4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group	Sets this wk	Target/wk	Gap	Status
Chest	12	12	0	OK
Back	13	14	1	LOW
Shoulders	10	10	0	OK
Traps	6	6	0	OK
Rear Delts	9	8	-1	OK
Biceps	5	8	3	LOW
Triceps	6	8	2	LOW
Legs	9	14	5	CRITICAL
Core	9	6	-3	OK

Push sets: 28 | Pull sets: 33 | Ratio pull:push = 1.18 (OK -- balanced)

Rear delts: 9 sets this week (need 8+/week)

OK -- shoulder balance maintained.

Traps : 6 sets this week (need 6+/week)

OK.

Enough work this week: Chest, Shoulders, Traps, Rear Delts, Core

Short this week : Back, Biceps, Triceps, Legs

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 4 of 5 target

Wk -3 (04 May-11 May): 6 sessions

Wk -2 (11 May-18 May): 6 sessions

Wk -1 (18 May-25 May): 2 sessions

Time between sessions this week:

Mon 25 May 08:12 -> Tue 26 May 10:14: 26h

Tue 26 May 10:14 -> Wed 27 May 08:37: 22h [FLAG: only 22h rest, same muscles: back, biceps, other, traps]

Wed 27 May 08:37 -> Thu 28 May 07:55: 23h [FLAG: only 23h rest, same muscles: back, core, other]

No sessions after midnight IST this week. Good.

Back-to-back sessions hitting the same muscle group:

Mon 25 May + Tue 26 May (26h apart): overlap = chest, other, rear_delts

Tue 26 May + Wed 27 May (22h apart): overlap = back, biceps, other, traps

Wed 27 May + Thu 28 May (23h apart): overlap = back, core, other

At age 44, muscles need 48-72h to fully repair between sessions.

Training a muscle before it has recovered adds fatigue, not stimulus, and raises injury risk. Rearrange sessions to respect the recovery window.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle This wk Min Status

Chest 12 8 OK

Back 13 10 OK

Shoulders 10 8 OK

Traps 6 4 OK

Rear Delts 9 6 OK

Biceps 5 6 AT RISK

Triceps 6 6 OK

Legs 9 10 AT RISK

Core 9 4 OK

Muscles at risk of loss this week (below minimum stimulus):

Biceps, Legs

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 22 Jun 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week : W1 (started 2026-05-24; 7 days elapsed)

Sessions this week : 4 of 6 target

Day	Expected	Detected	Status
Mon 25 May	Push A	Push A	OK
Tue 26 May	Pull A	Pull A	OK
Wed 27 May	Legs A	Legs A	OK
Thu 28 May	Push B	Push B	OK
Fri 29 May	Pull B	--	MISSED
Sat 30 May	Legs B	--	MISSED
Sun 31 May	REST	REST	OK

Adherence: 67% (4 of 6 sessions completed; all logged sessions matched correct PPL day)

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 1 -- MISSING on Wed 27 May (Legs A)

Core stabiliser (all sessions) : 4 of 4 sessions (Bird Dog logged every session)

Rear delt work in Pull sessions: 1 of 1 pull sessions (Face Pull 3 sets, Tue 26 May)

Sessions over 60 min : ALL 4 sessions exceeded the 60-min programme cap

Mon 25 May	84 min	Tue 26 May	118 min	Wed 27 May	122 min	Thu 28 May	103 min
------------	--------	------------	---------	------------	---------	------------	---------

LATERAL RAISE (V-TAPER KPI):

This week : 10kg x 15 reps (Thu 28 May)

Prior week: no data for 18-24 May; last available = 12.5kg x 13 reps (Sat 16 May)

Trend: DOWN (weight dropped 2.5kg from 12.5kg to 10kg)

7. KEY INSIGHTS

RECOVERY AT 44

Mon 25 May (Push A: chest/shoulders/triceps) -> Tue 26 May (Pull A: back/traps): 26h gap.

Different primary muscle groups -- no overlap issue here. But Tue 26 May (Pull A) hit back and traps via Pull Up (Weighted), Dumbbell Row, and Rack Pull. Wed 27 May (Legs A) then loaded the same back and traps with Deadlift (Trap bar) only 22h later -- a clear 48h violation. The same muscles were then partially stressed again when Thu 28 May (Push B) included Upright Row (cable, 23h after the Deadlift). Two back-to-back recovery violations on the same muscle group (back/traps) across Tue->Wed->Thu. At 44, where protein synthesis rates after training are measurably slower than in younger trainees, repeating load before the previous session has resolved is adding accumulated fatigue rather than a new growth signal. A simple fix: shift Legs A to Thursday and Push B to Friday so there is a clear day of separation for back between Pull A and the next back-loading session.

