

This Week's Training Summary

08 Sep – 14 Sep 2026 · Generated 15 Sep 2026

Week 17 of PPL x2 · **DELOAD** due next week (W18)

HOW THIS WEEK WENT

- 

2 of 6 sessions completed — fourth consecutive week stuck at 2/6. ✗ CRITICAL
Monday, Tuesday, Thursday, and Saturday missed again. This is Week 17 and a full PPL week has never been logged.
- 

Volume UP 75% week-on-week — 10,669 vs 6,090 kg·reps. Best lift: ✓ OK
Leg Extension 77kg x 10 reps (e1RM 102.7kg), up 2.6kg. Overhead Press hit 45kg x 8 for all 3 sets, on track for 47.5kg next load week.
- 

Lateral Raise (V-taper KPI): 0 sets this week, down from 10kg x 15 reps the week before — trend: **DOWN**. Love handles sit at lat-width level; lateral delt width is the only way to restore the V-taper. Both Push sessions (Monday, Thursday) were skipped, so shoulder-width work got zero stimulus. ✗ CRITICAL
- 

Zero Hip Thrust (APT uncorrected, 4+ weeks running) · Zero core stabiliser sets (T8–T12 kyphosis unaddressed) · Only 3 rear-delt sets vs 8 target · Friday session ran 71 min (11 min over limit). Corrective compliance score: 0/4. ✗ CRITICAL
- 

Wed 09 Sep + Fri 11 Sep: leg muscles trained only 47h apart — 1 hour under the 48h minimum at 44. A 9 AM Friday start after Wednesday is the culprit; shift Friday to 6 PM IST. ⚠ LOW

DO THIS NEXT WEEK (W18 — DELOAD)

- 1 Complete all 6 PPL sessions Mon–Sat at deload intensity (2 sets per exercise, same weights).** Monday Push A and Thursday Push B are the critical misses — start Monday at 6 PM, set a calendar block for all six days now. W18 is the first step to breaking the 4-week 2/6 pattern.
- 2 Hip Thrust at 40kg x 10 reps in BOTH Legs sessions — Wednesday Legs A and Saturday Legs B — as the very first exercise.** APT has been uncorrected for 4+ weeks; tight hip flexors are loading your lumbar spine on every squat and press. Do it first, before fatigue, every Legs day.
- 3 Lateral Raise 10kg x 15 in both Push sessions — Monday Push A and Thursday Push B.** V-taper KPI went from 10kg x 15 last week to 0 sets this week (trend: DOWN). Love handles at lat-width mean the shoulder silhouette

must widen; this only happens if lateral raises happen consistently. Non-negotiable in every Push session.

- 4 **Dead Bug or Bird-Dog 3 x 10 at the end of EVERY session, all six days.** T8–T12 kyphosis corrective has been absent 4+ weeks. This takes 4 minutes — add it as the cool-down, no exceptions. Kyphosis does not self-correct.

W18 DELOAD INFO

Deload: **needed this week** — 10 weeks without a deload (due every 4). | Next deload: W22, ~12 Oct 2026 | Timing: 6–9 PM IST | Nutrition: 2,367 kcal · 174g protein minimum

Hevy Agent · Claude AI · [gannyprodigy/hevy_log](#)
