

30-Day Analysis Report

Period ending 2026-08-02

ATHLETE PROFILE

Name: Ganesh

Profile: 44M | 181 cm | 87 kg -> 79 kg target

Goal: Body Recomposition -- fat loss with muscle preservation

Nutrition: 2,367 kcal/day | 174g protein/day

Generated: 2026-08-02

WEEKLY TRAINING REPORT

Generated : 2026-08-03 05:00 IST

User : Ganesh | 44M | 181cm | 87kg -> 79kg

This week : 27 Jul to 03 Aug 2026

1. THIS WEEK AT A GLANCE

Sessions : 0 of 5 target

Prior 3 weeks: 5, 4, 1 sessions (avg 3.3)

Overall score: 1/10 -- Below par -- low sessions or major muscle imbalances this week.

Biggest win : No working sets recorded this week

Biggest concern: Back -- 0 sets vs 14 target (14 sets short)

vs last week : Volume DOWN 100% (0 vs 1,920 kg*reps)

2. THIS WEEK -- SESSION BY SESSION

No sessions recorded this week.

4-WEEK VOLUME TREND

Wk -3 (06 Jul-13 Jul): [#####] 25,592 kg*reps 5 sess

Wk -2 (13 Jul-20 Jul): [#####...] 22,005 kg*reps 4 sess

Wk -1 (20 Jul-27 Jul): [#.....] 1,920 kg*reps 1 sess

This wk (27 Jul-03 Aug): [.....] 0 kg*reps 0 sess

3. STRENGTH -- HOW ARE THE LIFTS MOVING?

e1RM = estimated 1-rep max (formula: weight x (1 + reps / 30))

[C] = compound lift | [I] = isolation

4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

Chest | 0 | 12 | 12 | CRITICAL

Back | 0 | 14 | 14 | CRITICAL

Shoulders | 0 | 10 | 10 | CRITICAL

Traps | 0 | 6 | 6 | CRITICAL

Rear Delts | 0 | 8 | 8 | CRITICAL

Biceps | 0 | 8 | 8 | CRITICAL

Triceps | 0 | 8 | 8 | CRITICAL

Legs | 0 | 14 | 14 | CRITICAL

Core | 0 | 6 | 6 | CRITICAL

Push sets: 0 | Pull sets: 0 | Ratio pull:push = 0.00 (LOW -- add more pulling work)

Rear delts: 0 sets this week (need 8+/week)

SHORT by 8 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 0 sets this week (need 6+/week)

SHORT by 6 sets. Traps support neck and upper back posture. Add shrugs or deadlifts.

Short this week : Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 0 of 5 target

Wk -3 (06 Jul-13 Jul): 5 sessions

Wk -2 (13 Jul-20 Jul): 4 sessions

Wk -1 (20 Jul-27 Jul): 1 sessions

No sessions after midnight IST this week. Good.

No back-to-back same-muscle sessions this week. Good.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle This wk Min Status

Chest 0 8 AT RISK

Back 0 10 AT RISK

Shoulders 0 8 AT RISK

Traps 0 4 AT RISK

Rear Delts 0 6 AT RISK

Biceps 0 6 AT RISK

Triceps 0 6 AT RISK

Legs 0 10 AT RISK

Core 0 4 AT RISK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Back, Shoulders, Traps, Rear Delts, Biceps, Triceps, Legs, Core

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 3

Weeks since last deload : 3 (deload every 4 weeks)

Next deload : in 1 week(s), approx 10 Aug 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week: W10 (started 2026-05-24; 70 days elapsed; 10 weeks)

Sessions this week: 0 of 6 target

Day | Expected | Detected | Status

Mon 27 Jul | Push A | -- | MISSED

Tue 28 Jul | Pull A | -- | MISSED

Wed 29 Jul | Legs A | -- | MISSED

Thu 30 Jul | Push B | -- | MISSED

Fri 31 Jul | Pull B | -- | MISSED

Sat 01 Aug | Legs B | -- | MISSED

Sun 02 Aug | REST | -- | OK (rest day)

Adherence: 0% (0 of 6 training sessions completed this week)

NOTE: None of the 11 sessions in the 30-day log carry PPL titles.

All sessions are labelled "Full Body A/B/C" or "Chest Shoulder -- Saturday".

The PPL x2 split has not been adopted in the training data after 10 weeks.

The correct weekly target is 6 sessions (not 5 as shown in sections 1-6).

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : N/A -- 0 legs sessions this week

ALERT: Hip Thrust absent from ALL 11 sessions

in the 30-day log. APT correction = 0 occurrences.

Core stabiliser (all sessions): 0 of 0 sessions this week

ALERT: Dead Bug and Bird-Dog absent from all

30-day logs. Core work (Crunch, Hanging Leg Raise)

is present but T8-T12 corrective exercises = 0.

