4. ARE THE RIGHT MUSCLES GETTING ENOUGH WORK?

Muscle Group | Sets this wk | Target/wk | Gap | Status

-----+-----+-----+-----+-----					
Chest		6		12	6 CRITICAL
Back		13		14	1 LOW
Shoulders		6		10	4 CRITICAL
Traps		7		6	-1 OK
Rear Delts		0		8	8 CRITICAL
Biceps		3		8	5 CRITICAL
Triceps		6		8	2 LOW
Legs		14		14	0 OK
Core		5		6	1 LOW

Push sets: 18 | Pull sets: 23 | Ratio pull:push = 1.28 (OK -- balanced)

Rear delts: 0 sets this week (need 8+/week)

SHORT by 8 sets. Rear delts stabilise the shoulder joint. If front shoulder muscles stay much stronger than rear, you risk rotator cuff problems over time. Add face pulls or reverse flys.

Traps : 7 sets this week (need 6+/week)

OK.

Enough work this week: Traps, Legs

Short this week : Chest, Back, Shoulders, Rear Delts, Biceps, Triceps, Core

Under-trained muscles lose size first on a calorie deficit. Prioritise these next session.

5. REST AND RECOVERY THIS WEEK

Sessions this week : 3 of 5 target

Wk -3 (15 May-22 May): 6 sessions

Wk -2 (22 May-29 May): 4 sessions

Wk -1 (29 May-05 Jun): 2 sessions

Time between sessions this week:

Fri 05 Jun 08:02 -> Mon 08 Jun 08:13: 72h

Mon 08 Jun 08:13 -> Wed 10 Jun 08:27: 48h

No sessions after midnight IST this week. Good.

No back-to-back same-muscle sessions this week. Good.

6. BODY RECOMPOSITION CHECK

Calorie target : 2367 kcal/day

TDEE estimate : 2784 kcal/day (your estimated daily burn at current weight)

Daily deficit : 417 kcal (15% cut -- sustainable rate for muscle retention)

Protein target : 174g/day (2g per kg bodyweight)

WHY PROTEIN MATTERS ON A CUT:

In a calorie deficit, the body looks for extra fuel. If protein is low, it breaks down muscle tissue for energy -- this is called muscle catabolism. At 174g/day, you supply enough amino acids to maintain muscle while losing fat. Going below ~120g/day on this deficit risks losing the muscle you are training to build.

MUSCLE STIMULUS CHECK (minimum sets/week to retain muscle on a calorie deficit):

Muscle	This wk	Min	Status
Chest	6	8	AT RISK
Back	13	10	OK
Shoulders	6	8	AT RISK
Traps	7	4	OK
Rear Delts	0	6	AT RISK
Biceps	3	6	AT RISK
Triceps	6	6	OK
Legs	14	10	OK
Core	5	4	OK

Muscles at risk of loss this week (below minimum stimulus):

Chest, Shoulders, Rear Delts, Biceps

These are not getting enough signal to hold on to muscle during a deficit.

Add sets for these in the next 1-2 sessions.

Active training weeks logged : 1

Weeks since last deload : 1 (deload every 4 weeks)

Next deload : in 3 week(s), approx 03 Jul 2026

6.5. PPL ADHERENCE & CORRECTIVE COMPLIANCE

Programme week: W3 (started 2026-05-24; 18 days elapsed, ceil(18/7) = 3)

Sessions this week: 3 of 6 target

Day	Expected	Detected	Status
Fri 05 Jun	Pull B	INFERRED: Full Body	OFF-PLAN

Sat 06 Jun | Legs B | (no session) | MISSED
 Sun 07 Jun | REST | REST | OK
 Mon 08 Jun | Push A | INFERRED: Full Body A | OFF-PLAN
 Tue 09 Jun | Pull A | (no session) | MISSED
 Wed 10 Jun | Legs A | INFERRED: Full Body B | OFF-PLAN
 Thu 11 Jun | Push B | (no session) | MISSED

Adherence: 0% (0 of 3 sessions matched correct PPL session type)
 All three sessions were logged under Full Body format. Inferred session types based on exercises: RDL+Row+Bench+Triceps (Full Body), Squat+Bench+PullUp+LateralRaise (Full Body A), RDL+OHP+LegExt+BicepCurl+Triceps (Full Body B) -- none match the required PPL session type for that day of week.

