

This Week's Training Summary

Week 18 of PPL x2 · 20 Sep – 26 Sep 2026 · Generated 27 Sep 2026

HOW THIS WEEK WENT

4 of 6 sessions completed — volume exploded +218% vs last week (21,615 vs 6,804 kg·reps). Tuesday Pull A and Thursday Push B were missed for the 4th consecutive week. PPL slot adherence is 33%: only Mon (Push A) and Fri (Pull B) were on the correct day.

⚠ LOW

Lateral Raise (V-taper KPI) is trending UP — 12.5kg × 12 this week vs 10kg × 15 two weeks ago (+2.5kg weight). Love handles sit at lat-width level; every 1.25kg added here visually widens the shoulder cap relative to the waist. Keep this moving every Push session.

✓ UP

Hip Thrust absent from both legs sessions (0 of 2) — APT correction missed again. Dead Bug / Bird-Dog absent from all 4 sessions (0 of 4) — T8-T12 kyphosis work skipped every day. Rear delts: only 3 sets vs the 8-set weekly minimum. Uncorrected front-to-rear delt imbalance at 44 compresses the supraspinatus tendon — rotator cuff impingement precursor.

⚠ CRITICAL

Fri-Sat gap was only 22 hours — far below the 48h minimum recovery window at 44. Monday's session ran 102 min (42 min over cap) and Wednesday ran 73 min. Deload is 7 weeks overdue: 11 consecutive training weeks without one. Connective tissue fatigue accumulates invisibly.

⚠ FLAG

DO THIS NEXT WEEK (WEEK 19 — DELOAD)

- 1 Run a full deload: every session Monday–Saturday, 2 working sets per exercise (same weights). Keep all 6 days — deload is reduced volume, not a holiday. Wednesday Legs A and Saturday Legs B are mandatory this week after being mis-structured two weeks running.
- 2 Hip Thrust 60kg × 2 × 10 in BOTH Legs sessions (Wednesday Legs A and Saturday Legs B) — do it first in the session before fatigue. This is the primary APT corrective; two consecutive weeks without it is letting the pelvis tilt worsen under load.
- 3 Add Dead Bug 3 × 10 to every session this week — it costs 5 minutes and is the only intervention prescribed for the T8-T12 kyphosis. Also: Lateral Raise moves to 13.75kg × 12 on Monday Push A and Thursday Push B — the V-taper KPI is progressing, do not stall it.