Rear delt work in Pull sessions: N/A -- 0 pull sessions this week

NOTE: Rear Delt Reverse Fly logged 3 x in 30 days

(Fri 03 Jul 3 sets, Fri 10 Jul 3 sets, Fri 17 Jul

2 sets = 8 sets in 4 weeks; weekly target is 8 sets.

Average delivery: 2 sets/week -- 25% of target).

Sessions over 60 min : None this week (0 sessions logged).

NOTE last 30 days: 8 of 11 sessions exceeded 60 min:

Mon 06 Jul 97 min, Mon 13 Jul 93 min, Wed 15 Jul 93 min,

Sat 18 Jul 86 min, Sat 04 Jul 78 min, Fri 10 Jul 75 min,

Fri 17 Jul 70 min, Fri 03 Jul 65 min.

LATERAL RAISE (V-TAPER KPI):

This week : No data -- 0 sessions logged 27 Jul-02 Aug

Prior week : No data -- only session (Mon 20 Jul, 16 min) had no Lateral Raise

Last logged: Mon 13 Jul -- 10kg x 14 reps (3 sets)

Prior to : Mon 06 Jul -- 10kg x 13 reps (3 sets)

Trend (last 2 logged data points): UP (+1 rep week-on-week)

WARNING: Lateral Raise absent for 3 consecutive weeks. V-taper KPI is STALE.

7. KEY INSIGHTS

RECOVERY AT 44 -- SAME-MUSCLE GAP ANALYSIS

The only confirmed 48h recovery breach in the 30-day log is the Fri-Sat pair:

Session 9 (Fri 17 Jul, 08:55) to Session 10 (Sat 18 Jul, 08:12) -- a gap of

23h 17min. Session 9 included Rear Delt Reverse Fly (rear-shoulder stabilisers)

plus a conventional Deadlift at 80kg (spinal erectors and traps). Session 10 went

straight into Seated Shoulder Press at 90kg x 8 reps -- a direct shoulder reload

within 24 hours. At age 44, soft-tissue repair (tendons, rotator cuff) is slower

than at 25; under-recovered shoulder stabilisers under a 90kg press load is where

impingement begins. A secondary near-miss: Session 3 (Mon 06 Jul, 08:26) to

Session 4 (Wed 08 Jul, 08:06) = 47h 40min, just 20 minutes short of 48h, with

Back (Pull Up then RDL) and Legs (Squat then Leg Extension) both overlapping.

All other session pairs cleared 48h without issue.

PPL ADHERENCE AND PROGRAMME AGE

This is Programme Week 10 (started 24 May 2026). Adherence this week: 0% (0 of 6 sessions). The prior three weeks: 5 sessions, 4 sessions, 1 session, 0 sessions -- a step-down collapse over four consecutive weeks. Missed days cluster entirely on Tuesday (Pull A) and Thursday (Push B): these two slots have never been used across all 11 logged sessions. The Mon/Wed/Fri/Sat pattern is the old Full Body split, not PPL. More critically, the PPL split itself has not been implemented -- every session in the 30-day log is titled "Full Body A/B/C" or "Chest Shoulder." After 10 weeks, zero PPL sessions have been logged.

CORRECTIVE COMPLIANCE

Hip Thrust (APT correction) hit rate: 0% -- never logged across 11 sessions in 30 days. Anterior pelvic tilt keeps the hip flexors in chronic tension and inhibits the glutes. Without Hip Thrust activating the glutes, every squat and deadlift is compensated by the lumbar extensors and quads. Over time under load, this pattern compresses the lumbar discs and will eventually present as lower-back pain at the base of the movement. Hip Thrust is not optional.

Rear delt sets this week: 0. Past 30 days: 8 sets total across 3 sessions vs the 8-sets-per-week target. That is 2 rear delt sets per week on average -- one quarter of the target. If anterior deltoid and pec major remain disproportionately stronger than the posterior deltoid and rotator cuff, the humeral head migrates forward in the socket under load. This narrows the subacromial space and grinds the supraspinatus tendon on the acromion during any overhead or lateral movement. At 44, rotator cuff tendinopathy is slow to heal (6-12 months of physio) and entirely preventable with Face Pulls and Rear Delt Fly performed weekly.

Dead Bug / Bird-Dog (T8-T12 kyphosis): 0 appearances in 30 days. Without firing the transversus abdominis and multifidus each session, the lower thoracic spine loads asymmetrically during every compound lift -- amplifying the existing kyphotic curve at T8-T12. Core sets are present (Crunch, Hanging Leg Raise) but these target rectus abdominis, not the deep spinal stabilisers. They do not substitute.