CORRECTIVE MARKERS:

Hip Thrust in Legs sessions : 0 of 0 PPL Legs sessions this week
 (0 of 1 total PPL Legs A sessions in programme --
 APT corrective MISSING since 13 May, 4 weeks absent)
 Core stabiliser (all sessions): 0 of 3 sessions [Dead Bug / Bird-Dog absent from all]
 Rear delt work in Pull sessions: 0 of 0 Pull sessions this week (0 rear delt sets total)
 Sessions over 60 min: ALL 3 sessions exceeded the 60-min target
 Fri 05 Jun Full Body 3 : 98 min (+38 min over cap)
 Mon 08 Jun Full Body A : 71 min (+11 min over cap)
 Wed 10 Jun Full Body B : 65 min (+ 5 min over cap)

LATERAL RAISE (V-TAPER KPI):

This week : 10kg x 12 reps | Prior week: N/A -- no sets logged (29 May-4 Jun)
 Last best : 10kg x 15 reps (Thu 28 May, PPL Push B)
 Trend: DOWN (same weight, 3 fewer reps vs last logged session)

7. KEY INSIGHTS

RECOVERY AT 44

This week had two session pairs: Fri 05 Jun 08:02 -> Mon 08 Jun 08:13 (72h gap) and Mon 08 Jun 08:13 -> Wed 10 Jun 08:27 (48h gap exactly). Both clear the 48h minimum on paper. However, the Mon-Wed pair is borderline: squats hit the legs on Monday and Romanian Deadlift plus Leg Extension hit them again on Wednesday at exactly 48h -- no buffer above the minimum. At 44, with lower protein synthesis rates than a 25-year-old, a 48h gap for the same muscle group leaves the body at the edge of adequate recovery, not comfortably past it. The 72h Fri-Mon pair was genuinely adequate. The tighter pair should be extended to 60-72h in future programming.

PPL ADHERENCE AND PROGRAMME AGE

This week's PPL session-type adherence is 0% -- all 3 sessions were Full Body format.

Of 6 required training days (Mon-Sat), only 3 were used. The consistently skipped days this week are Saturday (Legs B), Tuesday (Pull A), and Thursday (Push B). Saturday has been missed in the prior two weeks as well, suggesting a consistent scheduling gap on that day. We are now in Programme Week 3 (started 2026-05-24). The PPL format was followed correctly in W1 (Mon 25 - Thu 28 May) with 4 PPL-typed sessions, but has not been repeated since. Each week that passes in Full Body format delays the specialisation benefits of PPL x2 -- the chest-primary, shoulder-primary, and leg-specific session structure exists precisely to accumulate enough targeted sets per muscle group per week.

CORRECTIVE COMPLIANCE

Hip Thrust hit rate: 0 of 0 PPL Legs sessions this week, and 0 of 1 total PPL Legs sessions in the programme (May 27 Legs A had no Hip Thrust either). The APT corrective has been absent for 4 weeks. Without hip thrusts, the glutes are not being loaded through full hip extension under tension, and anterior pelvic tilt continues uncorrected -- this places chronic compressive load on the lumbar spine during squats and deadlifts. Rear delt total this week: 0 sets vs 8-set weekly target. In plain terms: every pressing session hammers the anterior deltoid, but the posterior rotator cuff (infraspinatus, teres minor, posterior deltoid) receives no training signal. Over time this anterior dominance pulls the humeral head forward in the socket. At 44, with reduced tendon elasticity, sustained anterior overload raises the risk of subacromial impingement -- pain and loss of range on overhead pressing, which is already a compound KPI. Core stabiliser (Dead Bug or Bird-Dog) was logged in 0 of 3 sessions this week, down from 4 of 4 sessions in PPL Week 1. The T8-T12 kyphosis corrective has been dropped entirely since reverting to Full Body format.

