4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----				
Chest	5	12	7	CRITICAL
Back	16	14	-2	OK
Shoulders	7	10	3	LOW
Traps	6	6	0	OK
Rear Delts	6	8	2	LOW
Biceps	8	8	0	OK
Triceps	3	8	5	CRITICAL
Legs	12	14	2	LOW
Core	12	6	-6	OK

Push sets: 15 | Pull sets: 36 | Ratio pull:push = 2.40 (OK -- balanced)

Rear delts: 6 sets this week (need 8+/week)

SHORT by 2 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 6 sets this week (need 6+/week)
OK.

Enough work this week: Back, Traps, Biceps, Core

Short this week : Chest, Shoulders, Rear Delts, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 4 of 5 target

Wk -3 (05 May-12 May): 6 sessions

Wk -2 (12 May-19 May): 6 sessions

Wk -1 (19 May-26 May): 2 sessions

Time between sessions this week:

Tue 26 May 10:14 -> Wed 27 May 08:37: 22h [FLAG: only 22h rest, same muscles: back, biceps, other, traps]

Wed 27 May 08:37 -> Thu 28 May 07:55: 23h [FLAG: only 23h rest, same muscles: back, core, other]

Thu 28 May 07:55 -> Mon 01 Jun 07:08: 95h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Tue 26 May + Wed 27 May (22h apart): overlap = back, biceps, other, traps

Wed 27 May + Thu 28 May (23h apart): overlap = back, core, other

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	5	8	AT RISK
Back	16	10	OK
Shoulders	7	8	AT RISK
Traps	6	4	OK
Rear Delts	6	6	OK
Biceps	8	6	OK
Triceps	3	6	AT RISK
Legs	12	10	OK
Core	12	4	OK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Shoulders, Triceps

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 23 Jun 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week : W1 (started 2026-05-24; W1 = Mon 25 May -- Sun 31 May)

Sessions W1 : 4 of 6 target | W2 opener (Mon 01 Jun): 1 off-plan session

Day	Expected	Detected	Status
* +-----+-----+-----+			
Mon 25 May	Push A	Push A	OK (title match)
Tue 26 May	Pull A	Pull A	OK (title match)
Wed 27 May	Legs A	Legs A	OK (title match)
Thu 28 May	Push B	Push B	OK (title match)
Fri 29 May	Pull B	(no session)	MISSED
Sat 30 May	Legs B	(no session)	MISSED
Sun 31 May	REST	--	OK
Mon 01 Jun	Push A	Full Body 1	UNTRACKED (no PPL type detected)

Adherence: 67% (4 of 6 target sessions completed on correct day)

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 1 legs sessions -- MISSING on 27 May

(Legs A contained Glute Bridge only; Hip Thrust (Machine) is the mandatory APT corrective and is NOT interchangeable with Glute Bridge)

Core stabiliser (all sessions): 4 of 5 sessions

(Bird Dog present Mon 25, Tue 26, Wed 27, Thu 28; ABSENT Mon 01 Jun Full Body)

Rear delt work in Pull sessions: 1 of 1 pull sessions

(Face Pull 3x15 @ 24.9kg in Pull A on 26 May -- OK)

Sessions over 60 min: ALL 5 sessions exceeded the 60-min target

Mon 25 May : 84 min | Tue 26 May : 118 min | Wed 27 May : 122 min

Thu 28 May : 103 min | Mon 01 Jun : 70 min

LATERAL RAISE (V-TAPER KPI):

This week : 10kg x 15 reps (Thu 28 May, Push B)

Prior week : no data in 18-24 May window (last logged: 12.5kg x 13, 16 May)

Trend : DOWN (10kg vs 12.5kg; e1RM dropped from 17.9kg to 15.0kg, -16%)

7. KEY INSIGHTS

RECOVERY AT 44

Two session pairs this week breached the 48-hour minimum recovery window.

Tue 26 May (Pull A, 10:14) to Wed 27 May (Legs A, 08:37) = only 22 hours --

back, traps, and core were still under fatigue when the Legs session began the following morning. Wed 27 May (Legs A, 08:37) to Thu 28 May (Push B, 07:55) = only 23 hours, with back and core overlap again. Both pairs fall 25+ hours short of the 48-hour minimum. At 44, muscle protein synthesis after a compound session requires 48-72h; training before the repair window closes adds cumulative fatigue rather than adaptation and raises injury risk. The only compliant pair was Thu 28 May to Mon 01 Jun (95 hours). The three-consecutive-day cluster (Tue/Wed/Thu) is the specific offender: insert at least one full rest day between high-overlap sessions.

