4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----				
Chest		10		12 2 LOW
Back		12		14 2 LOW
Shoulders		9		10 1 LOW
Traps		11		6 -5 OK
Rear Delts		8		8 0 OK
Biceps		6		8 2 LOW
Triceps		6		8 2 LOW
Legs		21		14 -7 OK
Core		6		6 0 OK

Push sets: 25 | Pull sets: 37 | Ratio pull:push = 1.48 (OK -- balanced)

Rear delts: 8 sets this week (need 8+/week)

OK -- shoulder balance maintained.

Traps : 11 sets this week (need 6+/week)

OK.

Enough work this week: Traps, Rear Delts, Legs, Core

Short this week : Chest, Back, Shoulders, Biceps, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (03 Apr-10 Apr): 0 sessions

Wk -2 (10 Apr-17 Apr): 5 sessions

Wk -1 (17 Apr-24 Apr): 5 sessions

Time between sessions this week:

Fri 24 Apr 08:28 -> Sat 25 Apr 08:03: 24h [FLAG: only 24h rest, same muscles: back]

Sat 25 Apr 08:03 -> Mon 27 Apr 08:31: 48h

Mon 27 Apr 08:31 -> Tue 28 Apr 08:18: 24h

Tue 28 Apr 08:18 -> Wed 29 Apr 08:32: 24h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Fri 24 Apr + Sat 25 Apr (24h apart): overlap = back

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	10	8	OK
Back	12	10	OK
Shoulders	9	8	OK
Traps	11	4	OK

Rear Delts	8	6	OK
Biceps	6	6	OK
Triceps	6	6	OK
Legs	21	10	OK
Core	6	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 22 May 2026

7. KEY INSIGHTS

RECOVERY AT 44

At 44, muscle protein synthesis takes 48-72h to complete -- shorter windows don't allow full repair, meaning the next session adds fatigue on top of damage rather than building new tissue. This week the data shows one clear breach: Friday 24 Apr (Upper Body) was followed by Saturday 25 Apr (Lower Body) just 24h later, and both sessions hit back -- Shrugs and Trap-bar Deadlift on Saturday overlapped with the upper body load on Friday. The three remaining gaps (Mon->Tue, Tue->Wed) were also only 24h, acceptable for different muscle groups but tight for a 44-year-old. One rest day between any sessions sharing a muscle group is the minimum; two is better.

REAR DELT AND TRAP BALANCE

When the front-of-shoulder muscles (chest press e1RM 82kg, seated shoulder press e1RM 102.5kg) are far stronger than the rear deltoids (rear delt fly e1RM 56kg, face pull e1RM 36.3kg), the humeral head is pulled forward in the socket. Over time this compresses the rotator cuff tendons, causing impingement and increasing shoulder injury risk -- particularly on pressing movements. This week rear delts hit exactly 8 sets, which meets the minimum target, but the strength gap is real. Consistent rear-delt and face-pull work is the primary structural protection for Ganesh's shoulders.

RED FLAGS THIS WEEK

1. Pull Up logged at 0 kg in all three sessions (Mon 27 Apr). Bodyweight exercises should be logged with the user's actual bodyweight (~79 kg) so e1RM and volume track correctly. Check the Hevy exercise setting for Pull Up and confirm bodyweight is registered.
2. Triceps Pushdown weight drop: 50 kg on Fri 24 Apr -> 24.9 kg on Tue 28 Apr. This is almost certainly a units error (24.9 kg ? 55 lb) or a different cable stack was used and logged in lbs. The real working weight remains 50 kg -- verify the cable machine setting before next session.
3. Back-to-back 24h sessions (Fri 24 + Sat 25) with overlapping back and

trap load. Not catastrophic for one week, but repeated weekly it will blunt gains and raise injury risk.

OVERALL TREND

Positive and accelerating. Volume increased 9% week-on-week (39,584 vs 36,234 kg*reps) and the majority of compound lifts show upward e1RM movement. The 0-session week three weeks ago was an outlier; since returning Ganesh has hit 5 sessions in each of the two completed training weeks. Chest and biceps remain the weakest muscle groups by sets, and closing that gap should be the focus for the next two weeks before the scheduled deload.
