4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

Chest | 2 | 12 | 10 | CRITICAL

Back | 6 | 14 | 8 | CRITICAL

Shoulders | 6 | 10 | 4 | CRITICAL

Traps | 0 | 6 | 6 | CRITICAL

Rear Delts | 3 | 8 | 5 | CRITICAL

Biceps | 6 | 8 | 2 | LOW

Triceps | 3 | 8 | 5 | CRITICAL

Legs | 13 | 14 | 1 | LOW

Core | 0 | 6 | 6 | CRITICAL

Push sets: 11 | Pull sets: 15 | Ratio pull:push = 1.36 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 0 sets this week (need 6+/week)

SHORT by 6 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target

Wk -3 (16 Aug-23 Aug): 2 sessions

Wk -2 (23 Aug-30 Aug): 3 sessions

Wk -1 (30 Aug-06 Sep): 1 sessions

Time between sessions this week:

Mon 07 Sep 13:26 -> Wed 09 Sep 10:17: 45h

Wed 09 Sep 10:17 -> Fri 11 Sep 09:47: 47h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Mon 07 Sep + Wed 09 Sep (45h apart): overlap = legs, shoulders

Wed 09 Sep + Fri 11 Sep (47h apart): overlap = legs, other

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle This wk Min Status

Chest 2 8 AT RISK

Back 6 10 AT RISK

Shoulders 6 8 AT RISK

Traps 0 4 AT RISK
Rear Delts 3 6 AT RISK
Biceps 6 6 OK
Triceps 3 6 AT RISK
Legs 13 10 OK
Core 0 4 AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Triceps, Core

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 9

Weeks since last deload : 9 (deload every 4 weeks)

*** DELOAD THIS WEEK ***

Cut all sets to 2 per exercise. Keep weights the same.

Deload weeks let joints and connective tissue recover.

You will come back stronger after the deload.

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week: W16 (started 2026-05-24; week of 06 Sep - 12 Sep 2026)

Sessions this week: 3 of 6 target

Day | Expected | Detected | Status

Mon 07 Sep | Push A | FULL BODY MIXED (INFERRED) | OFF-PLAN (bench + squat + pull up combined)

Tue 08 Sep | Pull A | -- | MISSED

Wed 09 Sep | Legs A | FULL BODY MIXED (INFERRED) | OFF-PLAN (no Hip Thrust; OHP + leg curl + triceps)

Thu 10 Sep | Push B | -- | MISSED

Fri 11 Sep | Pull B | Pull+Legs (INFERRED) | PARTIAL (row + rear delt fly present; leg press added; no bicep)

Sat 12 Sep | Legs B | -- | MISSED

Adherence: 0% (0 of 6 sessions matched correct PPL type; 3 sessions missed entirely)

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 3 sessions -- MISSING (not logged in any session this week)

Core stabiliser (all sessions): 0 of 3 sessions (no Dead Bug, Bird-Dog, or Plank logged)

Rear delt work in Pull sessions: 1 of 1 pull-primary session (Fri: Rear Delt Reverse Fly 3 sets; total 3 vs 8+ target)

Sessions over 60 min: Mon 07 Sep (77 min -- 17 min over); Fri 11 Sep (71 min -- 11 min over)

LATERAL RAISE (V-TAPER KPI):

This week: 10kg x 15 reps | Prior week (30 Aug-05 Sep): none logged | Trend: SAME

(Stuck at 10kg x 15r since 24 Aug -- over 2 weeks with zero progress on the V-taper KPI)

7. KEY INSIGHTS

RECOVERY AT 44

Both session pairs this week violated the 48h minimum recovery window.

Mon 07 Sep 13:26 to Wed 09 Sep 10:17 was only 45h -- 3h short --

with legs and shoulders overlapping in both sessions. Wed 09 Sep 10:17

to Fri 11 Sep 09:47 was only 47h -- 1h short -- with legs again in

both. At 44, connective tissue and muscle repair run slower than in

younger trainees. Neither pair cleared the 48h threshold, meaning

Friday's session likely started on under-recovered legs and shoulders.