LATERAL RAISE TREND -- V-TAPER KPI

Lateral Raise has not appeared since 13 July 2026 -- three weeks absent. The last two logged sessions showed progress: 10kg x 13 reps (06 Jul) rising to 10kg x 14 reps (13 Jul), a trajectory that was working. The exercise was then dropped from the aborted session on 20 Jul and has not reappeared. For Ganesh specifically, the love handles currently sit at lat-width level, collapsing the shoulder-to-waist ratio. Lateral raises grow the medial deltoid, which is the only muscle that creates visible shoulder width above the lat flare. Every week the exercise is absent, the V-taper gap widens relative to the recomposition goal.

HARD FLAGS

1. SESSION 11 ABORT (Mon 20 Jul, 16 min): Squat dropped from 80kg to 40kg and Bench dropped from 65kg to 40kg vs the week prior. Session lasted 16 minutes and ended after 7 sets. This is either injury, illness, or an abandoned start.

The cause is unknown and must be clarified before loading heavy compounds next week.

2. COMPLETE WEEK OFF (27 Jul-02 Aug): 0 sessions in a 6-target week. Combined with the near-empty prior week (1 session in 17-26 Jul), only 1 session in the past 17 days. Every muscle group is below minimum stimulus for retention on a deficit.

3. CORRECTIVE EXERCISES NEVER DONE: Hip Thrust (APT mandatory) and Dead Bug/Bird-Dog (T8-T12 mandatory) have zero logged instances across the entire 30-day record.

4. FRI-SAT DOUBLE (17-18 Jul): 23h 17min gap with shoulder involvement on both sides.

The only confirmed 48h recovery violation in the dataset.

5. SESSIONS CONSISTENTLY OVER 60 MIN: 8 of 11 sessions exceeded the 60-min cap

(range: 65 to 97 min). The 97-min session on Mon 06 Jul is 62% over target.

Warm-up and accessory sequencing needs restructuring.

OVERALL VERDICT: DECLINING

Volume: 0 kg*reps this week vs 1,920 (W9) vs 22,005 (W8) vs 25,592 (W7).

Adherence: 0% this week vs 17% (W9) vs 67% (W8) vs 83% (W7).

Strength: no new data; last session (20 Jul) showed weight regression.

Corrective compliance: 0% on Hip Thrust and Dead Bug/Bird-Dog across all 30 days.

All four metrics are declining uniformly over the last four weeks.

8. PLAN FOR NEXT WEEK

Programme week: W11 (Week 11 of PPL x2 -- first full PPL implementation week)

Deload note: Per 4-week protocol, W11 is technically the deload window (3 active training weeks logged). However, W9 (1 session) and W10 (0 sessions) provided passive recovery equivalent to a deload. Train at full intensity in W11. Adjust down 10% on any movement that feels compromised after the 17-day layoff.

Next formal deload: Week 15, approx 30 Aug 2026.

Weight note: All weights are based on best logged set prior to the layoff gap.

If any compound feels shaky in the first set, drop 5% and rebuild next week.

MONDAY -- Push A (Chest primary + Shoulders + Triceps)

Bench Press (Barbell) 3 x 6 @ 67.5kg

[last: 65kg x 7 all 3 sets, 13 Jul -- compound, all sets hit target; +2.5kg]

Incline Chest Press (Machine) 3 x 10 @ 31.25kg

[last: 30kg x 11 all 3 sets, 18 Jul -- isolation, all sets hit; +1.25kg]

Chest Fly (Machine) 3 x 10 @ 66.25kg

[last: 65kg x 10 all 3 sets, 18 Jul -- isolation, all sets hit; +1.25kg]

Lateral Raise (Dumbbell) 3 x 10 @ 11.25kg << V-TAPER KPI -- do not skip

[last: 10kg x 14 all 3 sets, 13 Jul -- isolation, all sets hit; +1.25kg]

Triceps Pushdown 3 x 10 @ 28.5kg

[last: 27.2kg x 11 all 3 sets, 15 Jul -- isolation, +1.25kg]

Dead Bug 3 x 10 -- DO NOT SKIP (T8-T12 kyphosis corrective)

Key focus: First session back after 17 days. Lateral Raise must be logged -- this is the V-taper KPI and it has been absent for 3 weeks.

TUESDAY -- Pull A (Back compound + Biceps)

Bent Over Row (Barbell) 3 x 6 @ 72.5kg

[last: 70kg x 7 all 3 sets, 17 Jul -- compound, all sets hit target; +2.5kg]

Pull Up (Bodyweight) 3 x 6

[last: 6 reps per set, 13 Jul -- hold; attempt 7 reps on each set]

Rear Delt Reverse Fly (Dumbbell) 3 x 13 @ 11.25kg

[last: 10kg x 13 all sets, 17 Jul -- isolation, all sets hit; +1.25kg]

Bicep Curl (Machine) 3 x 10 @ 26.25kg

[last: 25kg x 10 all 3 sets, 18 Jul -- isolation, all sets hit; +1.25kg]

Bird-Dog 3 x 10 each side -- DO NOT SKIP (T8-T12 corrective)

Key focus: Rear Delt Reverse Fly must be logged. This is rear delt contribution

day 1 of 2 for the week. Rotator cuff health depends on it at 44.

