

This Week's Training Summary

28 Aug – 04 Sep 2026 · Week 15 of PPL x2 · Generated 2026-09-04

HOW THIS WEEK WENT

Only **1 session of 6** this week — a single 8-minute Full Body C on Friday. Volume crashed 53% to 4,372 kg·reps vs 9,332 last week. This is 15 weeks into the PPL programme and the old Full Body routine is still being used.

X CRITICAL

Bent Over Row reached **70 kg × 8 reps** across all 3 sets (e1RM 88.7 kg) — +2.4 kg e1RM vs prior best. The back is the one consistently trained muscle group. Next progression: 72.5 kg.

✓ OK

Lateral Raise (V-Taper KPI): DOWN this week — not performed at all. Last logged session was Mon 24 Aug at **10 kg × 15 reps** (prior week). The week before was 10 kg × 14 reps. Weight is stuck at 10 kg. Your love handles sit at lat-width level — the lateral delt shelf must widen visually to restore the V-ratio. Progression to 12 kg is the critical next step.

↓ DOWN

Corrective exercises: **0 Hip Thrusts and 0 Dead Bugs** logged in the entire 30-day period. Hip Thrust is mandatory for anterior pelvic tilt (APT) correction — the programme has been running 15 weeks without a single rep. Rear delts: only **3 valid sets** this week vs the 8-set weekly target — sustained shortfall raises rotator cuff risk at age 44.

X CRITICAL

DO THIS NEXT WEEK (W16 — DELOAD + PPL LAUNCH)

1

Switch to PPL this Monday. Start with Push A on Monday 07 Sep (Bench 2×8 @ 60 kg, OHP 2×8 @ 45 kg, Lateral Raise 2×12 @ 10 kg, Triceps Pushdown 2×11 @ 27.2 kg). It is a deload week so 2 sets per exercise, same weights — do all 6 sessions Mon–Sat.

2

Hip Thrust every Legs session, starting Wednesday Legs A. Load: 60 kg × 10 reps × 2 sets. Pause 1 second at full hip extension with glutes squeezed hard. This is your #1 APT corrective — it has been absent for 30+ logged days. Same again Saturday Legs B.

3

Add Dead Bug to every session and Face Pull to Friday Pull B. Dead Bug 3×10 at the end of every session (T8–T12 corrective — never logged in 30 days). Friday Pull B: add Face Pull 2×15 @ 15 kg to close the rear delt gap (currently 3 sets vs 8-set weekly target).
