4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group	Sets this wk	Target/wk	Gap	Status
* +-----+-----+-----+-----				
Chest	11	12	1	LOW
Back	12	14	2	LOW
Shoulders	9	10	1	LOW
Traps	11	6	-5	OK
Rear Delts	8	8	0	OK
Biceps	6	8	2	LOW
Triceps	6	8	2	LOW
Legs	21	14	-7	OK

Core | 6 | 6 | 0 | OK

Push sets: 26 | Pull sets: 37 | Ratio pull:push = 1.42 (OK -- balanced)

Rear delts: 8 sets this week (need 8+/week)

OK -- shoulder balance maintained.

Traps : 11 sets this week (need 6+/week)

OK.

Enough work this week: Traps, Rear Delts, Legs, Core

Short this week : Chest, Back, Shoulders, Biceps, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 5 of 5 target

Wk -3 (06 Apr-13 Apr): 2 sessions

Wk -2 (13 Apr-20 Apr): 5 sessions

Wk -1 (20 Apr-27 Apr): 5 sessions

Time between sessions this week:

Mon 27 Apr 08:31 -> Tue 28 Apr 08:18: 24h

Tue 28 Apr 08:18 -> Wed 29 Apr 08:32: 24h

Wed 29 Apr 08:32 -> Fri 01 May 08:20: 48h

Fri 01 May 08:20 -> Sat 02 May 08:25: 24h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Fri 01 May + Sat 02 May (24h apart): overlap = back

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	11	8	OK
Back	12	10	OK

Shoulders	9	8	OK
Traps	11	4	OK
Rear Delts	8	6	OK
Biceps	6	6	OK
Triceps	6	6	OK
Legs	21	10	OK
Core	6	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 25 May 2026

7. KEY INSIGHTS

RECOVERY AT 44

Muscles need 48-72h to repair fully, and older lifters accumulate systemic fatigue faster with less buffer than younger athletes. This week had three consecutive sessions (Mon->Tue->Wed) with only 24h gaps, plus a Fri->Sat pair also 24h apart. The Mon-Tue-Wed run is the main concern: even though Push and Pull target different prime movers, the stabilisers -- shoulders, spine, core -- are loaded across all three days without recovery. Moving either the Tuesday or Thursday session (or replacing Mon-Tue with Mon-Wed) would create the 48h windows the body needs at this age.

REAR DELTS, TRAPS, AND SHOULDER HEALTH

When push muscles (front delts, chest) are significantly stronger or more trained than the rear of the shoulder, the shoulder blade tilts forward and the rotator cuff impinges under load -- the most common cause of chronic gym shoulder pain. This week: rear delts hit exactly 8 sets (target 8) and traps reached 11 sets (target 6). The push:pull ratio is 1.42, which is in the healthy range. Shoulder health picture is currently solid. The only task is maintaining rear delt work at 8+ sets every week even when sessions are short -- these are the sets that protect the joint, not build the mirror muscle.

RED FLAGS FROM THIS WEEK

1. Deadlift weight jump (80kg->90kg in one session): The e1RM improved to 114kg which is positive, but a 10kg single-session jump on a compound loaded via the spine carries higher injury risk. Standard safe progression is 2.5kg per session. Rep count dropped from 12 to 8 as a direct result. Hold at 90kg next week and build reps before adding weight.
2. Pull-up logged at 0kg: The app has no bodyweight attached to pull-up sets, so the e1RM reads 0kg and trend tracking is broken. Log bodyweight (79kg) as the set weight in Hevy or enter it in the exercise notes so the AI can

track relative strength progress.

3. Triceps Pushdown -35.1kg e1RM is a false flag: Cult sessions use a cable machine (~25kg) and Drona sessions use a plate-loaded machine (~55kg). The system is comparing across incompatible equipment. No actual strength drop occurred. Consider naming them separately in Hevy (e.g. "Triceps Pushdown [Cable]" vs "Triceps Pushdown [Machine]").

OVERALL TREND

Strongly positive. Weekly volume rose 8% to 41,924 kg*reps (vs 38,997 the prior week). The 4-week progression reads 12,928 -> 34,686 -> 38,997 -> 41,924 -- consistent upward curve with no regression. The biggest single strength jump this week was the trap bar deadlift: e1RM up to 114.0kg from 106.7kg. All muscle groups cleared the minimum effective volume threshold for muscle retention on a calorie deficit. Direction is right.

8. PLAN FOR NEXT WEEK

SESSION 1 -- Monday 04 May: Pull (Cult)

Bent Over Row (Barbell) 3 x 10 x 60kg

(hold -- hit 3x10 cleanly; step to 62.5kg when all sets feel controlled)

Pull Up (Bodyweight) 3 x 6 x BW

(log 79kg as set weight in Hevy so e1RM tracks; target 3x8 before adding belt)

Shrug (Smith Machine) 4 x 10 x 72.5kg (up from 70kg; 1.25kg/side plates)

Face Pull 4 x 18 x 22.7kg (hold weight; focus on slow eccentric)

Hammer Curl (Dumbbell) 3 x 8 x 13kg (up from 12kg)

SESSION 2 -- Tuesday 05 May: Push (Cult)

Incline Bench Press (DB) 4 x 13 x 20kg