This directly explains the Bent Over Row regression from 70kg x 8r (28 Aug) to 60kg x 12r (11 Sep): accumulated fatigue, not strength loss. Reschedule to Mon / Thu / Sat or Mon / Wed / Fri with 48h+ gaps minimum.

PPL ADHERENCE AND PROGRAMME AGE

This is W16 of the PPL x2 programme (started 2026-05-24) and adherence is 0% this week. None of the 3 sessions followed a PPL split -- all were titled "Full Body A/B/C" combining muscle groups that PPL keeps separate. Tuesday, Thursday, and Saturday were completely missed, representing a 3-session shortfall against the 6-session target (50% miss rate). The pattern is clear: only Mon/Wed/Fri slots are being filled, and even those are Full Body rather than Push/Pull/Legs. At 16 weeks in, the programme structure has not been adopted. Transition priority: at minimum, label Monday as Push A, Wednesday as Legs A, Friday as Pull B, and guard their exercise selection accordingly.

CORRECTIVE COMPLIANCE

Hip Thrust was absent from all 3 sessions (0% hit rate). This is the mandatory corrective for anterior pelvic tilt, where the pelvis tilts forward, exaggerating the lumbar curve. Without Hip Thrust to activate glutes and strengthen the posterior chain, APT will worsen under barbell squat load. Rear delt work totalled only 3 sets this week against the 8+ target. At 44, if the anterior shoulder muscles (pecs, front delts) stay significantly stronger than the rear delts and rotator cuff external rotators, the humeral head is pulled forward in the socket, narrowing the subacromial space. The result is impingement, then tendinitis, then partial or full rotator cuff tears -- an injury requiring 6-12 months recovery and often surgery. Core stabiliser work (Dead Bug or Bird-Dog) was absent from all 3 sessions (0%), leaving T8-T12 thoracic kyphosis with no corrective stimulus for the week.

LATERAL RAISE TREND

SAME -- the V-taper KPI has not moved. Lateral Raise has been stuck at 10kg x 15r since 24 Aug, now over 2 weeks without progression. Since Ganesh's love handles sit at lat-width level, the silhouette is currently barrel-shaped through the midsection. Wider lateral delts create the optical illusion of a narrower waist even before any fat is lost -- this is the highest-leverage visual fix available. All three sets this week completed 15 reps successfully at 10kg, which meets the isolation progression threshold (+1.25kg). Next session target: 11.25kg x 12r.

HARD FLAGS

- Pull Up: 0kg logged across 3 working sets (Mon 07 Sep). Bodyweight (~87kg) was not captured -- likely a Hevy logging error. Fix: log bodyweight as the bar weight or use the assisted pull-up weight offset.
- Bench Press rep collapse: 60kg x 8r (24 Aug) fell to 60kg x 6r (07 Sep), a 2-rep drop with no weight change. Progression rule: drop 5% to 57kg next working session.
- Bent Over Row regression: peak this cycle was 70kg x 8r (28 Aug); this week: 60kg x 12r. A 10kg weight drop. Rebuild from 60kg with proper 48h recovery between sessions.
- Duration: Mon 07 Sep ran 77 min (17 min over cap); Fri 11 Sep ran

71 min (11 min over). Two of 3 sessions exceeded the 60-min limit.

- Hip Thrust and Dead Bug: both mandatory correctives absent all week.

OVERALL VERDICT: HOLDING

Volume rebounded strongly (13,539 vs 3,220 kg*reps last week, +320%) and session count improved from 1 to 3. These are real improvements. However, PPL adherence is still 0% at W16, corrective compliance is 0% for both Hip Thrust and Dead Bug, two strength benchmarks declined (Bench Press rep collapse, Bent Over Row regression), and both Mon and Fri sessions ran over the 60-min cap. Volume quantity is improving; programme quality and corrective execution remain stuck.
Verdict: HOLDING.