PPL ADHERENCE -- WEEK 1 OF THE PROGRAMME

This is Week 1 of the PPL x2 programme (started 24 May 2026). Adherence is 67%: 4 of 6 target sessions completed. Monday Push A through Thursday Push B were executed correctly and in sequence -- a solid opening run. Friday Pull B and Saturday Legs B were both skipped entirely. The pattern is notable: the back half of the week drops off. If this recurs in W2, rear delts and Legs B (glutes, hamstrings, rack pull) will chronically fall short of weekly volume targets. Monday 01 Jun used a Full Body template instead of PPL Push A, signalling a break in programme continuity at the W1/W2 boundary.

CORRECTIVE COMPLIANCE

Hip Thrust was absent from the only Legs session this week (Legs A, 27 May). A Glute Bridge was performed in its place, but the floor-based bridge does not replicate the horizontal force vector of the Hip Thrust machine, which is what specifically targets the posterior chain in the position needed to reset anterior pelvic tilt. At 44, uncorrected APT concentrates lumbar spinal load on the erector spinae and increases disc compression risk during any heavy hinge or squat. It must appear in every Legs session without exception. Core stabiliser (Bird Dog / Dead Bug) was present in 4 of 5 sessions -- strong, but the Mon 01 Jun Full Body session had zero corrective work. Rear delt sets for the week total 6 against an 8-set weekly target, and Pull B (the second rear delt session) was missed entirely. If front deltoid and pectoral strength continues to outpace rear delt strength, the humeral head migrates anteriorly in the glenoid socket; at 44, this is the primary precursor to subacromial impingement syndrome, which typically emerges without warning during overhead pressing.

LATERAL RAISE -- V-TAPER KPI

The lateral raise e1RM fell 16% this week: 10kg x 15 reps (e1RM 15.0kg) versus the last logged data point of 12.5kg x 13 reps (e1RM 17.9kg, 16 May). Weight dropped by 2.5kg, reps increased by 2 -- a typical sign of a conservative reset under a new programme structure, but the net effect is a loss of estimated strength. For Ganesh, the V-taper deficit is specific: love handles sit at the same horizontal level as the lats, collapsing the

shoulder-to-waist visual ratio. Lateral delt width and mass are the only levers available to reclaim that ratio on the upper body; they improve only when lateral raise weight is trending upward. The weight must climb each week from this reset baseline of 10kg.

HARD FLAGS

1. Rep collapse: Bench Press (Mon 01 Jun) dropped from 12 reps (sets 1-2) to 8 reps (set 3) -- a 33% fall on the final set. Hold at 40kg for next Push A until all 3 working sets complete target reps before progressing.
2. All 5 sessions exceeded 60 min (84 / 118 / 122 / 103 / 70 min). The 60-min cap covers warm-up, main work, and cool-down combined. Legs A (122 min) and Pull A (118 min) nearly double the target. Prolonged sessions elevate cortisol and compete directly with recovery, particularly at 44.
3. Hip Thrust missing from Legs A (27 May) -- mandatory APT corrective omitted.
4. Lateral Raise weight regression: 12.5kg to 10kg (-20% load reduction).
5. Rack Pull weight drop within a single session: 70kg (set 1) fell to 50kg (sets 2 and 3) -- a 28% intra-session drop. Establish all 3 sets at a consistent weight before progressing.
6. Overhead Triceps Extension (Cable) on 28 May logged 111 reps for set 1 (data entry error; actual was 11). Fix the Heavy entry and use 24kg x 11 as the progression baseline.

OVERALL VERDICT: IMPROVING

Volume rebounded strongly from the prior week (22,299 vs 5,689 kg*reps, +292%). The PPL structure was correctly identified and executed for the first four sessions, with title-matched workouts, a strong Deadlift season-best (95kg x 8, e1RM 120.3kg), and core stabiliser present in 4 of 5 sessions. The foundation is in place. The immediate corrections needed: Hip Thrust in every Legs session, session durations under 60 min, Friday and Saturday sessions not to be skipped, and Lateral Raise weight progressing upward from the 10kg reset.

8. PLAN FOR NEXT WEEK

Programme week: W2 (Week 2 of PPL x2 -- Mon 02 Jun to Sat 07 Jun 2026)
 Target: 6 sessions Mon-Sat. REST Sunday 08 Jun.
 Progression rule: compound +2.5kg / isolation +1.25kg if all sets hit target reps.
 Drop 5% if rep collapse flagged. Conservative start for first-time PPL sessions.

