4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest | 11 | 12 | 1 | LOW

Back | 16 | 14 | -2 | OK

Shoulders | 13 | 10 | -3 | OK

Traps | 13 | 6 | -7 | OK

Rear Delts | 7 | 8 | 1 | LOW

Biceps | 9 | 8 | -1 | OK

Triceps | 6 | 8 | 2 | LOW

Legs | 27 | 14 | -13 | OK

Core | 12 | 6 | -6 | OK

Push sets: 30 | Pull sets: 45 | Ratio pull:push = 1.50 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 13 sets this week (need 6+/week)

OK.

Enough work this week: Back, Shoulders, Traps, Biceps, Legs, Core

Short this week : Chest, Rear Delts, Triceps

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 6 of 5 target

Wk -3 (22 Apr-29 Apr): 7 sessions

Wk -2 (29 Apr-06 May): 5 sessions

Wk -1 (06 May-13 May): 5 sessions

Time between sessions this week:

Wed 13 May 08:17 -> Thu 14 May 08:13: 24h [FLAG: only 24h rest, same muscles: back]

Thu 14 May 08:13 -> Fri 15 May 08:52: 25h

Fri 15 May 08:52 -> Sat 16 May 10:11: 25h

Sat 16 May 10:11 -> Mon 18 May 08:28: 46h

Mon 18 May 08:28 -> Tue 19 May 08:43: 24h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Wed 13 May + Thu 14 May (24h apart): overlap = back

Thu 14 May + Fri 15 May (25h apart): overlap = back, biceps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	11	8	OK
Back	16	10	OK
Shoulders	13	8	OK
Traps	13	4	OK
Rear Delts	7	6	OK
Biceps	9	6	OK
Triceps	6	6	OK
Legs	27	10	OK
Core	12	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 10 Jun 2026

7. KEY INSIGHTS

Recovery at 44: Muscle protein synthesis peaks within 24 hours of a session, but the full repair cycle--especially for compound lifts--takes 48-72 hours. This week logged three consecutive training days: Wednesday Legs, Thursday Upper Body, and Friday Lower Body, each separated by only 24-25 hours. Both the Thursday Upper Body (Lat Pulldown) and Wednesday Legs (Romanian Deadlift) session loaded the back, so the same musculature was called to work again before the prior session had cleared. Running stimulus ahead of recovery converts productive training into cumulative fatigue and elevates injury risk--especially in the lower back and shoulder girdle. The abbreviated Monday session (42 min) almost certainly reflects that accumulated fatigue. Rearranging Thursday to Friday and Friday to Saturday restores the 48h buffer without losing a session.

Rear delts and trap gap: Shoulder joint stability depends on a balanced ratio between the front deltoid/pec group and the rear deltoid/external rotator group. This week the front-shoulder pressing e1RM sits around 106kg (Seated Shoulder Press Machine) while the rear delt indicator (Rear Delt Reverse Fly) tops out at 68kg--a 56% gap. When anterior muscles are substantially stronger, the humeral head migrates forward in the socket, and over time this leads to rotator cuff impingement and labral wear. At 7 rear delt sets against an 8-set target the weekly gap is only 1 set, but the structural imbalance warrants consistent rear delt priority in every session--Face Pulls and Reverse Flys should never be dropped to fit time. Traps (13 sets vs 6 target) are in excellent shape.

Red flags this week:

1. Session 6 (Tue 19 May, 78 min logged): Only 1 set was recorded--20kg x 10 reps Shoulder Press. A 78-minute Push session yielding a single set means either the log is grossly incomplete or the session was abandoned immediately. Check Hevy, add any missing sets, or count it as a rest day. As logged, it contributes almost nothing to weekly volume (200 kg*reps from one set).
2. Triceps Pushdown weight drop: 60kg x 11 at Drona (Thu 14 May) vs 27.2kg x 11 at Cult (Sat 16 May)--a 55% drop between sessions. This is a cross-gym equipment difference (cable stack calibrations differ between gyms), not a strength collapse, but it means the Cult Triceps Pushdown needs its own progression baseline tracked separately from Drona.
3. Back-to-back-to-back days (Wed-Thu-Fri) with 24-25h rest and overlapping back activation in all three sessions. At age 44, three consecutive days on overlapping muscle groups is excessive; this pattern should not repeat.

Overall trend: Positive vs last week. Weekly volume rose 15% (46,591 vs 40,647 kg*reps)--the highest of the past three weeks. Key compound lifts improved: Deadlift (Trap bar) e1RM climbed 6.5kg to 123.5kg, Seated Cable Row hit 102.7kg, and Lat Pulldown reached a new high of 82.0kg. The 4-week volume peak (50,048

kg*reps, week of 22 Apr) indicates 8-10% further capacity exists on current form.

Direction is clearly positive.