PPL ADHERENCE AND PROGRAMME AGE

This is Week 1 of the PPL x2 programme (started 2026-05-24). Adherence sits at 67% -- 4 of 6 sessions completed. All four logged sessions were on the correct PPL day, which is encouraging. The pattern driving the miss is clear: Mon-Tue-Wed-Thu done, then Friday (Pull B) and Saturday (Legs B) skipped. Two possible causes: fatigue accumulation from four consecutive days, or weekend scheduling. Worth noting that the programme deliberately spaces Push-Pull-Legs to allow recovery -- doing four consecutive days defeats part of that design. If consecutive fatigue is the cause, moving to a Mon/Wed/Fri + Tue/Thu/Sat pattern in Week 2 would distribute load better and remove the consecutive-day recovery violations described above.

CORRECTIVE COMPLIANCE

Hip Thrust hit rate this week: 0 of 1 Legs sessions. Hip Thrust is mandatory for anterior pelvic tilt (APT) correction. APT shortens the hip flexors and chronically under-activates the glutes; Hip Thrust is the direct counter-stimulus. One missed Legs session without it is one week without any corrective signal on the APT. Rear delt sets this week: 9 of 8 target -- technically met, but it is worth understanding why the target is hard-set at 8+. When the front-delt muscles (anterior deltoid, trained via OHP and lateral raise compensatory anterior loading) accumulate significantly more total volume than the rear delts and external rotators, the humeral head is pulled anteriorly in the joint socket during pressing movements. At 44, rotator cuff tendons have reduced collagen turnover capacity, so even modest impingement load over weeks can escalate to a tear that sidelines training entirely. 9 rear-delt sets this week is the minimum floor, not a target to stay exactly at. Core stabiliser presence: 4 of 4 sessions with Bird Dog -- good T8-T12 compliance.

LATERAL RAISE TREND -- V-TAPER KPI

This week: 10kg x 15 reps. Last available prior: 12.5kg x 13 reps (Sat 16 May). Trend: DOWN.

Weight has dropped 2.5kg. For Ganesh, whose love handles sit at approximately the same horizontal level as his current lat width, the visual V-taper ratio is controlled almost entirely by lateral

deltoid development. Wider delts make the waist look narrower without any change in actual waist circumference. A downward trend in lateral raise load means less mechanical tension on the medial deltoid head -- the exact fibre responsible for the width increase needed. The 10kg -> 12.5kg step is the priority progression in Week 2.

HARD FLAGS

1. Overhead Triceps Extension (Cable), Thu 28 May: Set 1 logged as 111 reps at 24kg. Actual was almost certainly 11 reps (data entry error -- extra digit). Fix logging immediately; the 112.8kg e1RM this generated is nonsensical and corrupts the trend data.
2. Single Leg Press (Machine), Wed 27 May: All 3 sets logged at 0kg. Actual machine resistance was not entered. Record the correct weight next session so progression can be tracked.
3. Session duration: All four sessions exceeded the 60-minute programme cap. Tue 26 May ran 118 min and Wed 27 May ran 122 min -- nearly double the limit. The warm-up and cool-down blocks (multiple Stretching entries, Dead Hang, Superman, Band Pullaparts, Warm Up) are consuming time that pushes the main work past the limit. Cap warm-up at 8-10 min and cool-down at 5 min.
4. Hip Thrust absent from Wed 27 May Legs A -- mandatory APT corrective not completed.
5. Rack Pull weight drop, Tue 26 May: Set 1 at 70kg x 5 reps, then Sets 2-3 dropped to 50kg -- a 29% weight reduction mid-exercise. Either the 70kg was too heavy for 3 sets or the intent was always 50kg with an exploratory first set. Clarify and standardise the working weight.

OVERALL VERDICT: HOLDING

Volume recovered strongly from the 2-session prior week (23,436 vs 8,025 kg*reps, +192%) and all logged sessions hit the correct PPL type on the correct day. However, the 6-session target was not met (4/6), all sessions overran the 60-min cap (some by nearly double), the single most important corrective exercise (Hip Thrust) was absent from the only Legs session, and the V-taper primary KPI (Lateral Raise weight) moved down rather than up. This is Week 1 of a new programme -- the structure is sound but execution needs tightening before declaring it an improving week.

8. PLAN FOR NEXT WEEK

Seated Incline Curl (Dumbbell) 3 sets x 10 reps @ 8.75kg

[was 7.5kg x 10 x 2; hit reps; isolation +1.25kg; complete 3 sets not 2]

Dead Bug 3 sets x 10 reps -- MANDATORY (T8-T12 kyphosis)

Watch-point: Rack Pull -- do not drop weight after Set 1. 70kg x 5 for all three sets, even if the last set is hard. This is the target to consolidate before adding weight.

