell) 3 x 8 @ 45kg [target 8 clean reps to unlock +2.5kg]

- Triceps Pushdown 3 x 11 @ 28.5kg [same as Mon]
- Focus: OHP must hit 8 reps on all 3 sets to unlock +2.5kg next week.

- Bicep Curl (Barbell) 3 x 10 @ 21.25kg [same as Tue]
- Focus: Rear delt sets this session + Tue session = 6 of 8 weekly target. Do not skip.

SATURDAY 05 SEP -- Legs B (Glutes + Hamstrings + Single-Leg)

- Bird-Dog 3 x 10 each side (mandatory corrective -- do FIRST)
- Hip Thrust (Barbell) 3 x 12 @ 60kg [MANDATORY APT -- second Legs session]
- Leg Press (Machine) 3 x 12 @ 52.5kg [was 50x12 all sets -- +2.5kg]
- Seated Leg Curl (Machine) 3 x 9 @ 44.25kg [same as Wed]
- Bulgarian Split Squat (DB) 3 x 8 @ 10kg DB [first time -- single-leg mandatory for Legs

B]

- Focus: Hip Thrust is mandatory. Bulgarian Split Squat exposes left-right leg imbalance -- note any asymmetry in reps or stability for future tracking.
