4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

* +-----+-----+-----+-----

Chest		18		12		-6		OK
Back		16		14		-2		OK
Shoulders		18		10		-8		OK
Traps		13		6		-7		OK
Rear Delts		7		8		1		LOW
Biceps		9		8		-1		OK
Triceps		9		8		-1		OK
Legs		27		14		-13		OK
Core		12		6		-6		OK

Push sets: 45 | Pull sets: 45 | Ratio pull:push = 1.00 (OK -- balanced)

Rear delts: 7 sets this week (need 8+/week)

SHORT by 1 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 13 sets this week (need 6+/week)

OK.

Enough work this week: Chest, Back, Shoulders, Traps, Biceps, Triceps, Legs, Core

Short this week : Rear Delts

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 6 of 5 target

Wk -3 (20 Apr-27 Apr): 6 sessions

Wk -2 (27 Apr-04 May): 5 sessions

Wk -1 (04 May-11 May): 5 sessions

Time between sessions this week:

Mon 11 May 08:26 -> Tue 12 May 08:15: 24h

Tue 12 May 08:15 -> Wed 13 May 08:17: 24h

Wed 13 May 08:17 -> Thu 14 May 08:13: 24h [FLAG: only 24h rest, same muscles: back]

Thu 14 May 08:13 -> Fri 15 May 08:52: 25h

Fri 15 May 08:52 -> Sat 16 May 10:11: 25h

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Wed 13 May + Thu 14 May (24h apart): overlap = back

Thu 14 May + Fri 15 May (25h apart): overlap = back, biceps

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	18	8	OK
Back	16	10	OK
Shoulders	18	8	OK
Traps	13	4	OK
Rear Delts	7	6	OK

Biceps	9	6	OK
Triceps	9	6	OK
Legs	27	10	OK
Core	12	4	OK

All muscle groups above minimum effective volume this week. Good.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 08 Jun 2026

7. KEY INSIGHTS

RECOVERY AT 44

At 44 years old, muscle tissue needs 48-72 hours to fully rebuild between sessions targeting the same muscle group. This week's data shows three consecutive days hitting back: Wed 13 May (Romanian Deadlift, a back-dominant compound), Thu 14 May (Upper Body Drona with Lat Pulldown, Rear Delt Fly, and direct back work), and Fri 15 May (Trap Bar Deadlift). These sessions were only 24-25h apart. On a calorie deficit, training an under-recovered muscle adds cumulative fatigue rather than new stimulus -- and at 44, recovery hormones (testosterone, IGF-1, HGH) are lower than at 25, making this more consequential. Rearranging sessions to place at least one full rest day between back-heavy workouts is the single highest-leverage scheduling fix available.

THE REAR DELT AND TRAP GAP

When front-chain muscles (chest, anterior deltoid, triceps) are significantly stronger than the rear-chain (rear delts, external rotators), the humeral head is pulled forward in the socket under load. Over years this causes impingement, rotator cuff fraying, and eventually structural damage -- the kind that needs surgery. The current numbers show rear delts at 7 sets this week against an 8-set target. While 1 set short sounds minor, it is a consistent shortfall that compounds over months. Traps are well above target (13 vs 6) so trap health is fine. The fix is simple: make Face Pulls and Rear Delt Fly the last non-negotiable sets of every Pull and Upper Body session before anything gets cut.

RED FLAGS THIS WEEK

1. Triceps Pushdown showed -44.8kg e1RM vs prior (37.2kg this week vs ~82kg in prior Upper Body sessions). This is not a strength regression -- it is two different exercises sharing the same name. The Cult sessions use a lighter cable attachment (27.2kg stack)

while the Drona Upper Body session uses a heavier cable. These should be logged separately in Hevy to prevent false regression alerts.

2. Cable Crunch: Set 1 logged at 35kg then dropped to 30kg for Sets 2 and 3 in the same session (Mon 11 May). A 14% mid-set weight drop suggests the first set was too heavy or the weight was misloaded. Keep at 30kg next session and build steadily.
3. Three consecutive back-heavy sessions (Wed-Thu-Fri) with only 24-25h gaps -- flagged again here as it is the most structurally significant issue in this week's data.

OVERALL TREND

Strongly positive. Volume this week is 50,673 kg*reps -- up 26% vs the previous week (40,120 kg*reps) and the highest of the 4-week window. Deadlift e1RM reached 123.5kg (up from 117kg the week prior, and 104kg four weeks ago) -- that is a 19kg improvement in 4 weeks on the most important compound movement. Push/pull balance is perfect at 1.00 this week. Nearly every compound lift showed e1RM progression. The programme is working.
