4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group	Sets this wk	Target/wk	Gap	Status
Chest	6	12	6	CRITICAL
Back	12	14	2	LOW
Shoulders	3	10	7	CRITICAL
Traps	6	6	0	OK
Rear Delts	0	8	8	CRITICAL
Biceps	3	8	5	CRITICAL
Triceps	3	8	5	CRITICAL
Legs	9	14	5	CRITICAL
Core	9	6	-3	OK
Push sets: 12 Pull sets: 21 Ratio pull:push = 1.75 (OK -- balanced)				
Rear delts: 0 sets this week (need 8+/week)				
SHORT by 8 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.				
Traps : 6 sets this week (need 6+/week)				
OK.				
Enough work this week: Traps, Core				
Short this week : Chest, Back, Shoulders, Rear Delts, Biceps, Triceps, Legs				
Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.				

5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target
Wk -3 (11 May-18 May): 7 sessions
Wk -2 (18 May-25 May): 2 sessions
Wk -1 (25 May-01 Jun): 4 sessions

Time between sessions this week:
Mon 01 Jun 07:08 -> Wed 03 Jun 08:41: 50h
Wed 03 Jun 08:41 -> Fri 05 Jun 08:02: 47h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:
Wed 03 Jun + Fri 05 Jun (47h apart): overlap = back, core, legs, traps

At age 44, muscles need 48-72h to fully repair between sessions.
Training a muscle before it has recovered adds fatigue, not stimulus,

and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day
TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)
Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)
Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle This wk Min Status

Chest 6 8 AT RISK
Back 12 10 OK
Shoulders 3 8 AT RISK
Traps 6 4 OK
Rear Delts 0 6 AT RISK
Biceps 3 6 AT RISK
Triceps 3 6 AT RISK
Legs 9 10 AT RISK
Core 9 4 OK

Muscles at risk of loss this week (below minimum stimulus):
Chest, Shoulders, Rear Delts, Biceps, Triceps, Legs
These are not getting enough signal to hold on to muscle during a deficit.
Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1
Weeks since last deload : 1 (deload every 4 weeks)
Next deload : in 3 week(s), approx 29 Jun 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week : W2 (started 2026-05-24; W1 = 25 May-31 May, W2 = 01 Jun-07 Jun)
Sessions this week: 3 of 6 target

Day | Expected | Detected | Status

-----+-----+-----+-----
Mon 01 Jun | Push A | Full Body (UNTRACKED) | WRONG -- Full Body, not Push A
Wed 03 Jun | Legs A | Full Body (UNTRACKED) | WRONG -- Full Body, not Legs A
Fri 05 Jun | Pull B | Full Body (UNTRACKED) | WRONG -- Full Body, not Pull B
(Tue 02 Jun) | Pull A | -- | SKIPPED
(Thu 04 Jun) | Push B | -- | SKIPPED
(Sat 06 Jun) | Legs B | -- | SKIPPED

Note: No PPL keywords in any title. Exercises span push/pull/legs in every session -- no single type can be inferred. All 3 sessions revert to Full Body format. PPL week 1 (25-31 May) was on programme; W2 abandoned it.
Adherence: 0% (0 of 3 trained sessions matched correct PPL type)

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 0 dedicated Legs sessions -- N/A
 No Legs session scheduled or trained. Zero
 Hip Thrusts logged this week. APT correction

COMPLETELY MISSED.

Core stabiliser (all sessions) : 0 of 3 sessions -- MISSING on all three days
 Mon 01 Jun: no Dead Bug, Bird-Dog, or Plank
 Wed 03 Jun: Hanging Leg Raise only (strength, not T8-T12 kyphosis corrective)
 Fri 05 Jun: no Dead Bug, Bird-Dog, or Plank
 Rear delt work in Pull sessions: 0 of 0 dedicated Pull sessions -- N/A
 No Pull session trained. Zero rear delt sets logged across all sessions this week.
 Sessions over 60 min : ALL 3 sessions exceeded the 60-min cap
 Mon 01 Jun: 70 min (+10 min over)
 Wed 03 Jun: 83 min (+23 min over)
 Fri 05 Jun: 98 min (+38 min over)