8. PLAN FOR NEXT WEEK

Programme week: W17 of PPL x2 -- *** DELOAD WEEK (overdue since W12) ***

Rule: 2 working sets per exercise, same weights as this week's best.

Every session: Dead Bug 2x10 (mandatory -- T8-T12 kyphosis corrective).

MONDAY 13 Sep -- Push A (Chest primary + Shoulders + Triceps)

Bench Press (Barbell) 2 x 6 @ 60kg

[Rep collapse flagged (was 8r): next normal week drop to 57kg]

Overhead Press (Barbell) 2 x 8 @ 45kg

Lateral Raise (Dumbbell) 2 x 15 @ 10kg [V-taper KPI: log all sets]

[Target: increase to 11.25kg next non-deload week -- all sets hit 15r]

Triceps Pushdown 2 x 11 @ 27.2kg

Dead Bug 2 x 10 -- do not skip

Focus: Establish Push A session structure for the first time this cycle.

Film the bench set -- rep collapse means form check is due.

TUESDAY 14 Sep -- Pull A (Back compound + Biceps)

Bent Over Row (Barbell) 2 x 12 @ 60kg

[Prior peak 70kg x 8r; regression present -- rebuild from 60kg with proper recovery]

Lat Pulldown (Machine) 2 x 6 @ 66kg

Bicep Curl (Barbell) 2 x 10 @ 20kg

Dead Bug 2 x 10 -- do not skip

Focus: Full ROM on the row; deload is a form-reset week, not just a lower-intensity week.

WEDNESDAY 15 Sep -- Legs A (Quads + Hamstrings + Glutes)

Squat (Barbell) 2 x 7 @ 70kg

Hip Thrust (Barbell) 2 x 10 @ 60kg -- MANDATORY (APT correction)

[No recent log; 60kg is conservative -- adjust on feel, prioritise glute activation]

Leg Extension (Machine) 2 x 10 @ 77kg

Seated Leg Curl (Machine) 2 x 9 @ 43kg

Dead Bug 2 x 10 -- do not skip

Focus: Hip Thrust goes immediately after the squat. If time runs short, cut sets elsewhere -- Hip Thrust is non-negotiable for APT.

THURSDAY 16 Sep -- Push B (Shoulders primary + Chest variation + Triceps)

Overhead Press (Barbell) 2 x 8 @ 45kg

Lateral Raise (Dumbbell) 2 x 15 @ 10kg [V-taper KPI]

Bench Press (Barbell) 2 x 6 @ 60kg [chest variation on Push B]

Triceps Pushdown 2 x 11 @ 27.2kg

Dead Bug 2 x 10 -- do not skip

Focus: Shoulders lead on Push B -- OHP opens the session. Keep under 60 min; strip extended warm-up, go straight to working sets.

FRIDAY 17 Sep -- Pull B (Back + Rear Delts + Biceps)

Bent Over Row (Barbell) 2 x 12 @ 60kg

Rear Delt Reverse Fly (DB) 2 x 12 @ 10kg -- MANDATORY (rotator cuff)

Lat Pulldown (Machine) 2 x 6 @ 66kg

Bicep Curl (Barbell) 2 x 10 @ 20kg

Dead Bug 2 x 10 -- do not skip

Focus: Rear Delt Fly is mandatory. At 44, this exercise is the primary defence against rotator cuff impingement. If time is tight, cut a

Lat Pulldown set, not the Rear Delt Fly.

SATURDAY 18 Sep -- Legs B (Glutes + Hamstrings + Single-Leg + Hip Thrust)

Hip Thrust (Barbell) 2 x 10 @ 60kg -- MANDATORY (APT correction)

Leg Press (Machine) 2 x 12 @ 60kg

Seated Leg Curl (Machine) 2 x 9 @ 43kg

Romanian Deadlift (Barbell) 2 x 10 @ 50kg [no recent log; conservative]

Dead Bug 2 x 10 -- do not skip

Focus: Two Hip Thrust sessions this week (Wed + Sat) begins addressing APT. Feel for glute activation; if lower back takes over, drop 10% and reset.