WEDNESDAY -- Legs A (Quads + Hamstrings + Glutes -- Hip Thrust mandatory)

Hip Thrust (Barbell) 3 x 10 @ 60kg << MANDATORY (APT corrective)

[no prior history -- conservative start; do 1 bodyweight set first to learn the movement, then 60kg; add 5kg per session as long as form holds]

Squat (Barbell) 4 x 6 @ 80kg

[last: 80kg x 5 reps, 13 Jul -- compound, did not reach 6 reps; hold weight]

Romanian Deadlift (Barbell) 3 x 8 @ 77.5kg

[last: 75kg x 8 all 3 sets, 15 Jul -- compound, all sets hit; +2.5kg]

Leg Extension (Machine) 3 x 10 @ 78.25kg

[last: 77kg x 10 all 3 sets, 15 Jul -- isolation, all sets hit; +1.25kg]

Dead Bug 3 x 10 -- DO NOT SKIP (T8-T12 corrective)

Key focus: Hip Thrust is the single most important exercise this session.

APT has never been addressed in the training log. If glutes are not activating under the bar, the lumbar spine is carrying load it should not.

THURSDAY -- Push B (Shoulders primary + Chest variation + Triceps)

Seated Shoulder Press (Machine) 3 x 8 @ 92.5kg

[last: 90kg x 8 all 3 sets, 18 Jul -- compound, all sets hit; +2.5kg]

Overhead Press (Barbell) 3 x 6 @ 50kg

[last: 47.25kg x 6 all 3 sets, 15 Jul -- compound, all sets hit 6 reps; +2.5kg rounded to 50kg]

Chest Fly (Machine) 3 x 10 @ 65kg (chest variation in Push B)

[last: 65kg x 10 all sets, 18 Jul -- hold weight; focus on slow eccentric]

Skullcrusher (Dumbbell) 3 x 12 @ 21.25kg

[last: 20kg x 12 all 3 sets, 18 Jul -- isolation, all sets hit; +1.25kg]

Dead Bug 3 x 10 -- DO NOT SKIP

Key focus: OHP at 50kg is a jump from 47.25kg. If the first set fails reps, drop back to 47.5kg. Do not sacrifice shoulder press form for an extra 2.5kg.

FRIDAY -- Pull B (Back + Rear Delts + Biceps -- Rear Delt Fly mandatory)

Deadlift (Barbell) 3 x 6 @ 82.5kg

[last: 80kg x 7 all 3 sets, 17 Jul -- compound, all sets hit; +2.5kg]

Bent Over Row (Barbell) 3 x 6 @ 72.5kg

[same as Pull A -- two back sessions per week is the PPL structure]

Shrug (Barbell) 3 x 12 @ 70kg

[last: 70kg x 12/11/11, 17 Jul -- not all sets hit 12 reps; hold weight]

Rear Delt Reverse Fly (Dumbbell) 3 x 13 @ 11.25kg << MANDATORY rear delt

[same prescription as Tuesday; this is rear delt session 2 of 2 this week]

Bicep Curl (Machine) 3 x 10 @ 26.25kg

Bird-Dog 3 x 10 each side -- DO NOT SKIP

Key focus: Rear Delt Fly on both Tue and Fri delivers 6 sets of rear delt work.

Add a 4th set on each day if time allows to reach the 8-set weekly target.

Deadlift at 82.5kg is the week's heaviest compound -- warm up thoroughly.

SATURDAY -- Legs B (Glutes + Hamstrings + Single-Leg -- Hip Thrust mandatory)

Hip Thrust (Barbell) 3 x 10 @ 65kg << MANDATORY (APT corrective)

[+5kg from Wednesday if Wed session felt controlled; otherwise repeat 60kg]

Romanian Deadlift (Barbell) 3 x 8 @ 77.5kg

[same as Legs A; hamstring and posterior chain focus on Legs B]

Bulgarian Split Squat (Dumbbell) 3 x 8 each leg @ 20kg per hand

[no prior history -- conservative start for single-leg stability]

Leg Extension (Machine) 3 x 10 @ 78.25kg

Dead Bug 3 x 10 -- DO NOT SKIP

Key focus: Second Hip Thrust session of the week. By Saturday form should be sharper than Wednesday. Bulgarian Split Squat is new -- focus on balance and depth before adding load.

+-----+	
Deload : not yet -- next due Week 15, approx 30 Aug 2026	
Timing : 6-9 PM IST -- no sessions after midnight	
Nutrition: 2,367 kcal/day 174g protein minimum	
+-----+