LATERAL RAISE (V-TAPER KPI):

This week : 0 sets logged (no Lateral Raise performed)
 Prior week : 10kg x 15 reps (Thu 28 May, Push B)
 Trend : DOWN

7. KEY INSIGHTS

RECOVERY AT 44

This week had three sessions: Mon 01 Jun (07:08), Wed 03 Jun (08:41), Fri 05 Jun (08:02). The Mon-to-Wed gap was 49h 33min -- just clear of the 48h minimum. The Wed-to-Fri gap was 47h 21min -- 39 minutes short. Because every session this week was Full Body, both back and legs were hit across all three workouts. That means the Wed-to-Fri pair is the offender: back (Bent Over Row Wed, Seated Cable Row + RDL Fri) and legs (Leg Press Wed, RDL Fri) were re-loaded at 47h, before tissues had fully repaired. At 44, that window closes more slowly than at 30. The fix is PPL structure -- each muscle group appears only twice across the six days, with 72h of rest built in by design.

PPL ADHERENCE AND PROGRAMME AGE

This is W2 of PPL x2 (programme started 2026-05-24). Adherence this week is 0%: all three sessions were Full Body rather than the scheduled Push A / Legs A / Pull B. The most consistent skip pattern is Tuesday, Thursday, and Saturday -- the same three slots missed every week. W1 (25-31 May) had four PPL sessions logged (Push A, Pull A, Legs A, Push B) at roughly 67% adherence. W2 dropped to zero as the Full Body habit reasserted itself. If this pattern continues, the corrective overload on Legs and the rear-delt accumulation built into PPL never materialises.

CORRECTIVE COMPLIANCE

Hip Thrust hit rate this week: 0%. No dedicated Legs session was trained, so the mandatory APT correction (anterior pelvic tilt) did not happen. Missing Hip Thrust shifts the load balance further toward the hip flexors and lumbar extensors -- two structures already stressed by office sitting. Core stabiliser (Dead Bug or Bird-Dog) was absent from all three sessions this week, down from 4 of 4 sessions in W1. Zero rear delt sets logged (target 8+/week). Front deltoids were trained via OHP and bench; rear delts received nothing. At 44, when the anterior shoulder muscles are significantly stronger than the posterior ones, the rotator cuff is pulled forward in the socket under load -- this is the mechanism that precedes sub-acromial impingement. The fix is non-negotiable: Face Pull or Rear Delt Fly every Pull session, every week.

LATERAL RAISE TREND -- V-TAPER KPI

No Lateral Raises this week. Prior week best was 10kg x 15 reps (Push B, 28 May). Trend: DOWN. This matters specifically for Ganesh because the love handles currently sit at the same horizontal level as the lats, collapsing the waist-to-shoulder visual ratio. Fat loss alone will not fix this -- the shoulder must grow wider. Lateral Raise weight progression is the only direct lever. A week with zero sets means zero stimulus for the medial deltoid, which is already the narrowest link.

HARD FLAGS

1. Bench Press (Barbell), Mon 01 Jun: rep collapse 12->8 within same session. Indicates weight is at or above current work capacity. Drop to 37.5kg next session.
2. Incline Bench Press, Fri 05 Jun: rep collapse 12->8. Drop to 17.5kg.
3. Wed 03 Jun -> Fri 05 Jun: only 47h between sessions (39 min short of 48h minimum). All major muscle groups retrained before recovery.
4. All three sessions ran over 60 min (70, 83, 98 min). The 98-min Friday session is 63% over the 60-min target -- cortisol is elevated for most of the second hour at this training age, blunting anabolic response.
5. Zero rear delt sets for the entire week (8 sets short of target).
6. Zero Lateral Raises (V-taper KPI). Zero Hip Thrusts (APT correction).
7. Zero core stabiliser work (T8-T12 kyphosis correction absent).

OVERALL VERDICT: DECLINING

Volume is DOWN 36% vs W1 (15,079 vs 23,436 kg*reps). Session count DOWN (3 vs 4). PPL adherence DOWN from 67% to 0%. Corrective compliance DOWN across all three markers. Lateral raise DOWN. W2 is worse than W1 on every dimension tracked.
