4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		0		12		12		CRITICAL
Back		7		14		7		CRITICAL
Shoulders		1		10		9		CRITICAL
Traps		3		6		3		LOW
Rear Delts		3		8		5		CRITICAL
Biceps		3		8		5		CRITICAL
Triceps		0		8		8		CRITICAL
Legs		0		14		14		CRITICAL
Core		6		6		0		OK

Push sets: 1 | Pull sets: 16 | Ratio pull:push = 16.00 (OK -- balanced)

Rear delts: 3 sets this week (need 8+/week)

SHORT by 5 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much

stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 3 sets this week (need 6+/week)

SHORT by 3 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Enough work this week: Core

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 2 of 5 target

Wk -3 (26 Apr-03 May): 7 sessions

Wk -2 (03 May-10 May): 5 sessions

Wk -1 (10 May-17 May): 6 sessions

Time between sessions this week:

Mon 18 May 08:28 -> Tue 19 May 08:43: 24h

No sessions after midnight IST this week. Good.

No back-to-back same-muscle sessions this week. Good.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	0	8	AT RISK
Back	7	10	AT RISK
Shoulders	1	8	AT RISK
Traps	3	4	AT RISK
Rear Delts	3	6	AT RISK
Biceps	3	6	AT RISK
Triceps	0	6	AT RISK
Legs	0	10	AT RISK
Core	6	4	OK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 14 Jun 2026

7. KEY INSIGHTS

RECOVERY AT 44

At 44, muscle protein synthesis takes longer to peak and return to baseline -- the science says 48-72h between sessions hitting the same muscle group is the target. This week's two sessions were Pull on Mon 18 May and Push on Tue 19 May -- different muscle groups, so the 24h gap was fine in isolation. The real recovery problem was not overlap but simply the low session count: only 2 of 5 planned workouts hit, meaning most muscles got zero stimulus this week and are now sitting in a 5-day rest window heading into Sunday.

REAR DELT AND TRAP GAP

When the front-of-shoulder muscles (chest, anterior deltoid) are trained much more than the rear delts, the shoulder joint gets pulled forward at rest -- a posture called anterior shoulder tilt. Over time this compresses the rotator cuff tendons and raises impingement and tear risk, especially on pressing movements. This week: 3 rear delt sets vs the 8/week target, and 3 trap sets vs the 6/week target. Rear delts stabilise the shoulder blade; traps hold the neck and upper back upright. Both being critically short while Push volume is already low is a double warning -- the imbalance is not worsening fast this week only because push volume also crashed.

RED FLAGS THIS WEEK

1. Pull Up -- 0kg logged across 4 sets (Monday session). Heavy records bodyweight-only lifts as 0kg. This is technically not a data error, but it inflates set count without contributing to volume and can make the pull session look stronger than it is. Confirm entry is intentional; if bands are used, log the band assistance as a negative load (or use a separate note).
2. Session 20 (Tuesday Push) -- only 1 set logged (Shoulder Press 20kg x 10r) in a 78-minute workout. A 78-minute session producing 200 kg*reps is almost certainly a data entry dropout: the rest of the workout was not saved or was logged in a separate session that did not sync. This needs to be checked in the Heavy app.
3. Volume crash -- 8,025 kg*reps this week vs 50,673 last week (84% drop) and vs a 3-week average of 51,155. This is the largest

single-week drop in the 30-day log, and most of it is attributable to the missing data in Session 20 rather than genuine reduced load.

TREND VS PREVIOUS REPORT

This is the first report generated under this format, so no prior report exists for direct comparison. Across the 30-day log, weeks * 3 through -1 averaged 6 sessions and 51,155 kg*reps per week -- this week's 2 sessions and 8,025 kg*reps is a sharp negative outlier. The 30-day strength trajectory is positive (Trap bar deadlift up from 106.7 to 123.5kg e1RM; Cable Row up from 93.3 to 102.7kg; Chest Press up from 70 to 84kg e1RM) but this week's session data is almost certainly incomplete and should be treated as a data gap rather than a true drop in fitness.

8. PLAN FOR NEXT WEEK (26 May - 1 Jun 2026)

TARGET: 5 sessions. Fix Tuesday data gap. Prioritise rear delts.