[MISSING last week; restarting conservatively; do not substitute or skip]

Deadlift (Trap bar) 3 sets x 8 reps @ 95kg

[was 90/95/95 x 8; consolidate all 3 sets at 95kg before adding; +2.5kg next week if all hit]

Leg Press (Machine) 3 sets x 12 reps @ 72.5kg

[was 70kg x 12 x 3; all sets hit; compound +2.5kg]

Single Leg Press (Machine) 3 sets x 10 reps @ 20kg

[was 43kg x 9 x 3; all sets hit; isolation +1.25kg]

Dead Bug 3 sets x 16 reps -- MANDATORY (kyphosis + in session already)

Side Plank 3 sets x 30 sec per side

Watch-point: Hip Thrust is the reason this session exists on Wednesday. Do it first after warm-up, before fatigue builds. This session ran 122 min last week -- target 55-60 min; remove excess stretching sets.

THURSDAY -- Push B (Shoulders + Chest variation + Triceps)

Seated Overhead Press (DB) 4 sets x 10 reps @ 20kg

[was 17.5kg x 10 x 4; all sets hit; compound +2.5kg]

Lateral Raise (Dumbbell) 3 sets x 15 reps @ 11.25kg

[was 10kg x 15 x 3; all sets hit; isolation +1.25kg; if unavailable 12.5kg x 10 reps]

Upright Row (Cable) 3 sets x 10 reps @ 20.6kg

[was 18.1kg x 10 x 3; all sets hit; compound +2.5kg]

Face Pull 3 sets x 15 reps @ 26.2kg

[was 24.9kg x 15 x 3; all sets hit; isolation +1.25kg]

Chest Supported Y Raise (DB) 3 sets x 12 reps @ 6.25kg

[was 5kg x 12 x 3; all sets hit; isolation +1.25kg]

Overhead Triceps Ext (Cable) 3 sets x 11 reps @ 25.25kg

[was 24kg x 11 x 3 actual (Set 1 logged as 111 reps -- data entry error); isolation +1.25kg]

Bird Dog 3 sets x 10 reps -- MANDATORY (T8-T12 kyphosis)

Watch-point: Fix the rep logging for Overhead Triceps Extension -- Set 1 must be entered as 11, not 111. This corrupts e1RM and trend data each time it is wrong.

FRIDAY -- Pull B (Back + Rear Delts + Biceps)

[First Pull B session in PPL x2 -- conservative start weights]

Seated Cable Row (V Grip) 3 sets x 10 reps @ 70kg

[old programme best: 77kg May 18; conservative start after 2+ weeks off this pattern]

[last logged May 14 at 60kg x 11; maintain weight, target clean 10 reps]

Face Pull 3 sets x 15 reps @ 24.9kg -- MANDATORY rear delt

[same weight as this week; rear delt mandatory in every Pull session]

Rear Delt Reverse Fly (Machine) 3 sets x 10 reps @ 45kg

[old programme had 50kg; conservative start at 45kg first session in new plan]

Hammer Curl (Dumbbell) 3 sets x 8 reps @ 12.5kg

[old programme: 12.5kg x 9; conservative 8 reps first session]

Dead Bug 3 sets x 10 reps -- MANDATORY (T8-T12 kyphosis)

Watch-point: This session was MISSED last Friday. Completing Pull B is non-negotiable for the rear-delt 8-set/week target and rotator cuff health at 44. Schedule it and protect the time.

SATURDAY -- Legs B (Glutes, Hamstrings, Single-Leg, Rack Pull)

[First Legs B session in PPL x2 -- conservative start weights]

Hip Thrust (Machine) 3 sets x 12 reps @ 20kg -- MANDATORY APT CORRECTION

[must appear in every Legs session; do not skip]

Romanian Deadlift (Dumbbell) 3 sets x 10 reps @ 40kg

[last logged May 13 at 40kg x 11; maintain weight and focus on hamstring hinge form]

Leg Press (Machine) 3 sets x 12 reps @ 70kg

[conservative -- one step below Wed weight; second leg session of week]

Seated Leg Curl (Machine) 3 sets x 9 reps @ 43kg

[same weight as Wed; second session so do not progress -- consolidate]

Rack Pull 3 sets x 5 reps @ 70kg

[as per Tue Pull A plan; all sets at 70kg, no mid-set drop]

Dead Bug 3 sets x 10 reps -- MANDATORY (T8-T12 kyphosis)

Watch-point: This session was MISSED last Saturday. Two missed Legs B in a row would leave APT uncorrected and biceps femoris understimulated for two full weeks. Protect Saturday.