MONDAY 02 JUN -- Push A (Chest primary + Shoulders + Triceps)

Bench Press (Barbell) 4 sets x 8 reps @ 42.5kg
 [+2.5kg: all 4 sets hit 8 reps on 25 May. If set 3 or 4 collapses, hold at 42.5kg next session rather than progressing again.]

Incline Bench Press (Dumbbell) 3 sets x 12 reps @ 21.25kg
 [+1.25kg from 20kg: all 3 sets hit 12 reps on 25 May.]

Chest Fly (Machine) 3 sets x 12 reps @ 46.25kg

[+1.25kg from 45kg: all 3 sets hit 12 reps on 25 May.]

Face Pull 3 sets x 12 reps @ 26.1kg

[+1.25kg from 24.9kg: rear delt balance in Push sessions.]

Triceps Rope Pushdown 3 sets x 9 reps @ 24kg

[+1.25kg from 22.7kg: all 3 sets hit 9 reps on 25 May.]

Lateral Raise (Dumbbell) 3 sets x 12 reps @ 11.25kg [V-TAPER KPI]

[+1.25kg from 10kg: all 3 sets hit 12 reps on 25 May. This KPI must move up every week -- do not drop back to 10kg.]

Dead Bug 3 sets x 16 reps -- DO NOT SKIP

[Mandatory T8-T12 kyphosis corrective. Was absent Mon 01 Jun.]

KEY FOCUS: Cap at 60 min. Set a timer. Trim warm-up to 5 min max.

TUESDAY 03 JUN -- Pull A (Back compound + Biceps)

Pull Up (Weighted) 4 sets x 8 reps @ BW (0kg)

[All 4 sets hit 8 reps on 26 May. If all 4x8 clean today, add 2.5kg clip next Pull A session.]

Dumbbell Row 3 sets x 12 reps @ 21.25kg

[+1.25kg from 20kg: all 3 sets hit 12 reps on 26 May.]

Shrug (Smith Machine) 3 sets x 12 reps @ 71.25kg

[+1.25kg from 70kg: all 3 sets hit 12 reps on 26 May.]

Chest Supported Y Raise 3 sets x 12 reps @ 6.25kg

[+1.25kg from 5kg: all 3 sets hit 12 reps on 26 May.]

Rack Pull 3 sets x 5 reps @ 70kg

[Keep all 3 sets at 70kg. On 26 May set 2 and 3 dropped to 50kg -- do not reduce mid-session. Better to do 2 sets at 70kg than 1 at 70kg and 2 at 50kg.]

Seated Incline Curl 3 sets x 10 reps @ 7.5kg

[Add the 3rd set missing on 26 May. Hold weight until 3x10 is solid.]

Bird Dog 3 sets x 16 reps -- DO NOT SKIP

KEY FOCUS: Session ran 118 min on 26 May. Remove dead hang sets and excess stretching blocks from the middle of the workout.

Start the timer at first main set, finish within 55 min of work.

WEDNESDAY 04 JUN -- Legs A (Quads, Hamstrings, Glutes)

Hip Thrust (Machine) 3 sets x 12 reps @ 20kg -- MANDATORY APT

[MISSED on 27 May. This MUST be the first main exercise in every Legs session. Glute Bridge is not a substitute. Re-establishing at last successful weight (20kg x 13 reps, Session 9, 13 May).]

Deadlift (Trap bar) 3 sets x 8 reps @ 95kg

[On 27 May only 2 sets reached 95kg (set 1 was 90kg). Achieve full 3 sets at 95kg before progressing to 97.5kg.]

Leg Press (Machine) 3 sets x 12 reps @ 72.5kg

Dead Bug 3 sets x 16 reps -- DO NOT SKIP

KEY FOCUS: Session ran 122 min on 27 May -- nearly double the cap.

Remove all mobility stretching from the middle of working sets.

Keep the warm-up circuit (Superman, Bird Dog, Clamshell) to 8 min total, then move directly to Hip Thrust.

THURSDAY 05 JUN -- Push B (Shoulders primary + Chest variation + Triceps)

Seated Overhead Press (Dumbbell) 4 sets x 10 reps @ 18.75kg

[+1.25kg from 17.5kg: all 4 sets hit 10 reps on 28 May.]

Lateral Raise (Dumbbell) 3 sets x 15 reps @ 11.25kg [V-TAPER KPI]

[+1.25kg from 10kg: all 3 sets hit 15 reps on 28 May. Log the exact weight in Hevy -- do not estimate.]

Upright Row (Cable) 3 sets x 10 reps @ 19.35kg