LATERAL RAISE TREND -- V-TAPER KPI

This week: 10kg x 12 reps (Mon 08 Jun). Last logged best: 10kg x 15 reps (Thu 28 May PPL Push B). Trend is DOWN -- same weight, 3 fewer reps, meaning less training volume and a weaker stimulus to the medial deltoid. This matters specifically because Ganesh's love handles sit at lat-width level, collapsing the shoulder-to-waist visual ratio. The medial deltoid is the only muscle that can push the shoulder silhouette wider than the love handle line. A declining rep count at 10kg means the V-taper KPI is moving backward, not forward. The target is a consistent 12.5kg x 12 reps before end of W4.

HARD FLAGS FROM SESSION DATA

Flag 1: Rep collapse -- Incline Bench Press dropped 12 reps to 8 reps across sets on Fri 05 Jun (3-set average collapsed 33%). Next session reduce to 17.5kg x 12.

Flag 2: Rep collapse -- Hanging Leg Raise fell from 8 reps to 4 reps on Mon 08 Jun; session note confirms low energy and fatigue. A session entered in depleted state.

Flag 3: All 3 sessions over 60 min (98, 71, 65 min). At a 417 kcal daily deficit, sessions running 65-98 min drive cortisol elevation, which accelerates muscle protein breakdown. Keep sessions at 55-60 min by trimming warm-up volume or dropping 1 set.

Flag 4: No Hip Thrust in any session (4 consecutive weeks). APT correction has stalled.

Flag 5: Zero rear delt sets for the second consecutive full-body week. Rotator cuff

imbalance is accumulating -- this is the highest-priority corrective gap in the log.

OVERALL VERDICT: HOLDING

Volume rose 16% vs last week (12,306 vs 10,652 kg*reps). Attendance improved (3 vs 2 sessions). Bench Press is at 60kg and Squat at 65kg, both up from the prior week. These are genuine positives. However, PPL adherence remains 0% (same as last week), corrective compliance is 0% (same as last week), rear delt volume is 0 (same as last week), and the V-taper KPI is down. The programme regression from PPL to Full Body has now held for two weeks. A third consecutive Full Body week will push the verdict to DECLINING.

[All 3 sets at 60kg -- build consistency before progressing to 62.5kg]

Incline Bench Press (Dumbbell) 3 x 12 @ 17.5kg

[Dropped from 20kg -- rep collapse (12->8) flagged on 05 Jun]

Chest Fly (Machine) 3 x 12 @ 47.5kg

[Prior PPL Push A was 45kg x12 x3; all sets hit; +2.5kg]

Lateral Raise (Dumbbell) 3 x 12 @ 12.5kg *** V-TAPER KPI ***

[Up from 10kg -- all 3 sets hit 12 reps on Mon 08 Jun; isolation +1.25kg -> nearest DB 12.5kg]

Dead Bug 3 x 10 -- MANDATORY (T8-T12 kyphosis corrective)

Session focus: Lateral Raise at 12.5kg is the V-taper KPI this session. Bench at 60kg is consolidation, not progression -- 3 consistent sets before adding weight.

[APT corrective absent 4 weeks -- do this FIRST, before squats]

Squat (Barbell) 4 x 5 @ 65kg

[Best working sets 65kg x5 on Mon 08 Jun -- consolidate at 65kg for 4 sets]

Leg Press (Machine) 3 x 12 @ 72.5kg

[Prior best 60kg x12x4 (14 May) -- chest variation for Push B]

Lateral Raise (Dumbbell) 3 x 12 @ 12.5kg *** V-TAPER KPI ***

[Second lateral raise session this week -- critical to hit 12.5kg again]

Face Pull 3 x 15 @ 24.9kg

[Mandatory rear delt -- Push B supplement to reach 8-set weekly target]
